2017 NFL Draft Analytics Guide

Data Profiles

This is a collection of data based profiles on most of the 2017 NFL Draft prospects. Innovative data techniques mixed with some old-school trait scouting. Form the backbone of the most comprehensive draft guide out there. Instead of finding out how an NFL evaluator feels about the class. Get the facts and opinions to form your own conclusions about the future of these prospects and the NFL.

2017 NFL Draft Analytics Guide

Data Profiles

Welcome and thank you for your purchase. My name is James Cobern, and you are about to witness again, the future of prospect evaluation.
For the last four years, I have gathered thousands of data and committed to countless hours of analysis to produce this document before you. With two goals in mind:

- Educate about the variables that affect NFL performance
- And teach what it takes to be an elite player in the NFL.

With those goals in mind I collected numerous variables including decades' worth of age, production, and strength of schedule data to form the foundation of the most comprehensive NFL Draft guide ever. In addition to months of film evaluations leading up to the draft as well.

It is at the intersection of film and data where the future of prospect evaluation is heading. And those who propagate new techniques vs. old will hold the keys to the future of NFL analysis.

No longer can we rely solely on the opinion of NFL evaluators. Opinions influenced by their own personal biases and flaws.

It is through data that we will not only learn from an objective standpoint what makes a NFL player great. But it will also provide the tools necessary to improve NFL evaluation into the future.

How to use this guide?

1. Supplement your current NFL draft prospect evaluation process.
2. Learn about new methods in prospect evaluation.
3. Learn about the significance these new methods have on future success outcomes.
4. Improve your own process in draft evaluation.
5. Come away with information to understand and debate the true limits of data.
6. Discover new ideas and concepts to improve upon the tested variables in this guide.

QB

Quarterback is one the hardest positions to scout in football. But it can be easier to scout when you apply a data approach to your film evaluation. Examining the data traits or commonalities between great to good quarterbacks should be treated with the same vigor and enthusiasm as traits on tape. But what kinds of data are good for quarterback evaluation? Well the most controversial and mainstream form of data at the quarterback position is the Wonderlic.

A test commonly used by corporations to determine the intelligence of their employees. And while there are certainly some interesting patterns to the Wonderlic data. The amount of missing information online with regards to the Wonderlic dating back to the 70s, 80s and even 90s makes providing a way to test the results almost impossible. Everyone wants to bring up what Dan Marino's Wonderlic was, but we don't even know what Joe Montana's was. Most of the Wonderlic scores on quarterbacks in the 70s to 90s are only from the most successful.

I can certainly show you the correlations to quarterback success from late 90s to today, but without sufficient additional tests in the 70s to 90s. I can't feel confident in the conclusions I can make from said data. Let alone personality test data that only NFL teams have access to. The prospect of personality tests would be an intriguing area to investigate. But it's hard to cherry pick data from a tree that doesn't exist.

No, the only data that has shown significant results with quarterbacks. In addition to having a large enough sample to test multiple eras of football are statistics. But not just plain Jane statistics, as the evolution of football has made comparing statistics from different eras fruitless. However, if you test the data with 10-year sample size for each quarterback performance. You can see who performed the best compared to the peers of their era.

Essentially comparing Peyton Manning to Tom Brady. Instead of Peyton Manning to Joe Montana. Which is exactly what I did for what I have dubbed the Complete QB Stat. I took thousands of quarterback statistical performances and scored each with a 10-year sample. Whether it was the TD/INT ratio, completition percentage, QB rating, yard per attempt and adjusted yards per attempt. The common theme was in the TD/INT ratio and completion percentage had the highest correlations to success outcomes.

But that left me with another problem. Strength of schedule. A quarterback playing a very weak strength of competition in any era will almost always put up great or very good looking stats. So, there must be a buffer put in to see how well a quarterback performed relative to their competition.

Luckily, there has already been a strength of schedule score formulated from College Football reference. So, I rank every SOS score from 1958 to 2016.

And added those corresponding scores to the other 10-year sample scores giving the final product known as the Complete QB Stat. A comprehensive score that tells you how well they performed against their peers in addition to how they performed relative to their strength of competition. And the results speak for themselves. All multiple All-Pro quarterbacks since the 1958 NFL Draft class had a Complete QB Stat score of 90 or higher except for Brett Favre. While all multiple Pro Bowl quarterbacks in that same period had a QB Stat score of 80 or higher except for Michael Vick and Matt Hasselbeck.

Long-term starters were found anywhere from as low as a 26 or higher. But all quarterbacks with a below average score needed significant development prior to seeing the field. Whether it was in NFL Europe like Jake Delhomme, or sideline development with Matt Hasselbeck. Proving that quarterbacks can be developed from humble beginnings. However, betting your coaching livelihood on that development is not something I'd recommend.

Now this doesn't mean that every quarterback who scores high on the Complete QB Stat will be an All-Star. Very little data work is throwing numbers into a pot and getting a solid list of Hall of Famers. But it's clear that this data can be helpful in identifying quarterbacks who could have higher successful outcomes. In fact, Dak Prescott and Cody Kessler both performed very well in Complete QB Stat last year. The jury is still out on Kessler and Prescott, but both were NFL starters last year, while conventional scouting methods had them evaluated as backups at best.

But that still doesn't account for Jared Goff. He performed well in Complete QB Stat last year as well. And started last year with less than Kessler, or even Prescott like impact I'm afraid. However, this is where the High School Production comes into focus. Controversial as it has been received.

Similar correlations to success were found with HS Football data as were found with FBS Football data. With a sample of thousands of High School football performances from 2004-2016 looking exclusively at TD/INT ratio and completition percentage. Every single long-term starting quarterback over that time span had a High School production score (TD/INT ratio score plus Completition Percentage normalized against 6,000+ peers) of 69 or higher. While every single Pro Bowl quarterback in that time span had a score of 84 or higher. Dak Prescott and Cody Kessler both met the 84 or higher HS production threshold.

Jared Goff on the other hand didn't even meet the starter level threshold of 69. And just like FBS data, not every high performing High School quarterback will become a superstar. But at least in the last 10+ years, every single high performing quarterback in the NFL was a high performer in college and high school. Making metrics like the Complete QB Stat and High School Production important

traits to pay attention to as any other. In many cases letting you know of the challenges you will face if you decide to go the Brett Favre, Matt Hasselbeck or even Jake Delhomme route.

NFL Franchises have limited resources when it comes to quarterbacks. But the same goes with quarterback coaching. Don't draft a quarterback who performs poorly in these metrics without taking the time to realize the uphill battle you will face. Drastic quarterback development in the NFL isn't impossible. But in many cases coaching becomes a little easier when you draft the next Peyton Manning vs. Brett Favre.

Overall ATH Score	DNP

Prospect CHECKLIST

Yes	All-Pro and Pro Bowl Age: 23 or less	100% of Multiple All-Pro and Pro Bowl QBs since the 1983 NFL Draft Class were at most 23.32 on Draft Day.
Yes	Long-term Starter Age: 24 or less	100% of 64 Start or more Quarterbacks since the 1983 NFL Draft Class were at most 24.19 on Draft Day

Yes	All-Pro and Pro Bowl Hand Size: 9-Inches	94% of Multiple All-Pro and Pro Bowl QBs since the 1998 NFL Draft Class had at least 9-Inch Hand Size
No	All-Pro Production Percentile: 91.4	94% of Multiple All-Pro Quarterbacks Since the 1961 NFL Draft Class scored a production score of 91.4 or Higher comparing TD/INT ratio, Completion% and SOS combined
Yes	Pro Bowl Production Percentile: 75.96	92% of Multiple Pro Bowl Quarterbacks Since the 1961 NFL Draft Class scored a production score of 75.96 or Higher comparing TD/INT ratio, Completion% and SOS combined
Yes	Long-term Starter Production Percentile: 26.64	100% of 64 Start or more Quarterbacks Since the 1961 NFL Draft Class scored a production score of 26.64 or Higher comparing TD/INT ratio, Completion% and SOS combined
No	Pro Bowl High Production Percentile: 84.62	86% of Multiple Pro Bowl Quarterbacks Since the 2007 NFL Draft Class scored a production score of 84.62 or Higher comparing TD/INT and Completion%
No	Long-term Starter High School Production Percentile: 69	100% of 64 Start or more Quarterbacks Since the 2007 NFL Draft Class scored a production score of 69 or Higher comparing TD/INT and Completion%

Metric Analysis: Brad Kaaya has an uneven profile overall. He has Pro Bowl level college indicators. But there have been 0 long-term starting quarterbacks since the 2007 NFL draft class to have as low a HS production score as him. He's only about 5 points off from Kirk Cousins. However, I would project Kaaya as a backup to potential long-term starter.

That's about where his profile is pointing thus far.

Ideal Scheme: West Coast

Projection: Backup to Spot Starter

2017 NFL Draft Profiles

C.J. Beathard

Quarterback

Team	Iowa
Age (On Draft Day)	23.46
Height	6-2
Weight	219
Hand Size	9.375
TDINT+Comp%+SOS Percentile Score	71.28
High School TDINT+Comp% Percentile Score	Unknown
Explosive Lower Body Strength Score	65.16
Speed Score	53.80
Flexibility Score	37.98
Overall ATH Score	53.95

Prospect CHECKLIST

Yes	All-Pro and Pro Bowl Age: 23 or less	100% of Multiple All-Pro and Pro Bowl QBs since the 1983 NFL Draft Class were at most 23.32 on Draft Day.
Yes	Long-term Starter Age: 24 or less	100% of 64 Start or more Quarterbacks since the 1983 NFL Draft Class were at most 24.19 on Draft Day
Yes	All-Pro and Pro Bowl Hand Size: 9-Inches	94% of Multiple All-Pro and Pro Bowl QBs since the 1998 NFL Draft Class had at least 9-Inch Hand Size

No	All-Pro Production Percentile: 91.4	94% of Multiple All-Pro Quarterbacks Since the 1961 NFL Draft Class scored a production score of 91.4 or Higher comparing TD/INT ratio, Completion% and SOS combined
No	Pro Bowl Production Percentile: 75.96	92% of Multiple Pro Bowl Quarterbacks Since the 1961 NFL Draft Class scored a production score of 75.96 or Higher comparing TD/INT ratio, Completion% and SOS combined
Yes	Long-term Starter Production Percentile: 26.64	100% of 64 Start or more Quarterbacks Since the 1961 NFL Draft Class scored a production score of 26.64 or Higher comparing TD/INT ratio, Completion% and SOS combined
Unknown	Pro Bowl High Production Percentile: 84.62	86% of Multiple Pro Bowl Quarterbacks Since the 2007 NFL Draft Class scored a production score of 84.62 or Higher comparing TD/INT and Completion%
Unknown	Long-term Starter High School Production Percentile: 69	100% of 64 Start or more Quarterbacks Since the 2007 NFL Draft Class scored a production score of 69 or Higher comparing TD/INT and Completion%

Metric Analysis: C.J. Beathard profiles at most as a potential long-term starter. Not knowing his complete high school production profile hurts the accuracy of this projection. However, even without that information. His production was just not where it needs to be for high quality quarterbacks. The highest upside you should expect is something like Kirk Cousins or Brock Osweiler.

Athleticism Comp: Justin Wood

Ideal Scheme: West Coast

Projection: Reserve to Backup

2017 NFL Draft Profiles

Cooper Rush

Quarterback

Team	Central Michigan
Age (On Draft Day)	Unknown
Height	6-3
Weight	228
Hand Size	9.125
TDINT+Comp%+SOS Percentile Score	69.14
High School TDINT+Comp% Percentile Score	81.85
Explosive Lower Body Strength Score	7.92
Speed Score	20.90
Flexibility Score	23.09
Overall ATH Score	11.48

Prospect CHECKLIST

Unknown	All-Pro and Pro Bowl Age: 23 or less	100% of Multiple All-Pro and Pro Bowl QBs since the 1983 NFL Draft Class were at most 23.32 on Draft Day.
Unknown	Long-term Starter Age: 24 or less	100% of 64 Start or more Quarterbacks since the 1983 NFL Draft Class were at most 24.19 on Draft Day
Yes	All-Pro and Pro Bowl Hand Size: 9-Inches	94% of Multiple All-Pro and Pro Bowl QBs since the 1998 NFL Draft Class had at least 9-Inch Hand Size

No	All-Pro Production Percentile: 91.4	94% of Multiple All-Pro Quarterbacks Since the 1961 NFL Draft Class scored a production score of 91.4 or Higher comparing TD/INT ratio, Completion% and SOS combined
No	Pro Bowl Production Percentile: 75.96	92% of Multiple Pro Bowl Quarterbacks Since the 1961 NFL Draft Class scored a production score of 75.96 or Higher comparing TD/INT ratio, Completion% and SOS combined
Yes	Long-term Starter Production Percentile: 26.64	100% of 64 Start or more Quarterbacks Since the 1961 NFL Draft Class scored a production score of 26.64 or Higher comparing TD/INT ratio, Completion% and SOS combined
No	Pro Bowl High Production Percentile: 84.62	86% of Multiple Pro Bowl Quarterbacks Since the 2007 NFL Draft Class scored a production score of 84.62 or Higher comparing TD/INT and Completion%
Yes	Long-term Starter High School Production Percentile: 69	100% of 64 Start or more Quarterbacks Since the 2007 NFL Draft Class scored a production score of 69 or Higher comparing TD/INT and Completion%

Metric Analysis: Cooper Rush has a shot as a backup to spot starter based on his production profile from high school to college. But significantly below average athleticism is a concern for someone who isn't exactly the next Tom Brady data wise. Even with Rush hits the 23-age threshold. I still see a backup to spot starter as his highest ceiling.

No	All-Pro Production Percentile: 91.4	94% of Multiple All-Pro Quarterbacks Since the 1961 NFL Draft Class scored a production score of 91.4 or Higher comparing TD/INT ratio, Completion% and SOS combined
Yes	Pro Bowl Production Percentile: 75.96	92% of Multiple Pro Bowl Quarterbacks Since the 1961 NFL Draft Class scored a production score of 75.96 or Higher comparing TD/INT ratio, Completion% and SOS combined
Yes	Long-term Starter Production Percentile: 26.64	100% of 64 Start or more Quarterbacks Since the 1961 NFL Draft Class scored a production score of 26.64 or Higher comparing TD/INT ratio, Completion% and SOS combined
No	Pro Bowl High Production Percentile: 84.62	86% of Multiple Pro Bowl Quarterbacks Since the 2007 NFL Draft Class scored a production score of 84.62 or Higher comparing TD/INT and Completion%
No	Long-term Starter High School Production Percentile: 69	100% of 64 Start or more Quarterbacks Since the 2007 NFL Draft Class scored a production score of 69 or Higher comparing TD/INT and Completion%

Metric Analysis: Davis Webb is one of the cases for why high school production data can be helpful in outing spread inflated quarterbacks. Webb posted a potential Pro Bowl level production in the FBS, but there hasn't been a long-term starter since the 2007 NFL draft class with his High School production. Leaning toward Webb's profile very like Jared Goff. Who had a similar issue where Goff's FBS production didn't match High School. Webb has what some scouts droll over in terms of height and size, but I'd value as a backup to spot starter long-term.

Athletic Comp: Ryan Fitzpatrick

Ideal Scheme: West Coast to Coryell

Projection: Backup to Potential Starter

2017 NFL Draft Profiles

Deshaun Watson

Quarterback

Explosive Lower Body Strength Score	80.39
Speed Score	87.09
Flexibility Score	84.98
Overall ATH Score	88.99

Prospect CHECKLIST

Yes	All-Pro and Pro Bowl Age: 23 or less	100% of Multiple All-Pro and Pro Bowl QBs since the 1983 NFL Draft Class were at most 23.32 on Draft Day.
Yes	Long-term Starter Age: 24 or less	100% of 64 Start or more Quarterbacks since the 1983 NFL Draft Class were at most 24.19 on Draft Day
Yes	All-Pro and Pro Bowl Hand Size: 9-Inches	94% of Multiple All-Pro and Pro Bowl QBs since the 1998 NFL Draft Class had at least 9-Inch Hand Size

Yes	All-Pro Production Percentile: 91.4	94% of Multiple All-Pro Quarterbacks Since the 1961 NFL Draft Class scored a production score of 91.4 or Higher comparing TD/INT ratio, Completion% and SOS combined
Yes	Pro Bowl Production Percentile: 75.96	92% of Multiple Pro Bowl Quarterbacks Since the 1961 NFL Draft Class scored a production score of 75.96 or Higher comparing TD/INT ratio, Completion% and SOS combined
Yes	Long-term Starter Production Percentile: 26.64	100% of 64 Start or more Quarterbacks Since the 1961 NFL Draft Class scored a production score of 26.64 or Higher comparing TD/INT ratio, Completion% and SOS combined
Yes	Pro Bowl High Production Percentile: 84.62	86% of Multiple Pro Bowl Quarterbacks Since the 2007 NFL Draft Class scored a production score of 84.62 or Higher comparing TD/INT and Completion%
Yes	Long-term Starter High School Production Percentile: 69	100% of 64 Start or more Quarterbacks Since the 2007 NFL Draft Class scored a production score of 69 or Higher comparing TD/INT and Completion%

Metric Analysis: Deshaun Watson has the best QB profile in the entire class. Dominant production from High School to College. And played a tougher schedule than most while putting up great numbers. That coupled with Russell Wilson like athleticism make him the safest quarterback in the 2017 NFL draft class. He is simply a generational QB prospect based on his data profile.

Athleticism Comp: Russell Wilson

Ideal Scheme: West Coast or Coryell

Projection: Pro Bowl to All-Pro

2017 NFL Draft Profiles

DeShone Kizer

Quarterback

Team	Notre Dame
Age (On Draft Day)	21.23

Weight	233
Hand Size	9.875
TDINT+Comp%+SOS Percentile Score	68.83
High School TDINT+Comp% Percentile Score	63.82
Explosive Lower Body Strength Score	52.64
Speed Score	61.06
Flexibility Score	33.25
Overall ATH Score	49.28

Prospect CHECKLIST

Yes	All-Pro and Pro Bowl Age: 23 or less	100% of Multiple All-Pro and Pro Bowl QBs since the 1983 NFL Draft Class were at most 23.32 on Draft Day.
Yes	Long-term Starter Age: 24 or less	100% of 64 Start or more Quarterbacks since the 1983 NFL Draft Class were at most 24.19 on Draft Day
Yes	All-Pro and Pro Bowl Hand Size: 9-Inches	94% of Multiple All-Pro and Pro Bowl QBs since the 1998 NFL Draft Class had at least 9-Inch Hand Size

No	All-Pro Production Percentile: 91.4	94% of Multiple All-Pro Quarterbacks Since the 1961 NFL Draft Class scored a production score of 91.4 or Higher comparing TD/INT ratio, Completion% and SOS combined
No	Pro Bowl Production Percentile: 75.96	92% of Multiple Pro Bowl Quarterbacks Since the 1961 NFL Draft Class scored a production score of 75.96 or Higher comparing TD/INT ratio, Completion% and SOS combined
Yes	Long-term Starter Production Percentile: 26.64	100% of 64 Start or more Quarterbacks Since the 1961 NFL Draft Class scored a production score of 26.64 or Higher comparing TD/INT ratio, Completion% and SOS combined
No	Pro Bowl High Production Percentile: 84.62	86% of Multiple Pro Bowl Quarterbacks Since the 2007 NFL Draft Class scored a production score of 84.62 or Higher comparing TD/INT and Completion%
No	Long-term Starter High School Production Percentile: 69	100% of 64 Start or more Quarterbacks Since the 2007 NFL Draft Class scored a production score of 69 or Higher comparing TD/INT and Completion%

Metric Analysis: DeShone Kizer doesn't have a lot of positives to point to other than starter level college production. There have been no long-term starting NFL quarterbacks since the 2007 NFL draft class to put up his kind of high school production. In addition to average athleticism across the board for his size. There is a chance that Kizer could become a starter due to his FBS production. However, there are too many signs pointing toward disappointing outcomes with Kizer.

Athleticism Comp: Aaron Brooks

Ideal Scheme: Coryell

Projection: Backup to Potential Starter

Overall ATH Score	DNP

Prospect CHECKLIST

Yes	All-Pro and Pro Bowl Age: 23 or less	100% of Multiple All-Pro and Pro Bowl QBs since the 1983 NFL Draft Class were at most 23.32 on Draft Day.
Yes	Long-term Starter Age: 24 or less	100% of 64 Start or more Quarterbacks since the 1983 NFL Draft Class were at most 24.19 on Draft Day
Yes	All-Pro and Pro Bowl Hand Size: 9-Inches	94% of Multiple All-Pro and Pro Bowl QBs since the 1998 NFL Draft Class had at least 9-Inch Hand Size

No	All-Pro Production Percentile: 91.4	94% of Multiple All-Pro Quarterbacks Since the 1961 NFL Draft Class scored a production score of 91.4 or Higher comparing TD/INT ratio, Completion% and SOS combined
No	Pro Bowl Production Percentile: 75.96	92% of Multiple Pro Bowl Quarterbacks Since the 1961 NFL Draft Class scored a production score of 75.96 or Higher comparing TD/INT ratio, Completion% and SOS combined
Yes	Long-term Starter Production Percentile: 26.64	100% of 64 Start or more Quarterbacks Since the 1961 NFL Draft Class scored a production score of 26.64 or Higher comparing TD/INT ratio, Completion% and SOS combined
No	Pro Bowl High Production Percentile: 84.62	86% of Multiple Pro Bowl Quarterbacks Since the 2007 NFL Draft Class scored a production score of 84.62 or Higher comparing TD/INT and Completion%
Yes	Long-term Starter High School Production Percentile: 69	100% of 64 Start or more Quarterbacks Since the 2007 NFL Draft Class scored a production score of 69 or Higher comparing TD/INT and Completion%

Metric Analysis: Yes, the NFL views Greg Ward Jr. as a wide receiver. But I refuse to buy into that kind of thinking when he has higher success indicators as a quarterback than a wide receiver. Ward has the profile of a backup to spot starter in a West Coast scheme. Like Seneca Wallace, or Robert Griffin III. You should not expect greatness, but he can give you a nice option for depth at a position the NFL desperately struggles at evaluating.

Athleticism Comp: Geno Smith

Ideal Scheme: West Coast

Projection: Backup to Spot Starter

Prospect CHECKLIST

Yes	All-Pro and Pro Bowl Age: 23 or less	100% of Multiple All-Pro and Pro Bowl QBs since the 1983 NFL Draft Class were at most 23.32 on Draft Day.
Yes	Long-term Starter Age: 24 or less	100% of 64 Start or more Quarterbacks since the 1983 NFL Draft Class were at most 24.19 on Draft Day
Yes	All-Pro and Pro Bowl Hand Size: 9-Inches	94% of Multiple All-Pro and Pro Bowl QBs since the 1998 NFL Draft Class had at least 9-Inch Hand Size

No	All-Pro Production Percentile: 91.4	94% of Multiple All-Pro Quarterbacks Since the 1961 NFL Draft Class scored a production score of 91.4 or Higher comparing TD/INT ratio, Completion% and SOS combined
No	Pro Bowl Production Percentile: 75.96	92% of Multiple Pro Bowl Quarterbacks Since the 1961 NFL Draft Class scored a production score of 75.96 or Higher comparing TD/INT ratio, Completion% and SOS combined
Yes	Long-term Starter Production Percentile: 26.64	100% of 64 Start or more Quarterbacks Since the 1961 NFL Draft Class scored a production score of 26.64 or Higher comparing TD/INT ratio, Completion% and SOS combined
No	Pro Bowl High Production Percentile: 84.62	86% of Multiple Pro Bowl Quarterbacks Since the 2007 NFL Draft Class scored a production score of 84.62 or Higher comparing TD/INT and Completion%
No	Long-term Starter High School Production Percentile: 69	100% of 64 Start or more Quarterbacks Since the 2007 NFL Draft Class scored a production score of 69 or Higher comparing TD/INT and Completion%

Metric Analysis: Josh Dobbs has good athleticism for a quarterback his size. However, his college and especially high school production are not getting it done. He has a shot to stick as a backup to spot starter. But he was a major project coming out of high school. And he's still a major project coming out of college.

Athleticism Comp: Jesse Palmer

Ideal Scheme: West Coast

Projection: Backup to Spot Starter

2017 NFL Draft Profiles

Mitch Leidner

Quarterback

Team	Minnesota
Age (On Draft Day)	23.29
Height	6-3
Weight	226
Hand Size	10
TDINT+Comp%+SOS Percentile Score	56.39
High School TDINT+Comp% Percentile Score	25.90
Explosive Lower Body Strength Score	66.74
Speed Score	15.98
Flexibility Score	48.26
Overall ATH Score	42.82

Prospect CHECKLIST

Yes	All-Pro and Pro Bowl Age: 23 or less	100% of Multiple All-Pro and Pro Bowl QBs since the 1983 NFL Draft Class were at most 23.32 on Draft Day.
Yes	Long-term Starter Age: 24 or less	100% of 64 Start or more Quarterbacks since the 1983 NFL Draft Class were at most 24.19 on Draft Day
Yes	All-Pro and Pro Bowl Hand Size: 9-Inches	94% of Multiple All-Pro and Pro Bowl QBs since the 1998 NFL Draft Class had at least 9-Inch Hand Size

No	All-Pro Production Percentile: 91.4	94% of Multiple All-Pro Quarterbacks Since the 1961 NFL Draft Class scored a production score of 91.4 or Higher comparing TD/INT ratio, Completion% and SOS combined
No	Pro Bowl Production Percentile: 75.96	92% of Multiple Pro Bowl Quarterbacks Since the 1961 NFL Draft Class scored a production score of 75.96 or Higher comparing TD/INT ratio, Completion% and SOS combined
Yes	Long-term Starter Production Percentile: 26.64	100% of 64 Start or more Quarterbacks Since the 1961 NFL Draft Class scored a production score of 26.64 or Higher comparing TD/INT ratio, Completion% and SOS combined
No	Pro Bowl High Production Percentile: 84.62	86% of Multiple Pro Bowl Quarterbacks Since the 2007 NFL Draft Class scored a production score of 84.62 or Higher comparing TD/INT and Completion%
No	Long-term Starter High School Production Percentile: 69	100% of 64 Start or more Quarterbacks Since the 2007 NFL Draft Class scored a production score of 69 or Higher comparing TD/INT and Completion%

Metric Analysis: Mitch Leidner has only had one season with an above average college season. That along with his below average athleticism and scary high school production. Leidner's profile simply doesn't show a player on the cusp of NFL stardom. As much as a player who will be on the bubble on whichever team he plays on. There are simply too many quarterbacks with higher upside to consider.

Athleticism Comp: Andre Woodson

Ideal Scheme: Coryell

Projection: Reserve to Backup

2017 NFL Draft Profiles

Mitch Trubisky

Quarterback

Team	North Carolina
Age (On Draft Day)	22.77
Height	6-2
Weight	222
Hand Size	9.5
TDINT+Comp%+SOS Percentile Score	90.76
High School TDINT+Comp% Percentile Score	83.03
Explosive Lower Body Strength Score	37.67
Speed Score	82.38
Flexibility Score	86.61
Overall ATH Score	71.77

Prospect CHECKLIST

Yes	All-Pro and Pro Bowl Age: 23 or less	100% of Multiple All-Pro and Pro Bowl QBs since the 1983 NFL Draft Class were at most 23.32 on Draft Day.
Yes	Long-term Starter Age: 24 or less	100% of 64 Start or more Quarterbacks since the 1983 NFL Draft Class were at most 24.19 on Draft Day
Yes	All-Pro and Pro Bowl Hand Size: 9-Inches	94% of Multiple All-Pro and Pro Bowl QBs since the 1998 NFL Draft Class had at least 9-Inch Hand Size

No	All-Pro Production Percentile: 91.4	94% of Multiple All-Pro Quarterbacks Since the 1961 NFL Draft Class scored a production score of 91.4 or Higher comparing TD/INT ratio, Completion% and SOS combined
Yes	Pro Bowl Production Percentile: 75.96	92% of Multiple Pro Bowl Quarterbacks Since the 1961 NFL Draft Class scored a production score of 75.96 or Higher comparing TD/INT ratio, Completion% and SOS combined
Yes	Long-term Starter Production Percentile: 26.64	100% of 64 Start or more Quarterbacks Since the 1961 NFL Draft Class scored a production score of 26.64 or Higher comparing TD/INT ratio, Completion% and SOS combined
No	Pro Bowl High Production Percentile: 84.62	86% of Multiple Pro Bowl Quarterbacks Since the 2007 NFL Draft Class scored a production score of 84.62 or Higher comparing TD/INT and Completion%
Yes	Long-term Starter High School Production Percentile: 69	100% of 64 Start or more Quarterbacks Since the 2007 NFL Draft Class scored a production score of 69 or Higher comparing TD/INT and Completion%

Metric Analysis: Mitch Trubisky's profile is solid top to bottom as a long-term NFL starting quarterback. But only Cam Newton, Mark Sanchez, Brock Osweiler and Steve Bono have been found with as similar amount of starts as Trubisky had at North Carolina. The production in college and high school is solid enough to consider him as a starter. But there are too many issues from a lack of starts in college to say he can become a multiple All-Pro or Pro Bowl caliber player.

Athleticism Comp: Alex Smith

Ideal Scheme: West Coast

Projection: Backup to Long-term Starter

2017 NFL Draft Profiles

Nathan Peterman

Quarterback

Team	Pittsburgh
Age (On Draft Day)	22.99
Height	6-2
Weight	226
Hand Size	9.875
TDINT+Comp%+SOS Percentile Score	71.87
High School TDINT+Comp% Percentile Score	69.33
Explosive Lower Body Strength Score	52.20
Speed Score	56.15
Flexibility Score	58.20
Overall ATH Score	58.61

Prospect CHECKLIST

Yes	All-Pro and Pro Bowl Age: 23 or less	100% of Multiple All-Pro and Pro Bowl QBs since the 1983 NFL Draft Class were at most 23.32 on Draft Day.
Yes	Long-term Starter Age: 24 or less	100% of 64 Start or more Quarterbacks since the 1983 NFL Draft Class were at most 24.19 on Draft Day
Yes	All-Pro and Pro Bowl Hand Size: 9-Inches	94% of Multiple All-Pro and Pro Bowl QBs since the 1998 NFL Draft Class had at least 9-Inch Hand Size

No	All-Pro Production Percentile: 91.4	94% of Multiple All-Pro Quarterbacks Since the 1961 NFL Draft Class scored a production score of 91.4 or Higher comparing TD/INT ratio, Completion% and SOS combined
No	Pro Bowl Production Percentile: 75.96	92% of Multiple Pro Bowl Quarterbacks Since the 1961 NFL Draft Class scored a production score of 75.96 or Higher comparing TD/INT ratio, Completion% and SOS combined
Yes	Long-term Starter Production Percentile: 26.64	100% of 64 Start or more Quarterbacks Since the 1961 NFL Draft Class scored a production score of 26.64 or Higher comparing TD/INT ratio, Completion% and SOS combined
No	Pro Bowl High Production Percentile: 84.62	86% of Multiple Pro Bowl Quarterbacks Since the 2007 NFL Draft Class scored a production score of 84.62 or Higher comparing TD/INT and Completion%
Yes	Long-term Starter High School Production Percentile: 69	100% of 64 Start or more Quarterbacks Since the 2007 NFL Draft Class scored a production score of 69 or Higher comparing TD/INT and Completion%

Metric Analysis: Nathan Peterman has starter level production from college to high school. But nothing points toward All-Pro or Pro Bowl status. He was not as productive as Kirk Cousins was coming out of Michigan State. I don't believe that's a fair upside for Peterman. However, he could defiantly become a long-term starter if he develops.

Yes	All-Pro and Pro Bowl Age: 23 or less	100% of Multiple All-Pro and Pro Bowl QBs since the 1983 NFL Draft Class were at most 23.32 on Draft Day.
Yes	Long-term Starter Age: 24 or less	100% of 64 Start or more Quarterbacks since the 1983 NFL Draft Class were at most 24.19 on Draft Day
Yes	All-Pro and Pro Bowl Hand Size: 9-Inches	94% of Multiple All-Pro and Pro Bowl QBs since the 1998 NFL Draft Class had at least 9-Inch Hand Size

No	All-Pro Production Percentile: 91.4	94% of Multiple All-Pro Quarterbacks Since the 1961 NFL Draft Class scored a production score of 91.4 or Higher comparing TD/INT ratio, Completion% and SOS combined
Yes	Pro Bowl Production Percentile: 75.96	92% of Multiple Pro Bowl Quarterbacks Since the 1961 NFL Draft Class scored a production score of 75.96 or Higher comparing TD/INT ratio, Completion% and SOS combined
Yes	Long-term Starter Production Percentile: 26.64	100% of 64 Start or more Quarterbacks Since the 1961 NFL Draft Class scored a production score of 26.64 or Higher comparing TD/INT ratio, Completion% and SOS combined
No	Pro Bowl High Production Percentile: 84.62	86% of Multiple Pro Bowl Quarterbacks Since the 2007 NFL Draft Class scored a production score of 84.62 or Higher comparing TD/INT and Completion%
No	Long-term Starter High School Production Percentile: 69	100% of 64 Start or more Quarterbacks Since the 2007 NFL Draft Class scored a production score of 69 or Higher comparing TD/INT and Completion%

Metric Analysis: I'm a big fan of Patrick Mahomes on film, but his high school production is suspect. Despite putting up Pro Bowl level production in college. If Mahomes becomes a long-term starting quarterback in the NFL, it would be unprecedented based on his high school production. But the Brett Favre comparison could be true as Favre wasn't clean from a data perspective either. I would consider Mahomes a Pro Bowl caliber prospect despite his data profile, but alas that doesn't dismiss the data saying Mahomes could end up being a disappointment.

Yes	Long-term Starter High School Production Percentile: 69	100% of 64 Start or more Quarterbacks Since the 2007 NFL Draft Class scored a production score of 69 or Higher comparing TD/INT and Completion%

Metric Analysis: Based on the film I've seen of Sefo Liufau, I just can't get over his unorthodox mechanics. But from a data perspective, he checks all the boxes of a multiple All-Pro to Pro Bowl caliber quarterback. This is where the film should supersede the data. However, if he becomes an All-Pro, Pro Bowl or even a long-term starter in the NFL. You heard here first that he has a chance.

RB

The running back position. One of football's most glamorous positions at one point has fallen on hard times with the increasing significance of quarterbacks. And the advent of the modern passing game makes backs who can run, pass protect and catch passes extremely important. While some teams have found the solution to this problem through running back by committee systems. It isn't perfect and it reduces your chances of catching opponents off guard.

On top of many running backs not getting enough time to setup opponents for even larger gains. Because how is it possible to be deceptive if you are constantly being bused in and out of the game? What I am speaking to is the value of "bell cows" backs. And there has not been any metric better at finding potential "bell cow" backs, then the total offensive market share metric. This one powerful tool created by taking a running back's total offensive yardage divided by their team's total offensive yardage is god sent.

Since the 1969 NFL draft, there has been substantial quality and quantity correlations with backs who score higher total offensive market share yardage than their peers. And it makes perfect sense, because how can you expect a back to be your team's go to back if said back has never thrived in that role in college. Talent is one thing, but the ability to prove you are consistent, produce and above all stay healthy for an entire collegiate season is much more important than pure size and athleticism. And while everybody likes big backs and they cannot lie. There are very slight correlations to size and success rates at running back within average physical parameters.

It is far more important to pay attention to how a running back's mileage was in terms of their ability to protect their body. Instead of merely looking at how many yards they racked up before entering the NFL. Being a big back doesn't protect you from being a reckless back. And that's why the whole "mileage" argument, or the claim that backs who racked up lots of collegiate yardage doesn't hold water. If more scouts focused on whether a running back is protecting themselves instead of how big they are.

Then they would hit on more running backs and find backs who can truly give you what the legends at the position gave you in terms of longevity and experience. Every NFL fan, or scout complains about the short life of most backs. But that concern makes it even more important to understand the variables that favor a longer shelf life. And the variables you are about to see below, highlight what the backs with long careers and quality success had. That way, you can consistently hit the ground running often when it comes to hitting at the running back position

No	Bench: 17 or More	100% of Multiple All-Pro and Pro Bowl RBs since 1999 had at least 17 reps on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: There are a few things to nitpick with Aaron Jones' profile in terms of his strength of schedule, age and not hitting the bench rep threshold by one rep. However, when you step back and look at the big picture. Jones can be what people thought Ameer Abdullah was. He has outstanding explosiveness and flexibility that if he goes to a zone blocking scheme could turn him into a star. Jones is likely a Day 3 selection due to his level of competition, but he has the best chance to be a major contributor if he falls to the right spot.

Ideal Scheme: Zone

Projection: Long-term Starter to Pro Bowler

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Alvin Kamara's biggest issues aren't physical or athletic in nature. His issues are with production. There hasn't been an All-Pro or Pro Bowl caliber back with Kamara's market share production since the 1980s. Even the Charlie Garner comps fall flat as Garner had starter caliber market share production at Tennessee in the 90s. So, while Kamara fits the bill with most of the data traits.

That production spells a very high chance of disappoint at the next level. In addition to poor agility drills that were close to not meeting the quality threshold. Kamara has a good shot at being exactly what he was at Tennessee. A committee back. However, he's just not someone I see as a starter or high quality contributor based on his data profile.

Ideal Scheme: Power

Projection: Backup to Spot Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Brian Hill had an above average Combine, but he didn't have one athletic trait that was truly elite. However, Hill checks all the boxes except for the bench as a long-term starting running back in the NFL. His production even for his level of competition was impressive. Along with his age and physical attributes. Finding a long-term starting back is rare, and Hill has the metric traits to fit that role if he gets an opportunity.

Ideal Scheme: Zone Blocking

Projection: Backup to Long-term Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Christian McCaffrey is one of the tougher metric evaluations I've done in some time. From a pure age and production standpoint, he's the best in this class. But the physical attributes in terms of arm length and only 10 reps on the bench are a concern. And I've come to this conclusion on McCaffrey. You can make the case that his lack of length and upper body strength will turn him into a good starter, but he will never become an elite contributor in the NFL.

Or you can make the case that the way he wins with elite change of direction and flexibility that made him a dominate back in college. Will make him a dominate back in the NFL in the right scheme. I side with the later in this case. Because you may come to a different conclusion based on your own film evaluations. However, my stance with data is when there are multiple signs pointing toward success with a few saying no that are less important.

I like to side with the signs toward success. And in McCaffrey's case, he has all the tools and proven ability from college to become an elite to near elite back. There are simply too many positives in McCaffrey's profile that point toward stardom. That's my stance and you can interpret it any way you want.

Ideal Scheme: Zone

Projection: Long-term Starter to Pro Bowler

Yes	Bench: 17 or More	100% of Multiple All-Pro and Pro Bowl RBs since 1999 had at least 17 reps on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Christopher Carson is in the same situation as Kamara from a bad data perspective. Except Carson played a much less competitive schedule and isn't as young. Everything from a physical attribute standpoint is there. However, his market share production is so low that he is more likely a backup to reserve player than a significant contributor in the NFL. That's the most likely endgame for Carson, but his athletic positive could lure some teams to over value him.

Ideal Scheme: Power

Projection: Reserve to Backup

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Not a lot of positives here for Corey Clement. Limited production, athleticism, and length. Finding a role as a backup would be more likely than a long-term starter. Has size and put up a decent bench number. In addition to elite flexibility based on his Pro Day testing, but other than that buyer beware.

Ideal Scheme: Zone

Projection: Reserve to Backup

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Dalvin Cook is a member of the trifecta of potential generational backs in this class including Leonard Fournette and Christian McCaffrey. But unlike Fournette and McCaffrey, he does not possess one athletic trait that is elite. His profile is like Demarco Murray except for not being as big, or having Murray's elite level speed. However, don't count Cook out just yet. He can bring value to a team as a speed back and has the production/age combination from college to project as a very good starter.

It's just the case for a generational back, or a special back is not in the cards here. Cook's best attribute on tape is his speed. And I'm certain that will be a major asset early in his career. But once that speed goes. I'm worried about the second half of Cook's NFL career versus the beginning.

Ideal Scheme: Power

Projection: Long-term Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Dare Ogunbowale put up the athletic profile of a backup running back. And that is exactly how the rest of his production and age suggests. There is a place for a back like Ogunbowale who can pass protect and catch a bit out of the backfield. However, backs who don't have a chance to be a significant contributor on an offense are less valuable to me. Despite the whole NFL is about mismatches mantra the NFL is trying to sell at the Combine.

Ideal Scheme: Zone

Projection: Reserve to Backup

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: FCS production is a variable I'm still collecting data on, but there is plenty of other variables to discuss about De'Angelo Henderson. The major positives are his explosiveness and speed are above average. And his speed is Pro Bowl level. However, Henderson's height is suspect as the last back to be a Pro Bowler at 5-7 was Maurice Jones-Drew. Who also had better athleticism and proven production against major FBS opponents.

Henderson could find a role as a Antone Smith type of player, but I'd be wary about him as a long-term starting candidate.

Ideal Scheme: Power

Projection: Backup to Spot Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: De'Veon Smith had a terrific draft process all the way up until the Combine. Smith's biggest issues are production and athleticism. He put unimpressive agility testing. And because he didn't perform the forty-yard dash there is no many positives to point. View as a backup to reserve until he proves he has some athletic upside, because his production is not cutting it.

Ideal Scheme: Zone

Projection: Reserve to Backup

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: I don't normally criticize a player's choice to declare early for the draft. But in Devine Redding's case, it was a huge mistake. Minimum starter level production with zero indicators of elite athletic ability. On top of a lack of length. He should be viewed as a backup to reserve for the near future.

Ideal Scheme: Zone

Projection: Reserve to Backup

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Donnell Pumphrey is a tough back who had an amazing college career. But when it comes to his overall athletic ability and size. It doesn't spell a player who is about to become a significant contributor in the NFL. I see someone who can become a team's backup or reserve due to his experience. However, if he becomes a long-term starter it would be unprecedented.

Ideal Scheme: Zone

Projection: Reserve to Backup

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: D'Onta Foreman has an impressive profile. If not one of the best profiles for success. He has two substantial athletic traits in explosiveness and speed. In addition to elite production and age for his size. Thus, I'd project Foreman as a long-term starter with the only thing holding him back as a prospect in his 3-Cone.

Ideal Scheme: Power

Projection: Long-term Starter to Potential Pro Bowler

No	Athleticism Score: 79.28 or higher	90% of Multiple All-Pro and Pro Bowl RBs since 1999 had at least a one athleticism score (Explosive lower body, speed, or flexibility) of 79.28
DNP	3-Cone: 7.09 or faster	92% of Multiple All-Pro and Pro Bowl RBs since 1999 had a 3-Cone of 7.09 or faster
Yes	Bench: 17 or More	100% of Multiple All-Pro and Pro Bowl RBs since 1999 had at least 17 reps on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Elijah Hood has decent size and hit a decent number of reps on the bench. But his bare minimum Pro Bowl potential production. And not performing any of the athletic drills at the Combine make his overall evaluation right now incomplete. Even after his Pro Day where he only performed the 40. He still doesn't have a high quality athletic measure.

Ideal Scheme: Power

Projection: Backup to Potential Starter

No	3-Cone: 7.09 or faster	92% of Multiple All-Pro and Pro Bowl RBs since 1999 had a 3-Cone of 7.09 or faster
No	Bench: 17 or More	100% of Multiple All-Pro and Pro Bowl RBs since 1999 had at least 17 reps on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Elijah McGuire will most likely never be a long-term starter in the NFL. But he has a lot of traits in common with Charles Sims. Explosive and fast with good, but not elite production against non-Power five teams. There is potential for McGuire to become Charles Sims light in a committee. However, McGuire is still a back with a decent number of red flags to consider a UDFA vs. late round asset.

Ideal Scheme: Power

Projection: Backup to Spot Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jahad Thomas has above average production and is young. But that is where the positives end. Below average explosiveness and speed along with a poor bench performance. I don't see the makings of a long-term starting back. Other than a future as a backup to reserve.

Ideal Scheme: Zone

Projection: Reserve to Backup

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Despite poor agility and explosiveness numbers, James Connor profiles decently as a starting back. He doesn't have a shot of being an elite running back. But there is potential for him to have a Benjarvus Green-Ellis/Jeremy Hill type of career arc. Everything from production and age point toward an outcome like that. So, I would be keen to see where he lands, and the type of competition he should face that could unlock this potential.

Yes	3-Cone: 7.09 or faster	92% of Multiple All-Pro and Pro Bowl RBs since 1999 had a 3-Cone of 7.09 or faster
Yes	Bench: 17 or More	100% of Multiple All-Pro and Pro Bowl RBs since 1999 had at least 17 reps on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jeremy McNichols had a fantastic day at the Combine. Showing above average explosiveness, speed, and flexibility. His age and production point toward an above average running back too. However, the only concerns are with his fumble rate that I don't have a large enough sample size to set up a red flag. And he didn't perform the bench, but I would strongly consider keeping McNichols in mind if he falls to the right spot.

Ideal Scheme: Any

Projection: Long-term Starter to Pro Bowler

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: A lot is made about Joe Mixon off the field, but his data on paper isn't exactly clean either. He hit all the thresholds except for 3-Cone by .01 to project as a potential Pro Bowl caliber running back. But he has never put up the market share production of a back who is destined to be a generational force. Best case scenario is a Ricky Watters like career arc. He could be that type of outlier, but there is potential he will rub a lot of folks off the wrong way.

Ideal Scheme: Power

Projection: Potential Starter to Pro Bowler

No	Bench: 17 or More	100% of Multiple All-Pro and Pro Bowl RBs since 1999 had at least 17 reps on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Joe Williams has the goods as an athlete, but there are a lot of signs pointing toward failure. His age and lack of elite production really drag down his profile. However, Joe Williams will always be a threat with his athleticism to be a value. It's just the chance of consistent long-term success are very low. Look for him to fall to the right spot and he could emerge into a few very solid seasons of production.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Justin Davis does not have a ton of positives to point to other than his age and bench. Davis had a few positives in his Pro Day results. However, for the most part Davis' profile doesn't suggest a high likelihood of stardom. He could emerge as a committee style back if he gets on the right team. But I would avoid considering his combination of poor athleticism and production.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Kareem Hunt has a very solid overall profile. His explosiveness is almost near elite and he hit the bench thresholds as well. Based on his speed, a zone blocking scheme will be the best fit for his explosiveness. But he did not put up a good short shuttle or 3-Cone at his Pro Day. The bottom-line is the components for a starting NFL running back are here for a zone blocking scheme, but not a high quality one.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: If we go by the assumption that Leonard Fournette did not perform agility drills, because he was about to put up a poor time. He would still be a Demarco Murray like prospect. Elite speed is Fournette's ticket to being a very good back in a power scheme. However, he is not Adrian Peterson, because what made Peterson so special was a combination of elite explosiveness and speed. And Fournette has the speed, but he doesn't have the explosiveness.

Ideal Scheme: Power

Projection: Long-term Starter to Pro Bowler

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Marlon Mack has above average explosiveness and speed. But he doesn't have one elite athleticism trait. With good, but not great production coming from a non-Power five conference. Not performing the agility drills is an uneasy piece missing from his puzzle. But I can conclude at the very least that Mack has the athleticism and production to become a long-term starter in the right situation.

Ideal Scheme: Power

Projection: Backup to Long-term Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Matt Dayes did not perform a lot of drills at the combine. And that's not a good thing if you are Matt Dayes. He has enough production to suggest a potential starter. But nowhere near enough to feel comfortable with a below average explosive score. His Pro Day did not improve his potential upside, so it's best to view as backup to reserve with only a slight chance as spot starter.

Ideal Scheme: Power

Projection: Reserve to Spot Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: There are few positives with Rushel Shell's profile. He has decent size and hit a good number of bench reps. However, little production, advanced age and a below average speed score are not going to get it done. I'd wait to see what he does for the rest of his testing at his Pro Day. But I would view him as a backup/reserve even if he had some positive testing in the future.

Ideal Scheme: Zone

Projection: Reserve to Backup

Yes	Bench: 17 or More	100% of Multiple All-Pro and Pro Bowl RBs since 1999 had at least 17 reps on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Strong as an ox with near elite explosiveness. Perine is a throwback power runner. His profile resembles Trent Richardson and Anthony Dixon type backs who have explosiveness and speed. But lack flexibility for their size. However, Perine has a decent profile to follow and keep track of, if he lands in the right spot.

Ideal Scheme: Zone

Projection: Backup to Long-term Starter

No	Athleticism Score: 79.28 or higher	90% of Multiple All-Pro and Pro Bowl RBs since 1999 had at least a one athleticism score (Explosive lower body, speed, or flexibility) of 79.28
Yes	3-Cone: 7.09 or faster	92% of Multiple All-Pro and Pro Bowl RBs since 1999 had a 3-Cone of 7.09 or faster
Yes	Bench: 17 or More	100% of Multiple All-Pro and Pro Bowl RBs since 1999 had at least 17 reps on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Stanley "Boom" Williams has similar traits Jacquizz Rodgers without the enormous market share production of Rodgers. There are not enough indicators to suggest he will ever become a long-term starter in the NFL. But he has a skill set to become a team's space back in a committee. Watch for where he lands, because he could put up substantial numbers in the heavy yardage offense.

Ideal Scheme: Zone

Projection: Reserve to Backup

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: T.J. Logan will likely remain a backup in a committee, because that's what he was in college. However, he has near elite speed for his size with elite flexibility too. Everything else is a concern with Logan, if you are looking for someone to breakout as a major contributor in the NFL. But I'd keep track of him due to that speed and flexibility.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Tarik Cohen's chances of becoming a long-term starter in the NFL are very low. But his speed is enough to consider a shot as a backup or change of pace back. I was a little disappointed he didn't take part in the agility drills based on his tape. However, Cohen proved that he has the athleticism to be a contributor in the NFL. And should be someone to keep track of as the Pro Day process begins.

Ideal Scheme: Power

Projection: Reserve to Spot Starter

No	3-Cone: 7.09 or faster	92% of Multiple All-Pro and Pro Bowl RBs since 1999 had a 3-Cone of 7.09 or faster
Yes	Bench: 17 or More	100% of Multiple All-Pro and Pro Bowl RBs since 1999 had at least 17 reps on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: I always wondered what drew so much love and admiration with Wayne Gallman amongst some scouts. And I'm still left wondering after his athletic testing. It wasn't pretty. Below average in every metric with below average market share production as well. I'd expect some chance that Gallman could become a backup or reserve. However, there are too many other backs in this class with better numbers to consider than Gallman.

Ideal Scheme: Zone

Projection: Reserve to Backup

WR

Wide receiver is another one of those positions where there is an awful lot of debate over meaningless information. Most of the perceptions we have on the prototypical wide receiver is grounded in superficial ideals of height and athleticism. And while the notion that a long and tall wide receiver gives you a type of strategic advantage over your opponent is true. There are many ways to gain a strategic advantage at wide receiver. Which boils down to two main prototypes: long and tall vs. short and quick.

Those two types of wide receivers have dominated the NFL for decades, only the names change. So instead of thinking about the world as big wide receiver vs. small wide receiver. We should instead view it as productive wide receiver vs. unproductive wide receiver. Because the same quality and quantity correlations of market share at running back occur at wide receiver. Or passing yardage market share to be more specific.

You take a wide receiver's total receiving yardage and divide by their team's total passing yardage. Something so simple has shown to be a powerful piece of information combined with age and strength of schedule data to give a good sense of the wide receivers who were statistically dominate. But also, the wide receivers who were truly primary threats and overcame tough collegiate odds. Showing massive ramifications, as the clear majority of long-term starting and quality wide receivers since the 1969 NFL draft class scored in the high 58-99 percentile of market share production. In addition to the chances of high quality favoring those who score on the high end of that spectrum than the low end.

All of this is to say, that you don't leave film study at home without metrics. Understanding the odds and raising meaningful questions in wide receiver study is invaluable to getting the pick right. And properly valuing wide receivers in the first place. We criticize lots of teams for getting running back picks wrong, but teams miss on wide receivers high with a surprising amount of regularity as well. There is so much variety to the position and the ways in which wide receivers win.

That you need to know fundamentally the baselines and work from there. Which is what you are about to see below. Plus, I added arm length and hand size thresholds too. Due to the confusion about how big or small these types of physical measures need to be. My physical measurement data does not go as far back as my production data.

But it is still a large enough sample size to give meaningful insight into what the thresholds are and what they mean. So, enjoy the profiles below.

No	All-Pro MSA Rating: 79 or Higher	87% of Multiple All-Pro WRs since the 1969 NFL Draft Class were in the 79 Percentile of MSA or >
No	Pro Bowl MSA Rating: 71 or Higher	88% of Multiple Pro Bowl WRs since the 1969 NFL Draft Class were in the 71 Percentile or >
Yes	6-2 or Taller Arm Length: 32 5/8-Inches	80% of Multiple All-Pro and Pro Bowl WRs at 6-2 or Taller had at least 32 5/8-Inch Arm Length since 1999 NFL Draft Class
N/A	6-1 or Shorter Arm Length: 29 3/4-Inches	100% of Multiple All-Pro and Pro Bowl WRs at 6-1 or Shorter had at least 29 3/4-Inch Arm Length since 1999 NFL Draft Class
Yes	8 7/8-Inch Hand Size	100% of Multiple All-Pro and Pro Bowl WRs had at least 8 7/8-Inch Hand Size since 1999 NFL Draft Class
Yes	5-9 or Taller	100% of Multiple All-Pro and Pro Bowl WRs were at least 5-9 or Taller since the 1999 NFL Draft Class
Yes	Explosive Lower Body Strength Score: 7.19 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had an explosive lower body strength score of 7.19 or higher
Yes	Speed Score: 24.75 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a speed score of 24.75 or higher
Yes	Flexibility Score: 9.39 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a flexibility score of 9.39 or higher
Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Amara Darboh hits all the metric traits of a long-term starting wide receiver. But he has almost zero chance of becoming a multiple Pro Bowl or All-Pro wide receiver. Best case for him is a

Jerricho Cotchery type of career path. However, where he falls and the competition he faces will determine his initial success. Value you as a potential starter and you won't lose money.

Mismatch Type: Size/Athleticism

Projection: Backup to Long-term Starter

2017 NFL Draft Profiles

Amba Etta-Tawo

Wide Receiver

Yes	Flexibility Score: 9.39 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a flexibility score of 9.39 or higher
Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Amba Etta-Tawo has a decent shot at being a lesser version of Jordy Nelson. He has above average athleticism. In addition to decent production indicating a potential starter. However, his age is worrisome to his overall upside in the NFL. He has all the tools to be an NFL starter. I would buy as a potential starting wide receiver and hope he gets initial success early.

Mismatch Type: Athleticism

Projection: Backup to Potential Starter

2017 NFL Draft Profiles

Ardarius Stewart

Wide Receiver

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Austin Carr has a strong profile as a long-term starting slot receiver. His problems are just age and being in a class filled with similar athletes to him. However, he was productive enough with the right combination of traits to find success. There is a bit more risk with Carr versus others due to his age. But despite those risks he still sticks out plenty in a deep class of slot receivers.

Yes	Flexibility Score: 9.39 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a flexibility score of 9.39 or higher
Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Bug Howard has a good size and physical attributes for the position. In addition to above average explosiveness, speed, and flexibility. But his production contradicts all the positives in his profile. There is athletic upside here. However, not enough to justify projecting more than a backup to reserve as the most likely outcome.

Mismatch Type: Size/Athleticism

Projection: Reserve to Backup

Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Carlos Henderson has a very solid profile. Above average explosiveness, speed, and solid production. The only concerns are level of competition and flexibility. He played one of the weakest strength of schedules since 1969. And didn't put up a dominate market share production season despite that schedule.

And with athleticism traits like Limas Sweed and Justin Hunter from a flexibility standpoint. There are plenty of concerns to consider that Henderson can be good, but not great. A player who looked excellent against weak competition. But could disappoint once he makes the transition to the NFL.

Mismatch Type: Explosiveness/Speed

Projection: Backup to Long-term Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Chad Hansen profiles as a fringe Pro Bowl caliber wide receiver in the NFL. He had good production against a tough schedule. And the flexibility for his size is near elite. But his overall upside picture is a good, but not great starter. Hansen is one of the safer wide receiver prospects from a data perspective in this class in terms of projection.

Mismatch Type: Flexibility

Projection: Long-term Starter to Potential Pro Bowler

Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Chad Williams' doesn't have FBS production, making his projection less reliable. However, he has above average athleticism across the board. And has all the benchmarks for a wide receiver his size in length and hand size. His market share profile would have been elite at the FBS level. But it was at the FCS, yet I'd still consider Williams a potential long-term starter with his athleticism traits.

Mismatch Type: Athleticism

Projection: Backup to Long-term Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: As clean a metric profile I've seen since Amari Cooper in 2015. Above average explosiveness, speed, and flexibility. In addition to great production against tough competition. Godwin is in a tier where there is very little risk of not becoming a long-term NFL starter. Let alone an even better chance at becoming a quality starter.

Mismatch Type: Athleticism

Projection: Long-term Starter to Pro Bowler

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: I am currently working on a more stable sample for FCS/DII/DIII prospects. But the general ball park for successful wide receivers from that level of comp is where Kupp fell. And there was a legion of doubters about Kupp after the Combine. However, he has the near elite flexibility traits that could turn him into a productive starter. He will probably never be a quality NFL starter, but he could end up having a far better career based on his flexibility score.

Mismatch Type: Flexibility

Projection: Backup to Potential Starter

N/A	6-1 or Shorter Arm Length: 29 3/4-Inches	100% of Multiple All-Pro and Pro Bowl WRs at 6-1 or Shorter had at least 29 3/4-Inch Arm Length since 1999 NFL Draft Class
Yes	8 7/8-Inch Hand Size	100% of Multiple All-Pro and Pro Bowl WRs had at least 8 7/8-Inch Hand Size since 1999 NFL Draft Class
Yes	5-9 or Taller	100% of Multiple All-Pro and Pro Bowl WRs were at least 5-9 or Taller since the 1999 NFL Draft Class
DNP	Explosive Lower Body Strength Score: 7.19 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had an explosive lower body strength score of 7.19 or higher
Yes	Speed Score: 24.75 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a speed score of 24.75 or higher
DNP	Flexibility Score: 9.39 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a flexibility score of 9.39 or higher
Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Not enough information to judge athleticism. However, that is a crucial piece as Davis' MSA rating is as low as it is. He needs to prove he can be an outlier with a strong Pro Day performance. Otherwise his projection looks solid as a NFL starter. But nothing indicating someone who can put up consistently elite or near elite production.

Mismatch Type: Length

Projection: Long-term Starter to Fringe Pro Bowler

Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Curtis Samuel has a Desean Jackson like performance at the Combine. Lots of speed, and isn't the most explosive or fluid for his size. But you take a step back and look at the big picture. This is an extremely fast athlete who is young and put up solid production against tough competition. Samuel has a shot to be quality NFL starter, but isn't quite generational.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Advanced age with below average production and athleticism are not a great combination. There are a lot of good wide receivers to consider in this class. But Rogers is not one of them I'd value highly. In addition to Rogers failing two athletic thresholds for quality as well.

Mismatch Type: None

Projection: Reserve to Backup

Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: DeAngelo Yancey is an impressive athlete with limited production. He missed the long-term starter threshold by about one point. I'd still consider him someone who could emerge as a starter with his athleticism. However, I would not spend a ton on athleticism alone. Value as a reserve to backup with athletic upside to start only.

Mismatch Type: Size/Athleticism

Projection: Backup to Potential Starter

Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Dede Westbrook's athletic drills are from his Pro Day. But he was already on shaky footing due to his age and strength of schedule. There is a chance he can become a long-term starter based on his speed score. And his market share production was high enough. Thus, I'd project Dede as a long-term starter with a bare minimum shot of becoming a Pro Bowler based on his age.

Mismatch Type: Speed

Projection: Long-term Starter to Potential Pro Bowler

Yes	5-9 or Taller	100% of Multiple All-Pro and Pro Bowl WRs were at least 5-9 or Taller since the 1999 NFL Draft Class
No	Explosive Lower Body Strength Score: 7.19 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had an explosive lower body strength score of 7.19 or higher
No	Speed Score: 24.75 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a speed score of 24.75 or higher
Yes	Flexibility Score: 9.39 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a flexibility score of 9.39 or higher
No	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Drew Morgan failed two athleticism marks in explosiveness and speed. That is a problem in addition to his below average production. And below average athleticism across the board. Make Morgan someone who will probably have a hard time sticking to a roster long-term. He could still crave out a role as a reserve slot, but I don't see a scenario where he becomes a long-term starter.

Mismatch Type: None

Yes	5-9 or Taller	100% of Multiple All-Pro and Pro Bowl WRs were at least 5-9 or Taller since the 1999 NFL Draft Class
Yes	Explosive Lower Body Strength Score: 7.19 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had an explosive lower body strength score of 7.19 or higher
Yes	Speed Score: 24.75 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a speed score of 24.75 or higher
Yes	Flexibility Score: 9.39 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a flexibility score of 9.39 or higher
Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Fred Ross is one of the more underrated wide receiver prospects in this class. He put up a solid profile across the board with above average athleticism, production and produced well against tougher competition. His profile looks very much like Devin Aromashodu and Tommy Streeter. But with a much higher MSA rating. If he falls to the right team, he could become this year's Allen Hurns.

Mismatch Type: Athleticism

Projection: Long-term Starter to Potential Pro Bowler

Yes	Speed Score: 24.75 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a speed score of 24.75 or higher
Yes	Flexibility Score: 9.39 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a flexibility score of 9.39 or higher
No	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Gabe Marks like Drew Morgan failed to meet one athletic threshold. And his athleticism is below average across the board. Add in his age and production, which are below average as well. Leaves us with a prospect who looks more like a backup to reserve than a long-term starter.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Isaiah Ford has a lot positives from his production and to above average explosiveness. But his speed and flexibility for his size are just not getting it done. Very low chance of becoming a long-term starter with how poor his speed score was. However, there is a chance he could have a Jarvis Landry or Bernard Berrian like career on the right team. I just don't know if he can parlay that into consistently elite or near elite production throughout his NFL career.

Mismatch Type: Explosiveness

Projection: Backup to Long-term Starter

No	All-Pro MSA Rating: 79 or Higher	87% of Multiple All-Pro WRs since the 1969 NFL Draft Class were in the 79 Percentile of MSA or >
Yes	Pro Bowl MSA Rating: 71 or Higher	88% of Multiple Pro Bowl WRs since the 1969 NFL Draft Class were in the 71 Percentile or >
N/A	6-2 or Taller Arm Length: 32 5/8-Inches	80% of Multiple All-Pro and Pro Bowl WRs at 6-2 or Taller had at least 32 5/8-Inch Arm Length since 1999 NFL Draft Class
No	6-1 or Shorter Arm Length: 29 3/4-Inches	100% of Multiple All-Pro and Pro Bowl WRs at 6-1 or Shorter had at least 29 3/4-Inch Arm Length since 1999 NFL Draft Class
Yes	8 7/8-Inch Hand Size	100% of Multiple All-Pro and Pro Bowl WRs had at least 8 7/8-Inch Hand Size since 1999 NFL Draft Class
No	5-9 or Taller	100% of Multiple All-Pro and Pro Bowl WRs were at least 5-9 or Taller since the 1999 NFL Draft Class
Yes	Explosive Lower Body Strength Score: 7.19 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had an explosive lower body strength score of 7.19 or higher
Yes	Speed Score: 24.75 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a speed score of 24.75 or higher
Yes	Flexibility Score: 9.39 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a flexibility score of 9.39 or higher
Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Isaiah McKenzie has a lot of Taylor Gabriel like traits in his profile. Above average speed and flexibility for his size. But the overall production is just not there to say he can become a consistently productive long-term starter. And his height is very concerning as well when it comes to quality and long-term starting prospects. However, there is enough here from an athleticism standpoint to say he has a chance at becoming a contributor in the NFL.

Mismatch Type: Speed/Flexibility

Projection: Backup to Potential Starter

Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Ishmael Zamora has one of the more intriguing profiles in the wide receiver class. Elite explosiveness and near elite speed. Zamora has more athleticism than Mike Williams with better production and age indicators. There are some issues off the field. However, Zamora is at the type of age to make a push as a long-term starter to Pro Bowler.

Mismatch Type: Size/Athleticism

Projection: Long-term Starter to Pro Bowler

N/A	6-1 or Shorter Arm Length: 29 3/4-Inches	100% of Multiple All-Pro and Pro Bowl WRs at 6-1 or Shorter had at least 29 3/4-Inch Arm Length since 1999 NFL Draft Class
Yes	8 7/8-Inch Hand Size	100% of Multiple All-Pro and Pro Bowl WRs had at least 8 7/8-Inch Hand Size since 1999 NFL Draft Class
Yes	5-9 or Taller	100% of Multiple All-Pro and Pro Bowl WRs were at least 5-9 or Taller since the 1999 NFL Draft Class
Yes	Explosive Lower Body Strength Score: 7.19 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had an explosive lower body strength score of 7.19 or higher
Yes	Speed Score: 24.75 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a speed score of 24.75 or higher
Yes	Flexibility Score: 9.39 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a flexibility score of 9.39 or higher
Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jalen Robinette defiantly has size and athleticism. But being up there in age and playing very weak competition negates a lot of his market share production. He could develop into a NFL starter. However, there are too many inconsistencies in his profile to consider over other prospects.

Mismatch Type: Size/Athleticism

Projection: Backup to Potential Starter

2017 NFL Draft Profiles

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jamari Staples has above average explosiveness. But his overall profile from production to speed says backup to spot starter only. He has some size and length that intrigues most scouts. However, he doesn't have the right mix of metric traits to consider very high on any board.

Mismatch Type: Explosiveness

Projection: Backup to Spot Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jehu Chesson has all the athleticism and physical attributes you want at the position. However, it never came together in terms of solid market share production during his career. Some

teams will gamble on the promise he has shown in his career at Michigan. But the shrewd evaluators will see a project athlete with a more likely chance of becoming a backup vs. long-term starter.

Mismatch Type: Athleticism

Projection: Backup to Spot Starter

Yes	Flexibility Score: 9.39 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a flexibility score of 9.39 or higher
Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Elite explosiveness and flexibility. Jerome Lane has the athletic traits of an elite linebacker vs. an elite wide receiver to a certain extent. However, he put up solid production and is one

of the younger prospects in the class. A Rishard Matthews type of career arc are best case scenarios for Lane.

Mismatch Type: Size/Athleticism

Projection: Backup to Long-term Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Bobo Wilson has the profile of a backup to reserve caliber wide receiver. But his below average speed isn't helping his case to stick out in the class? I will wait on his Pro Day to give my final verdict. However, even with a great Pro Day. He's a still a major question mark production wise.

Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: John Ross has a good shot to be the Cliff Branch of the modern NFL. He has above average explosiveness and elite speed. But his overall market share production, age, and the schedule he faced are a bit lackluster. His profile shows a wide receiver who can carve out multiple Pro Bowls if

he stays healthy. However, he's not guaranteed to be a consistently dominant wide receiver in his career.

Mismatch Type: Explosiveness/Speed

Projection: Long-term Starter to Pro Bowler

Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Josh Malone has a solid long-term starter profile. He has above average speed and flexibility. But his below average explosiveness, length and production suggest he will be good not

great. Malone has a better chance than most to carve out a starting job. However, there are enough yellow flags to put a cap on his upside.

Mismatch Type: Speed/Flexibility

Projection: Backup to Long-term Starter

Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Josh Reynolds has solid market share production, above average flexibility and a decent MSA rating. However, he doesn't have impressive length for his size, lacks speed and explosiveness. He's more likely a long-term starter than a quality starter at the next level. Because of his

athletic deficiencies. And his inability from a production standpoint to dominant with those deficiencies.

Mismatch Type: Flexibility

Projection: Backup to Long-term Starter

Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Juju Smith-Schuster is a scary prospect due to having all the potential in the world from a production and age perspective. However, there are just a few things off including maybe being too young. Kenny Britt is a similar prospect who entered at an almost identical age and struggled to

find dominance. Juju will either become the second coming of Anquan Boldin, or become Carl Pickens. But my main concern is I didn't see a generational prospect on film when I watched him last fall.

Mismatch Type: Athleticism

Projection: Long-term Starter to Potential Pro Bowler

Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: K.D. Cannon has a solid profile as a starting NFL wide receiver. He has above average speed and checks all the physical attribute boxes. He's isn't the most explosive receiver. In addition to not having elite production. However, Cannon could become Stefon Diggs light.

Mismatch Type: Speed

Projection: Backup to Long-term Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Keevan Lucas doesn't have the strongest profile as an athlete. But he has elite market share production. Along with a decent MSA rating as well. He could become a complimentary wide

receiver in the mold of Allen Hurns. There's some risk, but also a sizable reward if acquired at the right spot.

Mismatch Type: Speed

Projection: Backup to Long-term Starter

Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: I'm still collecting FCS/DII/DIII level production data, but Kendrick Bourne as an athlete is not bad. He has above average explosiveness and flexibility. However, he doesn't quite hit the

bare minimum speed score for All-Pro to Pro Bowl wide receivers. There are enough components for a potential starter. But I'd put my money on other players that are easier projections now.

Mismatch Type: Explosiveness/Flexibility

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: All athlete with elite production. Golliday's issues are more with his age, the schedule he faced and arm length that is less than ideal for his height range. He has a chance to become a

starting wide receiver. However, I just don't see much upside as a quality wide receiver in the future. Despite all the positive athleticism traits.

Mismatch Type: Size/Athleticism

Projection: Backup to Long-term Starter

No	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Keon Hatcher does not have a good profile for long-term success. Below average market share production and speed. With a MSA rating that is in the dead zone. Hatcher is more likely

a backup to reserve caliber wide receiver. There is much more to nitpick, but there is not much here pointing to even a long-term starter.

Mismatch Type: None

Projection: Backup to Potential Starter

Yes	Flexibility Score: 9.39 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a flexibility score of 9.39 or higher
Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Kermit Whitfield is purely a backup speed wide receiver. And can bring some value to special teams as well. But there is very low chance he becomes a long-term NFL starter. Not a wide receiver who deserves a heavy investment in or after the draft.

Mismatch Type: Speed

Projection: Reserve to Backup

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Another lower level division wide receiver where I don't have enough data at that level to project yet. However, Hogan's size and athleticism are very impressive. Above average

explosiveness, speed, and flexibility. Hogan has the potential to be what people though Da'Rick Rogers was going to be. And his athleticism could help boost him to a long-term starter in the NFL.

Mismatch Type: Size/Athleticism

Projection: Long-term Starter to Potential Pro Bowler

DNP	Flexibility Score: 9.39 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a flexibility score of 9.39 or higher
Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Mack Hollins has decent size and speed. But his production, age and MSA rating are just not getting it done. He could become a backup to reserve wide receiver in the right spot. However, there is just not enough here to see much success even if he was an amazing athlete across the board.

Mismatch Type: Speed

Projection: Reserve to Backup

Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Dupre has above average explosiveness. But his speed and flexibility are akin to Dwayne Jarrett. with less flexibility. He has good production and a MSA rating. However, Dwayne

Jarrett did too. So, while there will be those who will value Dupre highly, I just can't go there with his profile.

Mismatch Type: Explosiveness

Projection: Backup to Long-term Starter

No	All-Pro MSA Rating: 79 or Higher	87% of Multiple All-Pro WRs since the 1969 NFL Draft Class were in the 79 Percentile of MSA or >
No	Pro Bowl MSA Rating: 71 or Higher	88% of Multiple Pro Bowl WRs since the 1969 NFL Draft Class were in the 71 Percentile or >
N/A	6-2 or Taller Arm Length: 32 5/8-Inches	80% of Multiple All-Pro and Pro Bowl WRs at 6-2 or Taller had at least 32 5/8-Inch Arm Length since 1999 NFL Draft Class
Yes	6-1 or Shorter Arm Length: 29 3/4-Inches	100% of Multiple All-Pro and Pro Bowl WRs at 6-1 or Shorter had at least 29 3/4-Inch Arm Length since 1999 NFL Draft Class
Yes	8 7/8-Inch Hand Size	100% of Multiple All-Pro and Pro Bowl WRs had at least 8 7/8-Inch Hand Size since 1999 NFL Draft Class
Yes	5-9 or Taller	100% of Multiple All-Pro and Pro Bowl WRs were at least 5-9 or Taller since the 1999 NFL Draft Class
Yes	Explosive Lower Body Strength Score: 7.19 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had an explosive lower body strength score of 7.19 or higher
Yes	Speed Score: 24.75 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a speed score of 24.75 or higher
Yes	Flexibility Score: 9.39 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a flexibility score of 9.39 or higher
Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Michael Rector is another one of these athletes with little production. People may take a chance on athletic upside. But that production is just not getting done for him. Buy as a backup to reserve. Or look elsewhere to fill your wide receiver needs.

Mismatch Type: Athleticism

Projection: Reserve to Backup

Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Mike Williams has size and length. But his production is just not getting it done. Much higher chance of being a long-term starter than a consistently elite producer. He has above average

athleticism and all the other physical traits people fall in love with. However, being a consistently elite wide receiver is just not in the cards for him especially when you don't participate in agility drills too.

Mismatch Type: Explosiveness/Speed

Projection: Backup to Potential Pro Bowler

Yes	Pro Bowl MSA Rating: 71 or Higher	88% of Multiple Pro Bowl WRs since the 1969 NFL Draft Class were in the 71 Percentile or >
No	6-2 or Taller Arm Length: 32 5/8-Inches	80% of Multiple All-Pro and Pro Bowl WRs at 6-2 or Taller had at least 32 5/8-Inch Arm Length since 1999 NFL Draft Class
N/A	6-1 or Shorter Arm Length: 29 3/4-Inches	100% of Multiple All-Pro and Pro Bowl WRs at 6-1 or Shorter had at least 29 3/4-Inch Arm Length since 1999 NFL Draft Class
Yes	8 7/8-Inch Hand Size	100% of Multiple All-Pro and Pro Bowl WRs had at least 8 7/8-Inch Hand Size since 1999 NFL Draft Class
Yes	5-9 or Taller	100% of Multiple All-Pro and Pro Bowl WRs were at least 5-9 or Taller since the 1999 NFL Draft Class
DNP	Explosive Lower Body Strength Score: 7.19 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had an explosive lower body strength score of 7.19 or higher
Yes	Speed Score: 24.75 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a speed score of 24.75 or higher
DNP	Flexibility Score: 9.39 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a flexibility score of 9.39 or higher
Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Everything that is holding Noah Brown up is his age and strength of schedule he faced. However, his production never took off at any point of his career at Ohio State. He has the size

most scouts look for. But his production is just not there to consider as anything other than a backup wide receiver. And above average speed doesn't help to improve his outlook.

Mismatch Type: Speed

Projection: Reserve to Backup

No	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Noel Thomas has decent production and age. But his overall athleticism and hand size put him in only starter to backup status. And not having great athletic traits with questionable hand size is not a good combo. Value as a backup to reserve caliber receiver and you won't miss.

Mismatch Type: Explosiveness

Projection: Reserve to Backup

Yes	Pro Bowl MSA Rating: 71 or Higher	88% of Multiple Pro Bowl WRs since the 1969 NFL Draft Class were in the 71 Percentile or >
No	6-2 or Taller Arm Length: 32 5/8-Inches	80% of Multiple All-Pro and Pro Bowl WRs at 6-2 or Taller had at least 32 5/8-Inch Arm Length since 1999 NFL Draft Class
N/A	6-1 or Shorter Arm Length: 29 3/4-Inches	100% of Multiple All-Pro and Pro Bowl WRs at 6-1 or Shorter had at least 29 3/4-Inch Arm Length since 1999 NFL Draft Class
Yes	8 7/8-Inch Hand Size	100% of Multiple All-Pro and Pro Bowl WRs had at least 8 7/8-Inch Hand Size since 1999 NFL Draft Class
Yes	5-9 or Taller	100% of Multiple All-Pro and Pro Bowl WRs were at least 5-9 or Taller since the 1999 NFL Draft Class
Yes	Explosive Lower Body Strength Score: 7.19 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had an explosive lower body strength score of 7.19 or higher
Yes	Speed Score: 24.75 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a speed score of 24.75 or higher
Yes	Flexibility Score: 9.39 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a flexibility score of 9.39 or higher
Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Quincy Adeboyejo has the athletic traits of a near elite slot receiver. But his market share production is not getting the job done. Nor is his arm length that is very short for his size. He

could be a decent addition as a backup to spot starter. Who defiantly has some athletic upside, but I'd be wary about his any starter upside due to his production.

Mismatch Type: Speed/Flexibility

Projection: Reserve to Backup

Yes	Speed Score: 24.75 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a speed score of 24.75 or higher
Yes	Flexibility Score: 9.39 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a flexibility score of 9.39 or higher
Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Ricky Seales-Jones has impressive size and length. But his market share production is not there. Along with his MSA Rating not getting it done either. Value as a backup to reserve. Or you will be most likely disappointed in his performance at the NFL level.

Mismatch Type: Size/Explosiveness/Speed

Projection: Reserve to Backup

Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Robert Davis hit every number except for All-Pro MSA. He has top 10 percentile explosiveness, speed, and flexibility for his size. However, he profiles very similarly to Greg Little on

film. Lots of very bad drops. Every number lines up for Davis on paper, but I would caution you to watch most his 2016 season to see if he's more Greg Little vs. Terrell Owens.

Mismatch Type: Size/Athleticism

Projection: Long-term Starter to Pro Bowler

N/A	6-2 or Taller Arm Length: 32 5/8-Inches	80% of Multiple All-Pro and Pro Bowl WRs at 6-2 or Taller had at least 32 5/8-Inch Arm Length since 1999 NFL Draft Class
No	6-1 or Shorter Arm Length: 29 3/4-Inches	100% of Multiple All-Pro and Pro Bowl WRs at 6-1 or Shorter had at least 29 3/4-Inch Arm Length since 1999 NFL Draft Class
Yes	8 7/8-Inch Hand Size	100% of Multiple All-Pro and Pro Bowl WRs had at least 8 7/8-Inch Hand Size since 1999 NFL Draft Class
Yes	5-9 or Taller	100% of Multiple All-Pro and Pro Bowl WRs were at least 5-9 or Taller since the 1999 NFL Draft Class
Yes	Explosive Lower Body Strength Score: 7.19 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had an explosive lower body strength score of 7.19 or higher
Yes	Speed Score: 24.75 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a speed score of 24.75 or higher
Yes	Flexibility Score: 9.39 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a flexibility score of 9.39 or higher
Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Robert Wheelwright has some intriguing athleticism traits. But his production is just not getting it done. And he lacks the length for his height to be a mismatch consistently with his size alone. Thus, I'd value Wheelwright as a reserve to backup only with athletic upside to be a starter.

Mismatch Type: Athleticism

Projection: Reserve to Backup

Yes	Flexibility Score: 9.39 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a flexibility score of 9.39 or higher
Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Rodney Adams has above average speed and long-term starter level production. But players who don't dominant the level of competition he had South Florida, are usually players to avoid. Most wide receivers who dominant that level of competition become average NFL players. And

to not dominant with average athleticism traits is a hard sell as a starter. But he should be viewed as a decent backup to reserve type of prospect.

Mismatch Type: Speed

Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Ryan Switzer tested like Wes Welker as an athlete. And no, it's not a white thing. He tested like a wide receiver who can become an elite slot receiver in the right system. His production

wasn't elite. And Switzer didn't play as tough of a schedule as Welker. But this is one of those moments where Switzer can make a lot of money if he embraces the reality of his athleticism traits.

Mismatch Type: Flexibility

Projection: Backup to Long-term Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Shelton Gibson has the athleticism of Antonio Brown. But he's missing the crucial part of Brown's profile in not being young, or having near elite market share production. However, Gibson can parlay his slot athleticism traits into a long-term starting job. But there are lots of slots in this class

with more proven ability to produce than Gibson. Value as a backup to spot starter in the short term with some athletic upside to be a long-term starter.

Mismatch Type: Speed/Flexibility

Projection: Backup to Long-term Starter

Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Speedy Noil jumped out of the building in Indy this year. But other than and his age, there's few positives here. Significantly below average market share production. And normally players his age have a decent MSA rating, but his production was so poor it negates his age. There will be

many excuses for Noil going forward. However, this isn't Tyreek Hill 2.0, this is a very unproductive SEC wide receiver whose potential is being vastly overblown.

Buy as a backup to reserve only.

Yes	5-9 or Taller	100% of Multiple All-Pro and Pro Bowl WRs were at least 5-9 or Taller since the 1999 NFL Draft Class
Yes	Explosive Lower Body Strength Score: 7.19 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had an explosive lower body strength score of 7.19 or higher
Yes	Speed Score: 24.75 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a speed score of 24.75 or higher
Yes	Flexibility Score: 9.39 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a flexibility score of 9.39 or higher
Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Stacy Coley profiles as a starting speed wide receiver in the mold of Kenny Stills. But like Stills he doesn't have very good market share production and if more of a matchup finder, than a

consistently productive piece. In the right situation, Coley can find success. However, the long-term outlook whether he has some success early or not is not great.

Mismatch Type: Speed

Projection: Backup to Potential Starter

Unknown	6-2 or Taller Arm Length: 32 5/8-Inches	80% of Multiple All-Pro and Pro Bowl WRs at 6-2 or Taller had at least 32 5/8-Inch Arm Length since 1999 NFL Draft Class
Unknown	6-1 or Shorter Arm Length: 29 3/4-Inches	100% of Multiple All-Pro and Pro Bowl WRs at 6-1 or Shorter had at least 29 3/4-Inch Arm Length since 1999 NFL Draft Class
Unknown	8 7/8-Inch Hand Size	100% of Multiple All-Pro and Pro Bowl WRs had at least 8 7/8-Inch Hand Size since 1999 NFL Draft Class
Yes	5-9 or Taller	100% of Multiple All-Pro and Pro Bowl WRs were at least 5-9 or Taller since the 1999 NFL Draft Class
Yes	Explosive Lower Body Strength Score: 7.19 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had an explosive lower body strength score of 7.19 or higher
Yes	Speed Score: 24.75 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a speed score of 24.75 or higher
Yes	Flexibility Score: 9.39 or higher	100% of Multiple All-Pro and Pro Bowl WRs since 1999 had a flexibility score of 9.39 or higher
Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Tanner Gentry has an intriguing data profile. Above average production and athleticism traits. He misses the mark of All-Pro indicators due to his age. However, there is more than enough here pointing toward a long-term starter to even Pro Bowl caliber player. But some concern should be seen with his below average flexibility.

Mismatch Type: Explosiveness/Speed

Projection: Long-term Starter to Potential Pro Bowler

Yes	Athleticism Score: 54.16 or higher	94% of Multiple All-Pro and Pro Bowl WRs since 1999 had at least one athleticism score (explosive lower body, speed, or flexibility) of 54.16 or higher.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Taywan Taylor has an excellent profile across the board. Above average explosiveness, speed, and elite flexibility traits. In addition to elite market share production. Taylor has a very good shot at becoming a long-term starter to Pro Bowl caliber player based on his profile. The

only concern is level of competition. However, his MSA is high enough with his athletic attributes to make it a minor concern.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Travin Dural is not a great athlete. But he's proven in the past to put up very good production against top competition. So, while some may right off Dural purely on athletic ability. There

is a chance he could carve out a role as a starter based on his production in college. But I'd still bet on Dural becoming a backup vs. a long-term starter.

Mismatch Type: None

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Travis Rudolph may have made a huge mistake declaring early for the NFL draft. Below average explosiveness, speed, and flexibility. To go along with average market share production

that doesn't even meet the long-term starter threshold. Rudolph has bare minimum starter athleticism. But everything else points toward backup to reserve caliber play in the future.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Trent Taylor has same athletic profile as Wes Welker excluding race. Or Taylor Gabriel as a more recent example. But his overall market share production for the level of competition is not

impressive. I'd expect Taylor to make a roster as a team's backup to long-term slot receiver. However, there are a few decent sized red flags in his profile.

Mismatch Type: Flexibility

Projection: Backup to Long-term Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Victor Bolden has a slot wide receiver athletic profile. But his overall picture from a production and physical attribute side is not bright. He has decent age to develop into more than a backup potentially. However, I'd expect a backup to reserve slot receiver in Bolden's case future wise.

Mismatch Type: Flexibility

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Zach Pascal has a solid profile as a long-term starter. He has above average explosiveness, speed, and flexibility for his size. But his overall age and the schedule he faced in college

drop his upside potential. No much of a chance he develops into an All-Pro or Pro Bowl producer. However, he'd be a great value in the right spot.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Zay Jones has one of the stronger profiles in this class. Elite market share production and flexibility for his size. With above average indicators across the board. The only aspects that knock

him are his arm length is short for his height. But there is a very high chance Jones could have a Jordy Nelson like career in the NFL. Jones should be considered one of the safest wide receivers in this class.

Mismatch Type: Athleticism

Projection: Long-term Starter to Pro Bowler

TE

There is a war going on in the NFL scouting community about what a tight end looks like and the role a tight end is supposed to have. Most scouts and analysts I've spoken with, view elite tight ends as long and tall, but that historically has been a more recent phenomenon. And in fact, most All-Pro tight ends since the 1963 NFL draft class were of the shorter variety. Yet shorter tight ends in this era seem to be either underutilized, or they are converted into fullbacks. It does make sense why smaller tight ends who may struggle in blocking assignments get pushed aside for offensive tackle sized behemoths.

However, I want people to not forget that smaller tight ends are people too. They can have substantial impacts in the passing game with recent examples of Aaron Hernandez and Jordan Reed. It's all just a matter of the talent these smaller tight ends possess. And of course, their passing yardage market share production. Which at the tight end position, the same correlations favoring higher end passing yardage market share at wide receiver exist in the tight end position as well.

Despite a couple recent examples of tight ends like Jordan Cameron, Jimmy Graham and Antonio Gates who have had lots of success in the NFL despite minimal to zero collegiate production. This is a very recent trend. And those tight ends like Graham had certain athletic and physical characteristics that are extremely uncommon at the position. In other words, while I acknowledge that classic size and athleticism traits should be aspects you should be looking for. I wouldn't bet my job on every tight end who has similar size and athletic traits.

There is a reason that players like Cameron, Graham and Gates were lower round draft picks, or undrafted free agents. And just because there is a recent trend of success finding tight ends who fit a very small criterion. It shouldn't prompt you to throw all risk aversion out the window. Production still matters at tight end. But understanding the nuances of evaluation can hopefully give you a better perspective on how to find and value tight ends in the future.

The profiles below serve as a test for tight end prospects on age, production, strength of schedule and physical thresholds for the recent trends at the position. So, enjoy the profiles below and I hope they can give you a wider perspective on the class going forward.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Adam Sheehan's production from the FCS must excluded due to his level of competition. However, it's clear from a physical attribute and athletic perspective that he could develop into an above average tight end. Sheehan is a big, fast, explosive, and surprisingly flexible prospect. A more stable production sample from the lower level division would make his projection easier. But for now, I'd value as a potential long-term starting tight end with Pro Bowl upside.

Scheme Fit: Inline

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Antony Auclair has impressive physical measures. Elite size, length, and hand size. However, his below average speed and flexibility. In addition to production from a foreign country. Thus, I'd value as a reserve to backup only with slight potential to start based on physical measures.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Billy Brown's production must be excluded due to his level of competition. But his athlete profile is not a disaster. He's more of a "move" tight end than a true inline, which the NFL has been passive in utilizing. However, he could become a long-term starter in the right system.

Scheme Fit: H-Back

Projection: Backup to Long-term Starter

Yes	All-Pro Hand Size: 10 1/2 Inches	100% of Multiple All-Pro TEs since the 1999 NFL Draft Class had 10 1/2 Inch Hand Size or >
Yes	Pro Bowl Hand Size: 9 5/8 Inches	100% of Multiple Pro Bowl TEs since the 1999 NFL Draft Class had 9 5/8 Inch Hand Size or >
Yes	Long-term Starter Hand Size: 9 Inches	100% of 64 Start or more TEs since the 1999 NFL Draft Class had 9 Inch Hand Size or >
Yes	Explosive Lower Body Strength Score: 35.5 or higher	100% of multiple All-Pro and Pro Bowl TEs since 1998 had at least an explosive lower body strength score of 35.5
Yes	Speed Score: 78.89 or higher	100% of multiple All-Pro and Pro Bowl TEs since 1998 had at least a speed score of 78.89 or higher
Yes	Flexibility Score: 57.82 or higher	100% of multiple All-Pro and Pro Bowl TEs since 1998 had a flexibility score of 57.82 or higher
Yes	Athleticism Score: 78.89 or higher	100% of multiple All-Pro and Pro Bowl TEs since 1998 had at least one athleticism score of 78.89 or higher

No	Bench: 22 or higher	86% of multiple All-Pro and Pro Bowl TEs since 1998 had at least 22 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Bucky Hodges has a very solid overall profile. Above average production and athleticism. With impressive size, as well. But his bench numbers are not getting it done in terms of projecting high quality production in the NFL. However, the general comparisons to Jimmy Graham are not far off.

Scheme Fit: H-Back

Projection: Long-term Starter to Potential Pro Bowler

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Cethan Carter has above average speed for his size. But his overall profile is just not special. He's another one of these "move" tight ends that the NFL just doesn't know what to do with. Below average production with just okay physical and athletic dimensions is not ideal. Value as a backup to reserve, or you will lose money.

Scheme Fit: H-Back

Projection: Reserve to Backup

2017 NFL Draft Profiles

Cole Hikutini

Tight End

Team	Louisville
Age (On Draft Day)	22.87

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Darrell Daniels has intriguing athleticism traits. Above average speed and flexibility for his size. However, his market share production and overall size as a "move" tight end are not great signs. He has the athleticism to become a long-term starter in the right situation. But I'd value as a backup to spot starter with athletic upside until he proves growth at the NFL level.

Scheme Fit: H-Back

Projection: Backup to Spot Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: David Njoku is off in a few areas as a multiple All-Pro tight end. But his overall age, athleticism, and production point toward a multiple Pro Bowl caliber tight end. And he's one of the few tight ends to hit an All-Pro MSA rating over 80. All signs point toward great things for Njoku. However, there are a few things off to make the claim that he's a truly generational talent.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: It's hard to determine much from Saubert's lower level division production. However, what we do know is he has great size and physical attributes for the position. Along with above average explosiveness and speed. He's very good tight end prospect in a class filled to the brim with them. He could be a substantial investment in the later rounds.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Evan Engram is a freak athlete with very good production. But as a "move" tight end, I always worry about the team they end up on. However, Engram in the right spot can be a multiple Pro Bowl level talent. He just needs to go to an offensive system that will feature him. If that happens on draft day, expect great things going forward.

Scheme Fit: H-Back

Projection: Long-term Starter to Pro Bowler

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: George Kittle has a great shot of becoming a long-term starter based on his profile. Above average explosiveness and speed as an athlete. But his overall production for his age and strength of schedule is not great for quality projection. Not being a full sized inline guy also limits him a bit in terms of upside. However, his blocking prowess may help guarantee him as a long-term starter in projection.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Gerald Everett has a solid profile across the board. But the concerns stem from hand size not hitting the long-term starter threshold. And he's another one of these "move" tight ends that could be without a position to be productive. He has the athleticism to be a decent starter. However, it will all depend on whether a team wants to value him as a pure big slot receiver.

No	Bench: 22 or higher	86% of multiple All-Pro and Pro Bowl TEs since 1998 had at least 22 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Other than having decent physical attributes and market share production. Hayden Plinke is below average across the board. Below average athleticism and age. There is a very small chance he becomes a long-term starter. Let alone a backup type with how unathletic he is. Value as a reserve to backup type in the future.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jake Butt being injured during the draft process make his projection harder. However, most of the important aspects in projection are known. He's young and productive. In addition to solid physical attributes. He's not quite a Pro Bowl All-Pro mismatch in terms of arm length. But Jake Butt should at the very least become a long-term starter at the tight end position.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jeremy Sprinkle has some very strong physical attributes in terms of size and length. However, his production and athleticism traits aren't checking the boxes for him. He has the profile of a long-term starter. But not a consistently quality tight end producer. Value as a backup to long-term potential starter only.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jonnu Smith is a "move" tight end with a great profile pointing toward a starter in the right scheme. He has above average athleticism and production. In addition to a solid MSA Rating despite playing less than ideal competition. He can become a consistent threat in the right spot. But buyer beware with "move" tight ends that go to less than ideal offenses.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Michael Roberts has a solid profile as a long-term starter. But his production and athleticism traits don't quite hit All-Pro or Pro Bowl levels. Along with his market share production against weak competition being lackluster. He has great physical attributes with impressive hand size. However, he's likely to be more of a backup to potential long-term starter than a quality player in the NFL.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: O.J. Howard has impressive athletic and physical attributes. But there are a bunch of flags in terms of becoming a multiple All-Pro or Pro Bowl player. He didn't meet the All-Pro or Pro Bowl explosiveness threshold. And his market share production is only Pro Bowl level. He has some very impressive traits as an athlete and size that could turn him into a Pro Bowl player, but he simply doesn't have enough evidence to make the Jimmy Graham argument here.

No	Athleticism Score: 78.89 or higher	100% of multiple All-Pro and Pro Bowl TEs since 1998 had at least one athleticism score of 78.89 or higher

Yes	Bench: 22 or higher	86% of multiple All-Pro and Pro Bowl TEs since 1998 had at least 22 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Pharaoh Brown has a decent profile as a potential starting tight end. But his overall production is not ideal. He has the size and length to be a formidable matchup. However, he hasn't proved he can be dominant with these abilities. In addition to below average speed and flexibility for his size. Thus, I'd project as a backup to potential starter only.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Scott Orndoff's age and athleticism are not where they need to be in terms of quality outcomes. However, his market share production and above average flexibility are strong enough to consider long-term starter status. There are some positives to point to in Orndoff's profile. But I ultimately would value him as a backup to reserve type with long-term starter upside.

OL

Offensive line scouting remains one of the most misunderstood and overly complicated positions to evaluate in all of football. It's another one of the positions where scouts break up into camps of film/technique vs. athleticism/physical characteristics. When both distinct categories of information matter. A linemen's ability to implement proper technique, display a high football I.Q. and a prerequisite amount of size/athleticism matter. And I find it foolish to dismiss relevant information based purely on an ideological or philosophical standpoint.

Relevant information relating to size and arm length. People often assign certain size or arm length requirements to offensive line positions without ever stopping to see if they matter. And without even knowing what the actual baselines to the position are. I hear an awful lot of snickering about a tackle prospect having short arm length when that tackle has above average to average arm length. What is the point of reporting arm length data when you don't have a clue on what it means?

Well there is a point. And it's simply this, height has much higher correlations to quality and quantity thresholds at every offensive line position compared to their peers. While arm length is an overrated piece of data. Furthermore, there is a point in which there is diminishing value with shorter arm length, but we are talking bottom ten to fifteen percentile. Most offensive linemen will test fifteen percentile or higher in terms of arm length making the knee jerk reactions to most arm length information irrelevant.

At this point, you may be asking yourself okay if arm length doesn't matter as much as height, then why does height matter? Leverage. Offensive linemen who are taller and can bend will have more leverage potential than their shorter counterparts. Which is the essence of offensive line play. Along with the advantages of having a longer and wider body that acts like a bigger shield.

And while there are disadvantages to being a tall offensive lineman who can't bend. Finding the ones who can bend with great technique, athleticism and football intelligence gives you all the necessary tools to be great. The profiles below will give you a sense of the types of positions each offensive lineman could best succeed based on physical characteristics. May each piece aid in figuring out where each player can fit, and I hope it can drown out the needless noise about arm length plus other irrelevant OL nonsense

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Brandon Kublanow has a solid starting center profile. Above average explosiveness and speed. He has below average flexibility. His overall profile as a zone blocking center can work. He will struggle in pass protection due to his flexibility issues, but there are enough positives to project as a backup to long-term starter in a ZBS.

No	All-Pro Speed Score: 87.14 or Higher	100% of Multiple All-Pro OCs since the 1996 NFL Draft Class had a speed score of 87.14 or higher
Yes	Pro Bowl Speed Score: 47.02 or Higher	75% of Multiple Pro Bowl OCs since the 1996 NFL Draft Class had a speed score of 47.02 or higher
Yes	Starter Speed Score: 12.22 or Higher	100% of 64 start or higher OCs since the 1996 NFL Draft Class had at least a speed score of 12.22 or higher
No	All-Pro Flexibility Score: 91.97 or Higher	100% of Multiple All-Pro OCs since the 1996 NFL Draft Class had a flexibility score of 91.97 or higher
Yes	Pro Bowl Flexibility Score: 34.78 or Higher	100% of Multiple Pro Bowl OCs since the 1996 NFL Draft Class had a flexibility score of 34.78 or higher
Yes	Starter Flexibility Score: 13.71 or Higher	100% of 64 start or higher OCs since the 1996 NFL Draft Class had at least a speed score of 13.71 or higher
No	All-Pro/Pro Bowl Athleticism Score: 65.24 or Higher	80% of multiple All-Pro and Pro Bowl OCs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 65.24 or higher
Yes	All-Pro and Pro Bowl Bench: 20 or more	100% of multiple All-Pro and Pro Bowl OCs since the 1996 NFL Draft class had at least 20 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Brian Gaia is very close to a Pro Bowl level center. He has above average athleticism across the board. He lacks ideal size at 292 pounds. However, Gaia has a lot of positives to look to. I'd project as backup to long-term starter with a decent shot at becoming a Pro Bowl outlier.

Scheme Fit: ZBS

Projection: Backup to Potential Pro Bowler

No	All-Pro and Pro Bowl Bench: 20 or more	100% of multiple All-Pro and Pro Bowl OCs since the 1996 NFL Draft class had at least 20 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Chase Rouiller has some red flags in his profile with age and his speed score. However, his flexibility score is high enough to consider as a long-term starter. He is not athletic enough to ever be amazing getting to LBs at the second level. But based on his athleticism traits, he has the potential to be above average in terms of leverage. Put him in a system that minimizes his moments in space, and he could become a starter long-term.

Scheme Fit: Power

Projection: Backup to Long-term Starter

Yes	All-Pro/Pro Bowl Athleticism Score: 65.24 or Higher	80% of multiple All-Pro and Pro Bowl OCs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 65.24 or higher
Yes	All-Pro and Pro Bowl Bench: 20 or more	100% of multiple All-Pro and Pro Bowl OCs since the 1996 NFL Draft class had at least 20 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Ethan Pocic has the athletic profile of a long-term starter to Pro Bowl level interior linemen. He doesn't quite have the right elements to be great at tackle. However, he has the speed to work in power schemes and above average explosiveness to fit in a zone blocking system. It's just doesn't have the right combination to ever become elite inside. Leverage will always be an issue with him due to his below average flexibility, but he has a decent shot at becoming a long-term option as a guard or center.

Yes	All-Pro and Pro Bowl Bench: 20 or more	100% of multiple All-Pro and Pro Bowl OCs since the 1996 NFL Draft class had at least 20 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jon Toth failed two athletic thresholds for a long-term starting center in speed and flexibility. Those concerns show up on film as well. He has positives from his bench press and overall size/height. However, I would not view Toth as anything other than a backup to reserve caliber center.

Yes	Starter Flexibility Score: 13.71 or Higher	100% of 64 start or higher OCs since the 1996 NFL Draft Class had at least a speed score of 13.71 or higher
No	All-Pro/Pro Bowl Athleticism Score: 65.24 or Higher	80% of multiple All-Pro and Pro Bowl OCs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 65.24 or higher
Yes	All-Pro and Pro Bowl Bench: 20 or more	100% of multiple All-Pro and Pro Bowl OCs since the 1996 NFL Draft class had at least 20 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Profile: Solid profile as a potential long-term starting center. Doesn't have any athletic marks indicating someone with potential to ever be a high-quality center. But he has enough speed and flexibility to work well in a power scheme. He should be valued as a backup to potential long-term starter.

No	All-Pro/Pro Bowl Athleticism Score: 65.24 or Higher	80% of multiple All-Pro and Pro Bowl OCs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 65.24 or higher
Yes	All-Pro and Pro Bowl Bench: 20 or more	100% of multiple All-Pro and Pro Bowl OCs since the 1996 NFL Draft class had at least 20 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Pat Elflein has an uneven profile as a center. He has below average athleticism across the board. But he reasonable explosiveness, speed and especially flexibility traits for a potential starter. There have not been that many successful outcomes with a center this unathletic. However, if the film checks out, he should be viewed at most as a potential long-term starter.

Yes	All-Pro and Pro Bowl Bench: 20 or more	100% of multiple All-Pro and Pro Bowl OCs since the 1996 NFL Draft class had at least 20 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Xavier Dampeer has a long-term starter profile at center. Above average explosiveness and speed. In addition to a solid size profile. His lack of flexibility will make him inefficient as a pass blocker. However, a team that runs the ball more often could benefit from Dampeer. He has the goods to be near elite as a zone blocking or even power blocking center in the run game.

Prospect CHECKLIST

No	All-Pro Age Threshold 23.5	100% of Multiple All-Pro OGs were at most 23.5 on draft day since the 1996 NFL Draft Class
Yes	All-Pro OG Height: 6-3 or Taller	100% of Multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft Class were 6-3 or Taller
Yes	Long-term starter OG Height: 6-2 or Taller	100% of 64 Start or more OGs since the 1996 NFL Draft Class were 6-2 or Taller
Unknown	All-Pro OG Arm Length: 31 3/4-Inches	100% of Multiple All-Pro OGs since the 1996 NFL Draft Class had 31 3/4-Inch Arm Length
Unknown	Long-term starter Arm Length: 31-Inches	100% of 64 Start or more OGs since the 1996 NFL Draft Class had 31-Inch Arm Length or longer
Yes	All-Pro/Pro Bowl Explosive Lower Body Strength: 40.59 or	100% of Multiple All-Pro and Pro Bowl

	Higher	OGs since the 1996 NFL Draft Class had an explosive lower body strength score of 40.59 or higher
Yes	Starter Explosive Lower Body Strength Score: 7.46 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least an explosive lower body strength score of 7.46 or higher
No	All-Pro Speed Score: 76.84 or Higher	100% of Multiple All-Pro OGs since the 1996 NFL Draft Class had a speed score of 76.84 or higher
No	Pro Bowl Speed Score: 46.73 or Higher	100% of Multiple Pro Bowl OGs since the 1996 NFL Draft Class had a speed score of 46.73 or higher
Yes	Starter Speed Score: 10.18 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least a speed score of 10.18 or higher
No	All-Pro Flexibility Score: 51.11 or Higher	100% of Multiple All-Pro OGs since the 1996 NFL Draft Class had a flexibility score of 51.11 or higher
No	Pro Bowl Flexibility Score: 45.19 or Higher	100% of Multiple Pro Bowl OGs since the 1996 NFL Draft Class had a flexibility score of 45.19 or higher
Yes	Starter Flexibility Score: 12.07 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least a speed score of 12.07 or higher
No	All-Pro/Pro Bowl Athleticism Score: 76.26 or Higher	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 76.26 or higher
Yes	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Wahrby has solid explosiveness to fit in a zone blocking scheme. But he is another lineman who lacks the speed and flexibility to fit outside of a ZBS. His age is also a bit up there as well. Thus, I'd value as backup to spot starter.

Scheme Fit: Zone

Projection: Backup to Spot Starter

Flexibility Score	37.55
Bench	24

Prospect CHECKLIST

Yes	All-Pro Age Threshold 23.5	100% of Multiple All-Pro OGs were at most 23.5 on draft day since the 1996 NFL Draft Class
Yes	All-Pro OG Height: 6-3 or Taller	100% of Multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft Class were 6-3 or Taller
Yes	Long-term starter OG Height: 6-2 or Taller	100% of 64 Start or more OGs since the 1996 NFL Draft Class were 6-2 or Taller
Yes	All-Pro OG Arm Length: 31 3/4-Inches	100% of Multiple All-Pro OGs since the 1996 NFL Draft Class had 31 3/4-Inch Arm Length
Yes	Long-term starter Arm Length: 31-Inches	100% of 64 Start or more OGs since the 1996 NFL Draft Class had 31-Inch Arm Length or longer
No	All-Pro/Pro Bowl Explosive Lower Body Strength: 40.59 or	100% of Multiple All-Pro and Pro Bowl OGs

	Higher	since the 1996 NFL Draft Class had an explosive lower body strength score of 40.59 or higher
No	Starter Explosive Lower Body Strength Score: 7.46 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least an explosive lower body strength score of 7.46 or higher
No	All-Pro Speed Score: 76.84 or Higher	100% of Multiple All-Pro OGs since the 1996 NFL Draft Class had a speed score of 76.84 or higher
Yes	Pro Bowl Speed Score: 46.73 or Higher	100% of Multiple Pro Bowl OGs since the 1996 NFL Draft Class had a speed score of 46.73 or higher
Yes	Starter Speed Score: 10.18 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least a speed score of 10.18 or higher
No	All-Pro Flexibility Score: 51.11 or Higher	100% of Multiple All-Pro OGs since the 1996 NFL Draft Class had a flexibility score of 51.11 or higher
No	Pro Bowl Flexibility Score: 45.19 or Higher	100% of Multiple Pro Bowl OGs since the 1996 NFL Draft Class had a flexibility score of 45.19 or higher
Yes	Starter Flexibility Score: 12.07 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least a speed score of 12.07 or higher
No	All-Pro/Pro Bowl Athleticism Score: 76.26 or Higher	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 76.26 or higher
Yes	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Avery Gennesy failed one athletic threshold in explosiveness. And came in with only starter level flexibility for his size. There is a possibility that he could become a long-term starter if the opportunity presents itself. But with virtually no shot at becoming a high-quality starter. It's best to

focus on other guards with much higher chances of success. Thus, I'd value Gennesy as a reserve to backup caliber guard in this class.

Scheme Fit: Power

Projection: Reserve to Backup

Yes	Starter Flexibility Score: 12.07 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least a speed score of 12.07 or higher
Yes	All-Pro/Pro Bowl Athleticism Score: 76.26 or Higher	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 76.26 or higher
Yes	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Ben Braden is one of the most athletic offensive linemen in this draft class. He has impressive size and length. In addition to a fantastic combination of above average explosiveness,

speed, and flexibility. He has the potential to be elite in a power or zone blocking system. And being more athletic than Cam Robinson, he could even be a decent swing tackle in a pinch.

However, you slice it, Ben Braden should be one of the more sought after linemen in this draft class.

Yes	Long-term starter Arm Length: 31-Inches	100% of 64 Start or more OGs since the 1996 NFL Draft Class had 31-Inch Arm Length or longer
Yes	All-Pro/Pro Bowl Explosive Lower Body Strength: 40.59 or	100% of Multiple All-Pro and Pro Bowl OGs

	Higher	since the 1996 NFL Draft Class had an explosive lower body strength score of 40.59 or higher
Yes	Starter Explosive Lower Body Strength Score: 7.46 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least an explosive lower body strength score of 7.46 or higher
No	All-Pro Speed Score: 76.84 or Higher	100% of Multiple All-Pro OGs since the 1996 NFL Draft Class had a speed score of 76.84 or higher
Yes	Pro Bowl Speed Score: 46.73 or Higher	100% of Multiple Pro Bowl OGs since the 1996 NFL Draft Class had a speed score of 46.73 or higher
Yes	Starter Speed Score: 10.18 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least a speed score of 10.18 or higher
Yes	All-Pro Flexibility Score: 51.11 or Higher	100% of Multiple All-Pro OGs since the 1996 NFL Draft Class had a flexibility score of 51.11 or higher
Yes	Pro Bowl Flexibility Score: 45.19 or Higher	100% of Multiple Pro Bowl OGs since the 1996 NFL Draft Class had a flexibility score of 45.19 or higher
Yes	Starter Flexibility Score: 12.07 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least a speed score of 12.07 or higher
Yes	All-Pro/Pro Bowl Athleticism Score: 76.26 or Higher	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 76.26 or higher
Yes	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Corey Levin checks all the boxes as an above average power guard. And he's only about a point away from an All-Pro speed score as well. He has enough explosiveness to fit in a zone

blocking scheme as well. However, his above average speed and flexibility has proven be effective in power schemes. Value as a potential Pro Bowl guard prospect and you will be rewarded.

Scheme Fit: Any

Projection: Long-term Starter to Pro Bowler

Yes	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Danny Isidora has some inconsistencies in his profile. But overall, he has top ten percentile speed. In addition to explosiveness and flexibility traits that meet the thresholds for above

average guard play. Isidora a less explosive/flexible version of Mike Iupati. He will have his fair share of weaknesses in pass protection, but if he goes to a run heavy offense, good things can happen.

Yes	All-Pro/Pro Bowl Athleticism Score: 76.26 or Higher	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 76.26 or higher
Yes	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Dorian Johnson has All-Pro/Pro Bowl level explosiveness for his size. However, his he failed to meet the minimum flexibility threshold for long-term starters. And he failed to meet quality thresholds in speed. There is a chance that his main athleticism trait in explosiveness can be used in a

zone blocking scheme. But I would value as a backup to potential long-term starter unless a verifiable change in his status occurs.

Scheme Fit: Zone

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Erik Austell has a solid starting guard profile. Above average explosiveness and speed, with below average flexibility. Austell's best fit is in a zone blocking scheme, but he will never

be elite in that scheme due to his flexibility limitations. If moved to center, he would be almost identical to Ethan Pocic's outlook with less flexibility. Value as a backup to potential long-term starter at either guard or center.

Scheme Fit: Zone

Projection: Backup to Potential Starter

Yes	All-Pro/Pro Bowl Explosive Lower Body Strength: 40.59 or	100% of Multiple All-Pro and Pro Bowl

	Higher	OGs since the 1996 NFL Draft Class had an explosive lower body strength score of 40.59 or higher
Yes	Starter Explosive Lower Body Strength Score: 7.46 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least an explosive lower body strength score of 7.46 or higher
No	All-Pro Speed Score: 76.84 or Higher	100% of Multiple All-Pro OGs since the 1996 NFL Draft Class had a speed score of 76.84 or higher
Yes	Pro Bowl Speed Score: 46.73 or Higher	100% of Multiple Pro Bowl OGs since the 1996 NFL Draft Class had a speed score of 46.73 or higher
Yes	Starter Speed Score: 10.18 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least a speed score of 10.18 or higher
Yes	All-Pro Flexibility Score: 51.11 or Higher	100% of Multiple All-Pro OGs since the 1996 NFL Draft Class had a flexibility score of 51.11 or higher
Yes	Pro Bowl Flexibility Score: 45.19 or Higher	100% of Multiple Pro Bowl OGs since the 1996 NFL Draft Class had a flexibility score of 45.19 or higher
Yes	Starter Flexibility Score: 12.07 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least a speed score of 12.07 or higher
No	All-Pro/Pro Bowl Athleticism Score: 76.26 or Higher	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 76.26 or higher
Yes	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Ethan Cooper has a nice profile as a long-term starting guard. Above average speed and flexibility with enough explosiveness. Areas to nitpick are he doesn't have elite speed and is

shorter than most guards. However, every other area matches up well as a long-term starter. He should be valued as such in a power scheme.

Scheme Fit: Power

Projection: Backup to Long-term Starter

Yes	All-Pro OG Height: 6-3 or Taller	100% of Multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft Class were 6-3 or Taller
Yes	Long-term starter OG Height: 6-2 or Taller	100% of 64 Start or more OGs since the 1996 NFL Draft Class were 6-2 or Taller
Yes	All-Pro OG Arm Length: 31 3/4-Inches	100% of Multiple All-Pro OGs since the 1996 NFL Draft Class had 31 3/4-Inch Arm Length
Yes	Long-term starter Arm Length: 31-Inches	100% of 64 Start or more OGs since the 1996 NFL Draft Class had 31-Inch Arm Length or longer
Yes	All-Pro/Pro Bowl Explosive Lower Body Strength: 40.59 or	100% of Multiple All-Pro and Pro Bowl OGs

	Higher	since the 1996 NFL Draft Class had an explosive lower body strength score of 40.59 or higher
Yes	Starter Explosive Lower Body Strength Score: 7.46 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least an explosive lower body strength score of 7.46 or higher
Yes	All-Pro Speed Score: 76.84 or Higher	100% of Multiple All-Pro OGs since the 1996 NFL Draft Class had a speed score of 76.84 or higher
Yes	Pro Bowl Speed Score: 46.73 or Higher	100% of Multiple Pro Bowl OGs since the 1996 NFL Draft Class had a speed score of 46.73 or higher
Yes	Starter Speed Score: 10.18 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least a speed score of 10.18 or higher
Yes	All-Pro Flexibility Score: 51.11 or Higher	100% of Multiple All-Pro OGs since the 1996 NFL Draft Class had a flexibility score of 51.11 or higher
Yes	Pro Bowl Flexibility Score: 45.19 or Higher	100% of Multiple Pro Bowl OGs since the 1996 NFL Draft Class had a flexibility score of 45.19 or higher
Yes	Starter Flexibility Score: 12.07 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least a speed score of 12.07 or higher
No	All-Pro/Pro Bowl Athleticism Score: 76.26 or Higher	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 76.26 or higher
Yes	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Eluemunor has near elite athleticism to go along with solid physical measures. His best fit is inside due to his height. However, there is a lot of potential to consider based on his initial

testing including a very successful bench performance. He should be considered the top offensive linemen to keep track of from Texas A&M this draft season.

Scheme Fit: Any

Projection: Long-term Starter to Pro Bowler

No	Pro Bowl Speed Score: 46.73 or Higher	100% of Multiple Pro Bowl OGs since the 1996 NFL Draft Class had a speed score of 46.73 or higher
Yes	Starter Speed Score: 10.18 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least a speed score of 10.18 or higher
No	All-Pro Flexibility Score: 51.11 or Higher	100% of Multiple All-Pro OGs since the 1996 NFL Draft Class had a flexibility score of 51.11 or higher
No	Pro Bowl Flexibility Score: 45.19 or Higher	100% of Multiple Pro Bowl OGs since the 1996 NFL Draft Class had a flexibility score of 45.19 or higher
Yes	Starter Flexibility Score: 12.07 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least a speed score of 12.07 or higher
No	All-Pro/Pro Bowl Athleticism Score: 76.26 or Higher	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 76.26 or higher
Yes	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jordan Morgan has a potential long-term starting profile. Above average explosiveness with well-rounded physical measures. His biggest issues are below average speed and

flexibility that severely limit his upside and the scheme he can be most successful in. In a zone blocking scheme, Morgan can be a functional starter. Thus, I'd value Morgan as a backup to potential long-term starter in a ZBS scheme.

Scheme Fit: Zone

Projection: Backup to Potential Starter

Yes	All-Pro/Pro Bowl Athleticism Score: 76.26 or Higher	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 76.26 or higher
No	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Lincoln Howard has a very interesting athletic profile. Above average athleticism across the board with almost elite speed. He can fit in a variety of schemes. But a power scheme would

maximize his speed as a pulling guard. Thus, I'd project as a backup to long-term starter in any scheme.

Scheme Fit: Any

Projection: Backup to Long-term Starter

	Higher	OGs since the 1996 NFL Draft Class had an explosive lower body strength score of 40.59 or higher
Yes	Starter Explosive Lower Body Strength Score: 7.46 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least an explosive lower body strength score of 7.46 or higher
Yes	All-Pro Speed Score: 76.84 or Higher	100% of Multiple All-Pro OGs since the 1996 NFL Draft Class had a speed score of 76.84 or higher
Yes	Pro Bowl Speed Score: 46.73 or Higher	100% of Multiple Pro Bowl OGs since the 1996 NFL Draft Class had a speed score of 46.73 or higher
Yes	Starter Speed Score: 10.18 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least a speed score of 10.18 or higher
No	All-Pro Flexibility Score: 51.11 or Higher	100% of Multiple All-Pro OGs since the 1996 NFL Draft Class had a flexibility score of 51.11 or higher
No	Pro Bowl Flexibility Score: 45.19 or Higher	100% of Multiple Pro Bowl OGs since the 1996 NFL Draft Class had a flexibility score of 45.19 or higher
Yes	Starter Flexibility Score: 12.07 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least a speed score of 12.07 or higher
Yes	All-Pro/Pro Bowl Athleticism Score: 76.26 or Higher	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 76.26 or higher
Yes	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Marcus Piechowski has some intriguing qualities. Above average speed and decent size for a guard. But his below average explosiveness and flexibility hurt his versatility. He could be

utilized well in a power scheme asking him to get out in space. However, I would only project as a backup to spot starter due to not having decent explosiveness or flexibility.

Scheme Fit: Power

Projection: Backup to Spot Starter

Yes	All-Pro/Pro Bowl Explosive Lower Body Strength: 40.59 or	100% of Multiple All-Pro and Pro Bowl OGs

	Higher	since the 1996 NFL Draft Class had an explosive lower body strength score of 40.59 or higher
Yes	Starter Explosive Lower Body Strength Score: 7.46 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least an explosive lower body strength score of 7.46 or higher
No	All-Pro Speed Score: 76.84 or Higher	100% of Multiple All-Pro OGs since the 1996 NFL Draft Class had a speed score of 76.84 or higher
No	Pro Bowl Speed Score: 46.73 or Higher	100% of Multiple Pro Bowl OGs since the 1996 NFL Draft Class had a speed score of 46.73 or higher
Yes	Starter Speed Score: 10.18 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least a speed score of 10.18 or higher
No	All-Pro Flexibility Score: 51.11 or Higher	100% of Multiple All-Pro OGs since the 1996 NFL Draft Class had a flexibility score of 51.11 or higher
No	Pro Bowl Flexibility Score: 45.19 or Higher	100% of Multiple Pro Bowl OGs since the 1996 NFL Draft Class had a flexibility score of 45.19 or higher
Yes	Starter Flexibility Score: 12.07 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least a speed score of 12.07 or higher
No	All-Pro/Pro Bowl Athleticism Score: 76.26 or Higher	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 76.26 or higher
Yes	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Nate Theaker is another lower level division lineman with a potential long-term starter profile. Above average explosiveness with great height and overall physical dimensions. His

issues are below average speed and flexibility. Best fit is a zone blocking scheme, because of his explosiveness. Value as backup to potential long-term starter in a ZBS scheme.

Scheme Fit: Zone

Projection: Backup to Potential Starter

Yes	Starter Speed Score: 10.18 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least a speed score of 10.18 or higher
Yes	All-Pro Flexibility Score: 51.11 or Higher	100% of Multiple All-Pro OGs since the 1996 NFL Draft Class had a flexibility score of 51.11 or higher
Yes	Pro Bowl Flexibility Score: 45.19 or Higher	100% of Multiple Pro Bowl OGs since the 1996 NFL Draft Class had a flexibility score of 45.19 or higher
Yes	Starter Flexibility Score: 12.07 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least a speed score of 12.07 or higher
Yes	All-Pro/Pro Bowl Athleticism Score: 76.26 or Higher	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 76.26 or higher
Yes	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Nico Siragusa has the profile of a potentially elite zone blocking guard. Elite explosiveness with near elite flexibility. He's perfect for a scheme that emphasizes short area quickness

and the ability to maintain leverage. Siragusa also has enough speed to work in a power scheme. But his athletic traits in a ZBS can make him a star.

Scheme Fit: Any

Projection: Long-term Starter to Pro Bowler

No	Pro Bowl Flexibility Score: 45.19 or Higher	100% of Multiple Pro Bowl OGs since the 1996 NFL Draft Class had a flexibility score of 45.19 or higher
Yes	Starter Flexibility Score: 12.07 or Higher	100% of 64 start or higher OGs since the 1996 NFL Draft Class had at least a speed score of 12.07 or higher
No	All-Pro/Pro Bowl Athleticism Score: 76.26 or Higher	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 76.26 or higher
Yes	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Above average explosiveness and speed. Sean Harlow has a decent profile as a long-term starting guard. However, his lack of flexibility can be a liability against pass rushers who can

bend. If he goes to a run heavy offense, you can mitigate some of these concerns. But I'd value as a backup to potential long-term starter only due to his flexibility concerns.

Scheme Fit: Zone

Projection: Backup to Potential Starter

Yes	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OGs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Taylor Moton as a guard can be whatever he damn well please. Elite explosiveness, above average speed and near elite flexibility. Moton has all the athletic qualities to be an instant star inside. He's a better overall mismatch inside versus outside due to his lack of height. But I will do

another profile at tackle to further explain my reasoning for why the best spot to maximize his skill set is inside.

No	All-Pro/Pro Bowl Athleticism Score: 78.42 or Higher	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 78.42 or higher
Yes	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Adam Bisnowaty has the profile of a potential long-term starting tackle. But with below average athleticism traits across the board, he'll never be a high-quality tackle. A better fit would also be found inside. Because Bisnowaty must be advanced with his technique and reactions skills to not be a consistent liability outside. Value as a backup to potential long-term starter in hopefully a quick passing attack offense.

Yes	Starter Flexibility Score: 7.55 or Higher	100% of 64 start or higher OTs since the 1996 NFL Draft Class had at least a speed score of 7.55 or higher
No	All-Pro/Pro Bowl Athleticism Score: 78.42 or Higher	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 78.42 or higher
Yes	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Antonio Garcia has above average explosiveness for his size. But his speed and especially flexibility for his size are not getting it done. He does not have Pro Bowl or All-Pro athletic upside. A better fit would be inside where his lack of speed and especially flexibility will be less of a liability. However, for now, he's like a Luke Joeckel with significantly below average flexibility.

DNP	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Cam Robinson has a decent tackle profile, but his skill set is less of a liability at guard. Above average explosiveness, speed, and flexibility. Robinson has a well-rounded athletic skill set. But his combination of not having elite explosiveness and flexibility make him susceptible to Edge Rushers who can out bend, or explode better than him. Most of the issues Robinson has on film.

I'd say put him in the best spot to maximize his skill set inside. That way you don't risk losing three to four years of development at a position where he doesn't fit perfectly. Either way Robinson should be considered whether guard or tackle a top asset in this class. It's just a matter of where you want to develop him long-term.

No	All-Pro/Pro Bowl Athleticism Score: 78.42 or Higher	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 78.42 or higher
No	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: It's surprising to see a lineman from USC to test as poorly as he did. But that's exactly what happened to Chad Wheeler. He failed both the explosiveness and speed thresholds for a long-term starter. Along with only barely hitting the long-term starter flexibility threshold. Value Wheeler as a reserve to backup tackle only.

DNP	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Conor McDermott has a starting tackle profile. But he doesn't have the right combination of athletic traits to ever be elite. And he will always be a liability against more explosive Edge Rushers. The solid trait he has in above average flexibility though could make him a solid right tackle in a power scheme. This coupled with his age is why I project Conor McDermott as a backup to long-term starter.

Scheme Fit: Power

Yes	Starter Flexibility Score: 7.55 or Higher	100% of 64 start or higher OTs since the 1996 NFL Draft Class had at least a speed score of 7.55 or higher
No	All-Pro/Pro Bowl Athleticism Score: 78.42 or Higher	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 78.42 or higher
DNP	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Dan Skipper failed one athletic threshold in speed. And his other athletic qualities were significantly below average. He has all the physical measures for the position. But his athleticism is just so poor across the board it's hard to see a scenario where he becomes a starter long-term. Value as a reserve to backup tackle only.

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: David Sharpe has above average speed and flexibility to be a potential long-term starter at tackle. But significantly below average explosiveness will make him a liability against most Edge Rushers. If he moves inside, he could be a decent option there with his speed and flexibility. However, for now I'd value as a backup to starter in the right scheme.

Scheme Fit: Power

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Dion Dawkins has a strong profile as a potential long-term starter at tackle. But his lack of height caps his upside. Because all high-quality tackles at his height range had top 10 percentile athleticism traits across the board. While Dawkins only has one top ten percentile athleticism trait in flexibility. Value as a very strong candidate to move inside to maximize his skill set, but he can become a serviceable tackle in a pinch.

Yes	All-Pro/Pro Bowl Athleticism Score: 78.42 or Higher	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 78.42 or higher
DNP	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Garrett Bolles has above average athleticism across the board. With elite flexibility, as well. However, his age and height make his overall upside very low going forward. All multiple All-Pro and Pro Bowl tackles in Bolles' height range had significantly higher explosiveness scores. Thus, I'd project as backup to long-term starter at tackle and guard only.

No	Starter Flexibility Score: 7.55 or Higher	100% of 64 start or higher OTs since the 1996 NFL Draft Class had at least a speed score of 7.55 or higher
No	All-Pro/Pro Bowl Athleticism Score: 78.42 or Higher	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 78.42 or higher
No	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jerry Ugokwe failed multiple data thresholds from speed, flexibility, and bench. With below average explosiveness to cap his profile off. He has the size and length some coaches drool over. But his athleticism for his size is not high enough to survive in the NFL. Thus, I'd project as a reserve to backup only.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: John Flynn has an impressive profile as long-term starting offensive tackle. Above average athleticism across the board with elite flexibility for his size. He has the qualities to be a Pro Bowl tackle. I'd still value him a backup to long-term starter due to his level of competition. But he has Pro Bowl athletic upside.

No	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Julie'n Davenport has the profile of a potential long-term starting tackle. But he has some glaring flaws in athleticism. Significantly below average speed. And 0 elite or near elite athleticism traits. Davenport could work as a ZBS tackle in an up-tempo offense.

However, he's just an odd athlete for tackle. And at 6-7, he'd be an even odder fit as a guard. Value as backup to potential long-term starter in a ZBS only.

Yes	Pro Bowl Flexibility Score: 45.30 or Higher	100% of Multiple Pro Bowl OTs since the 1996 NFL Draft Class had a flexibility score of 45.30 or higher
Yes	Starter Flexibility Score: 7.55 or Higher	100% of 64 start or higher OTs since the 1996 NFL Draft Class had at least a speed score of 7.55 or higher
Yes	All-Pro/Pro Bowl Athleticism Score: 78.42 or Higher	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 78.42 or higher
DNP	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jylan Ware has an impressive athletic profile for offensive tackle. Above average explosiveness, flexibility, and elite speed. He is essentially a more athletic version of Cam Robinson as an athlete. There are some unknowns with his arm length and bench press. However, Ware should be a highly sought after offensive tackle regardless due to his athletic prowess.

Scheme Fit: Power

Projection: Backup to Potential Pro Bowler

Unknown	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Roderick Johnson has an uneven data profile. He has near elite speed and great measurables. However, his below average explosiveness and flexibility are not a great combination for success. He's a better fit inside as an athlete, but at 6-7, his height cancels that out. Thus, I'd project Johnson as a backup to potential long-term starter only with a high chance to disappoint with his profile.

Scheme Fit: Power

Projection: Reserve to Potential Starter

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Sam Tevi's profile is more indicative of a guard than a tackle. He has above average speed and explosiveness for his size. But with 0 elite athleticism traits with less than ideal height caps his upside. Tevi could develop into a long-term starter at tackle. However, I'd value as a backup to potential long-term starter and would consider moving him to guard right away.

		1996 NFL Draft Class had an explosive lower body strength score of 58.46 or higher
Yes	Pro Bowl Explosive Lower Body Strength Score: 35.75 or Higher	100% of Multiple Pro Bowl OTs since the 1996 NFL Draft Class had an explosive lower body strength score of 35.75 or higher
Yes	Starter Explosive Lower Body Strength Score: 3.24 or Higher	100% of 64 start or higher OTs since the 1996 NFL Draft Class had at least an explosive lower body strength score of 3.24 or higher
No	All-Pro Speed Score: 85.87 or Higher	100% of Multiple All-Pro OTs since the 1996 NFL Draft Class had a speed score of 85.87 or higher
Yes	Pro Bowl Speed Score: 47.54 or Higher	100% of Multiple Pro Bowl OTs since the 1996 NFL Draft Class had a speed score of 47.54 or higher
Yes	Starter Speed Score: 10.31 or Higher	100% of 64 start or higher OTs since the 1996 NFL Draft Class had at least a speed score of 10.31 or higher
Yes	All-Pro Flexibility Score: 51.11 or Higher	100% of Multiple All-Pro OTs since the 1996 NFL Draft Class had a flexibility score of 51.11 or higher
Yes	Pro Bowl Flexibility Score: 45.30 or Higher	100% of Multiple Pro Bowl OTs since the 1996 NFL Draft Class had a flexibility score of 45.30 or higher
Yes	Starter Flexibility Score: 7.55 or Higher	100% of 64 start or higher OTs since the 1996 NFL Draft Class had at least a speed score of 7.55 or higher
Yes	All-Pro/Pro Bowl Athleticism Score: 78.42 or Higher	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 78.42 or higher
Yes	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Taylor Moton can be a long-term starting tackle. But with less than ideal height, his upside is in question. All multiple All-Pro tackles in Moton's range has top 10 percentile athleticism across the board. Moton only has one elite athleticism trait. I'd value as a long-term starting tackle, but I'd recommend moving to guard to maximize his profile's potential.

It's essentially asking the question would you rather have a long-term starting tackle, or a Pro Bowl guard? That's for teams to decide. But Moton is certainly one of the safer line prospects in this draft class.

No	Pro Bowl Speed Score: 47.54 or Higher	100% of Multiple Pro Bowl OTs since the 1996 NFL Draft Class had a speed score of 47.54 or higher
Yes	Starter Speed Score: 10.31 or Higher	100% of 64 start or higher OTs since the 1996 NFL Draft Class had at least a speed score of 10.31 or higher
No	All-Pro Flexibility Score: 51.11 or Higher	100% of Multiple All-Pro OTs since the 1996 NFL Draft Class had a flexibility score of 51.11 or higher
Yes	Pro Bowl Flexibility Score: 45.30 or Higher	100% of Multiple Pro Bowl OTs since the 1996 NFL Draft Class had a flexibility score of 45.30 or higher
Yes	Starter Flexibility Score: 7.55 or Higher	100% of 64 start or higher OTs since the 1996 NFL Draft Class had at least a speed score of 7.55 or higher
No	All-Pro/Pro Bowl Athleticism Score: 78.42 or Higher	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 78.42 or higher
Yes	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Will Holden is for comparison a less athletic version of Julie'n Davenport. Above average explosiveness that can work in a ZBS scheme. But in Holden's case he has below average flexibility and significantly below average speed. Moving a 6-7 tackle to guard is never ideal. However, if he can't move inside, I'd value only as a reserve to backup long-term.

Yes	All-Pro Age Threshold 23.5	100% of Multiple All-Pro OTs were at most 23.5 on draft day since the 1996 NFL Draft Class
Yes	All-Pro OT Height: 6-6 or Taller	80% of Multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft Class were 6-6 or Taller
Yes	Long-term starter OT Height: 6-4 or Taller	100% of 64 Start or more OTs since the 1996 NFL Draft Class were 6-4 or Taller
Yes	All-Pro OT Arm Length: 32 7/8-Inches	100% of Multiple All-Pro OTs since the 1996 NFL Draft Class had 32 7/8-Inch Arm Length
Yes	Long-term starter Arm Length: 31.5-Inches	100% of 64 Start or more OTs since the 1996 NFL Draft Class had 31.5 Inch Arm Length or longer
No	All-Pro Explosive Lower Body Strength: 58.46 or Higher	100% of Multiple All-Pro OTs since the

		1996 NFL Draft Class had an explosive lower body strength score of 58.46 or higher
No	Pro Bowl Explosive Lower Body Strength Score: 35.75 or Higher	100% of Multiple Pro Bowl OTs since the 1996 NFL Draft Class had an explosive lower body strength score of 35.75 or higher
Yes	Starter Explosive Lower Body Strength Score: 3.24 or Higher	100% of 64 start or higher OTs since the 1996 NFL Draft Class had at least an explosive lower body strength score of 3.24 or higher
No	All-Pro Speed Score: 85.87 or Higher	100% of Multiple All-Pro OTs since the 1996 NFL Draft Class had a speed score of 85.87 or higher
No	Pro Bowl Speed Score: 47.54 or Higher	100% of Multiple Pro Bowl OTs since the 1996 NFL Draft Class had a speed score of 47.54 or higher
Yes	Starter Speed Score: 10.31 or Higher	100% of 64 start or higher OTs since the 1996 NFL Draft Class had at least a speed score of 10.31 or higher
No	All-Pro Flexibility Score: 51.11 or Higher	100% of Multiple All-Pro OTs since the 1996 NFL Draft Class had a flexibility score of 51.11 or higher
No	Pro Bowl Flexibility Score: 45.30 or Higher	100% of Multiple Pro Bowl OTs since the 1996 NFL Draft Class had a flexibility score of 45.30 or higher
Yes	Starter Flexibility Score: 7.55 or Higher	100% of 64 start or higher OTs since the 1996 NFL Draft Class had at least a speed score of 7.55 or higher
No	All-Pro/Pro Bowl Athleticism Score: 78.42 or Higher	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least one athleticism score (explosive lower body, speed, flexibility) of 78.42 or higher
Yes	All-Pro and Pro Bowl Bench: 21 or more	100% of multiple All-Pro and Pro Bowl OTs since the 1996 NFL Draft class had at least 21 reps or more on the bench press

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Zach Banner has a very slim chance of becoming a long-term starter. Significantly below average in explosiveness, speed and flexibility for his size. And putting a 6-8 tackle at guard is a non-starter for most teams. Unless Zach can make like Bruce Banner and hulk out. I can only project a reserve to backup level tackle long-term.

Scheme: Zone

Projection: Reserve to Backup

Edge

Defensive ends and rush linebackers are the positions I group into the term Edge. One, due to the nature of the position meaning you are lined up on or near the edge of the offensive line. But two, based my data work spanning over two decades, the production that has ramifications on future quality and success for both positions are identical. Whether it be 4-3 defensive ends in college, or 3-4 outside linebackers. Solo tackle, sack and tackle for loss market share are the primary indicators for future success.

For those new to these terms, market share on the defensive side of the ball is the taking of a defensive player's individual statistic that is then divided by the team's total. For example, if a defensive end had ten sacks on a team that had forty total sacks. Then that defensive end had twenty-five percent sack market share. A simple concept, but it gives a clear perspective on how much impact an individual defensive player had on their team compared to their peers. In addition to the stark reality you will find when almost all quality and quantity starters had above average production in each of those defensive statistics.

And while athletic data can give you a sense of who can succeed or fail in the NFL. It doesn't help you identify the qualities that made the players we consider the greatest pass rushers of all-time great. Nor does it warn you of the potential risks in taking a great athlete who underperformed his ability in college. Defensive market share combined with athleticism data is more predictive to finding quality outcomes than any other method out there. As well as exposing the potential risks and flaws that may keep some high-end athletes from living up to their potential.

Thus, I highly recommend you pay attention to these risks to properly value prospects now and the future. But it's not just production that you should concern yourself with as much as height and arm length as well. The same correlations favoring height on the offensive line show up on the other side of the football. Where taller Edge prospects who hit all the other boxes tend to have more consistently dominate careers than their shorter peers. And there are also clear points of diminishing returns with Edge prospects who don't hit arm length thresholds too.

So, look at the profiles below. Pay attention to the thresholds. And I hope you start to think about the variables that truly lead to success at the Edge position. Because while athleticism based formulas will have their place at every position. It's not wise to ignore the other variables that have a huge impact on future performance than pure potential.

Yes	All-Pro and Pro Bowl Arm Length: 32'' or Longer	100% of multiple All-Pro and Pro Bowl Edge Rushers since the 1996 NFL Draft class had 32'' or longer Arm Length
Yes	All-Pro and Pro Bowl Hand Size: 8 7/8'' or Bigger	100% of Multiple All-Pro and Pro Bowl Edge Rushers since the 1996 NFL Draft

		class had 8 7/8'' or Bigger
No	All-Pro Explosive Lower Body Strength Score: 57.50 or higher	100% of Multiple All-Pro Edge Rushers since the 1998 NFL Draft Class had an explosive lower body strength score of 57.50 or higher
No	Pro Bowl Explosive Lower Body Strength Score: 30.89 or higher	100% of Multiple Pro Bowl Edge Rushers since the 1998 NFL Draft Class had an explosive lower body strength score of 30.89 or higher
Yes	Starter Explosive Lower Body Strength Score: 7.89 or higher	100% of 64 start or more Edge Rushers since the 1998 NFL Draft Class had an explosive lower body strength score of 7.89 or higher
No	All-Pro Speed Score: 71.18 or higher	100% of Multiple All-Pro Edge Rushers since the 1998 NFL Draft Class had a speed score of 71.18 or higher
No	Pro Bowl Speed Score: 57.58 or higher	100% of Multiple Pro Bowl Edge Rushers since the 1998 NFL Draft Class had a speed score of 57.58 or higher
Yes	Starter Speed Score: 17.84 or higher	100% of 64 Start or more Edge Rushers since the 1998 NFL Draft Class had a speed score of 17.84 or higher
No	All-Pro Flexibility Score: 76.70	100% of Multiple All-Pro Edge Rushers since the 1998 NFL Draft Class had a flexibility score of 76.70 or higher
No	Pro Bowl Flexibility Score: 69.87 or higher	91% Multiple Pro Bowl Edge Rushers since the 1998 NFL Draft Class had a flexibility score of 69.87 or higher
Yes	Starter Flexibility Score: 6.07 or higher	100% of 64 Start or more Edge Rushers since the 1998 NFL Draft Class had a flexibility score of 6.07 or higher
No	All-Pro SS: 4.34 or Lower	100% of multiple All-Pro Edge Rushers since the 1998 NFL Draft Class had a Short Shuttle of 4.34 or >
Yes	Pro Bowl SS: 4.47 or Lower	100% of multiple Pro Bowl Edge Rushers since the 1998 NFL Draft Class had a Short Shuttle of 4.47 or >
No	All-Pro 3-Cone: 7.11 or Lower	100% of multiple All-Pro Edge Rushers since 1998 NFL Draft Class had a 3-Cone of 7.11 or >
Yes	Pro Bowl 3-Cone: 7.37 or Lower	100% of multiple Pro Bowl Edge Rushers since the 1998 NFL Draft Class had a 3-Cone of 7.37 or >
Yes	Starter Bench: 13 or More	100% of 64 Start or more Edge Rushers since 1998 had at least 13 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Al Quadin-Muhammad has solid size and length. But his overall production profile is average. And his athleticism was below average in each metric. Muhammad could develop into a rotational pass rusher. I'd value as a reserve to backup.

Scheme Fit: 3-4 OLB

Projection: Reserve to Backup

Yes	Starter Bench: 13 or More	100% of 64 Start or more Edge Rushers since 1998 had at least 13 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Carl Lawson has a very uneven profile. Above average age and athleticism for his size. But very low solo tackle market share. In addition to a 7.46 3-Cone that takes him out of multiple Pro Bowl range of prospects. Lawson will likely have a very good career as a long-term starter/rotational pass rusher.

However, his history of injuries and his 3-Cone score are likely indicative of a pattern here.

Scheme Fit: 3-4 OLB

Projection: Backup to Long-term Starter

Yes	Starter Bench: 13 or More	100% of 64 Start or more Edge Rushers since 1998 had at least 13 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Carroll Phillips has significantly below average age and questionable athleticism traits. He had Pro Bowl potential production. With above average speed and flexibility traits. But ultimately, Phillips will only become a backup to spot starter in the NFL. View as a rotational pass rusher and you won't lose money.

Scheme Fit: 4-3 Sam

Projection: Backup to Spot Starter

No	Pro Bowl 3-Cone: 7.37 or Lower	100% of multiple Pro Bowl Edge Rushers since the 1998 NFL Draft Class had a 3-Cone of 7.37 or >

Yes	Starter Bench: 13 or More	100% of multiple 64 Start or more Edge Rushers since 1998 had at least 13 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Charles Harris has solid age and production indicating a potential quality edge rusher. However, his production is cashing checks his athleticism can't pay. Below average explosiveness, speed, and flexibility. In addition to not meeting the 3-Cone threshold in its raw form. Thus, I'd value as purely a backup to potential long-term starter only.

Scheme Fit: 3-4 OLB

Projection: Backup to Potential Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Daeshon Hall is all athlete without the production to match. He has Pro Bowl athletic upside. But Hall just doesn't add up market share wise. And I don't believe it helps his case having Myles Garrett there. Teams were not scheming to stop Hall.

And he still didn't put up the production numbers necessary for Pro Bowl projection. Thus, I'd project Hall as a long-term starter to rotational pass rusher only. He has the athletic upside to become a Pro Bowler. But too many other variables don't add up.

Scheme Fit: 4-3 Defensive End

Projection: Backup to Long-term Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Darius English has a solid starter profile. Above average production across the board. In addition to above average explosiveness. He misses the mark in terms of flexibility and speed for quality outcomes. However, there is enough here to see a role as a starter. Thus, I'd project as a backup to long-term starter only.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Dawuane Smoot has the athleticism traits of a Pro Bowl pass rusher. But his solo tackle market share doesn't match up. Along with a few other minor flaws that cap his upside. Thus, I'd project as a starter to rotational pass rusher. He has athletic upside, but I side with prospects who check all the boxes.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Deatrich Wise Jr. has a decent long-term starter profile. Above average explosiveness and flexibility for his size. He will have issues due to below average speed. But he could be a very productive complimentary rusher for a long time. Thus, I'd project Wise as a long-term starter.

Scheme Fit: 4-3 Defensive End

Projection: Backup to Long-term Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Demarcus Walker has a decent starter profile. Elite production to go with above average athletic qualities. He lacks the flexibility to ever become a high quality defensive linemen. However, he has strong enough indicators to say he can become a long-term starter. But his agility drills are poor enough to consider as a higher risk than most.

Scheme Fit: 4-3 Defensive End

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Derek Barnett had a disappointing day at the Combine. But he's very close to Terrell Suggs as a prospect. Similar age, production, and athleticism profile. Barnett missing the mark in everything Suggs had. However, there is a very good chance Barnett can be Suggs light at the NFL level.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Derek Rivers is an old, but impressive Edge athlete. He has above average explosiveness, speed, and flexibility for his size. However, his production from FCS based on eyeballing past successes from his level of competition is suspect. I'm still collecting more data to have a better model for FCS/DII/DIII. But the main concern with Rivers is how a guy this athletic didn't post a single top 10 percentile market share score at his level of competition.

I'd project Rivers as a backup to long-term starter based on his athleticism traits. However, I'd be a bit worried that he wasn't a dominant player at his level of competition compared to past success stories.

No	Pro Bowl 3-Cone: 7.37 or Lower	100% of multiple Pro Bowl Edge Rushers since the 1998 NFL Draft Class had a 3-Cone of 7.37 or >
DNP	Starter Bench: 13 or More	100% of 64 Start or more Edge Rushers since 1998 had at least 13 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Devonte Fields has a solid production profile. But his age and overall athleticism is not ideal. Below average athletic traits across the board. There is a chance that Fields could be a long-term starter based on his production profile. However, I'd project a reserve to backup player in the future.

Scheme Fit: 4-3 Sam

Projection: Reserve to Backup

Yes	Starter Bench: 13 or More	100% of 64 Start or more Edge Rushers since 1998 had at least 13 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Dylan Donahue has flexibility athletic traits that are intriguing. And Donahue's production for his level of competition looks fine on the surface. However, his age, lack of length and below average explosiveness/speed don't profile well to a starter. I'd project a reserve to backup caliber rush linebacker. But there is not much upside here.

Scheme Fit: 4-3 Sam

Projection: Reserve to Backup

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Ejuan Price has the production of a Pro Bowl caliber prospect. But there is just too much off with his athleticism to project that. Below average in explosiveness and speed. Price could develop into a long-term starter in the right scheme. However, I'd value only as a backup to potential long-term starter due to his athleticism shortcomings and age.

Scheme Fit: 4-3 Sam

Projection: Backup to Potential Starter

Yes	Starter Bench: 13 or More	100% of 64 Start or more Edge Rushers since 1998 had at least 13 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Garrett Sickels does not have a strong profile. Positives exist in flexibility for his size. However, his production and significantly below average explosiveness are a non-starter. Sickels is destined to only become a reserve to backup caliber player. There is not a lot of upside here.

Scheme Fit: 4-3 Defensive End

Projection: Reserve to Backup

Yes	Starter Bench: 13 or More	100% of 64 Start or more Edge Rushers since 1998 had at least 13 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Haason Reddick has an impressive profile as a rush linebacker. Above average production and athleticism. The only area to nitpick is his sack market share was a couple points off from Pro Bowl level. However, everything in his profile points toward a multiple Pro Bowl 4-3 Sam linebacker. That's what I would project, but I will add another profile on his chances at inside linebacker soon.

Scheme Fit: 4-3 Sam

Projection: Long-term Starter to Pro Bowler

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Hunter Dimick has a decent starter profile. Above average production and some above average athleticism traits. Dimick doesn't hit the age or explosive traits of a high-quality NFL pass rusher. However, he has enough positives in his production and athleticism to project as a potential long-term starter.

Scheme Fit: 3-4 OLB

		Class had a 3-Cone of 7.37 or >
Yes	Starter Bench: 13 or More	100% of 64 Start or more Edge Rushers since 1998 had at least 13 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Ifeadi Odenigbo has the profile of a starter to potential Pro Bowl caliber player. His solo tackle market share was very low as a rotational player at Northwestern. But his sack and TFL market share was impressive for a part-time player in that defense. Coupled with his above average athleticism traits. I'd project Odenigbo as a future starter to productive rotational pass rusher in the right scheme.

Scheme Fit: 3-4 OLB

Projection: Backup to Potential Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Isaac Rochell has an uneven data profile. He's young with above average athleticism and production traits. But he also has significantly low sack market share. Rochell has the athleticism and production to be a long-term starter for a team. However, he will likely never become a high-quality starter.

Scheme Fit: 4-3 Defensive End

Yes	Starter Bench: 13 or More	100% of 64 Start or more Edge Rushers since 1998 had at least 13 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jeremiah Ledbetter has a Mario Edwards like profile, but not in a good way. He has average to below average production indicators. Ledbetter has the athleticism to be a long-term starter due to his above average explosiveness and speed. However, his flexibility and production point toward only reserve to backup potential.

Scheme Fit: 4-3 Defensive End

Projection: Reserve to Backup

No	Starter Bench: 13 or More	100% of 64 Start or more Edge Rushers since 1998 had at least 13 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jimmie Gilbert has an uneven data profile. He elite production market share and great length. But his below average athleticism and not hitting the bare minimum bench rep threshold hurts him. I'd still project as a potential starter, but it's best to value initially as a reserve to backup only. He can be a rotational pass rusher at the very least.

Scheme Fit: 4-3 Sam

Projection: Backup to Potential Starter

Metric Analysis: Every indicator in Jordan Willis' profile point toward multiple All-Pro potential. Except for his solo tackle market share score. And while there is still pushback against Jordan Willis from the "film" crowd. This is an extremely strong profile indicating at the very least a multiple Pro Bowl caliber player. You don't have to like him, some didn't like Vic Beasley either.

However, Willis has the type of athletic ability that will be a mismatch against most NFL offensive lines. His explosiveness alone can beat many NFL tackles off the snap. He may never be a consistently elite edge rusher. But many film evaluators may be over thinking Mr. Willis. Or at the very least, they over think the Edge position a lot more than they realize.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Josh Carraway does not have a great data profile. Below average production and athleticism. Carraway has some potential to be a long-term starter based on bare minimum traits. However, I'd project as a reserve to backup only due to his athleticism combination and poor production.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Ken Ekanem has some positives in his profile. But average production and below average athleticism limit his upside. There's a decent chance he could become a long-term starter. However, there are no indicator of quality edge play. Thus, I'd project as a reserve to backup only with some starter upside.

Yes	Starter Bench: 13 or More	100% of 64 Start or more Edge Rushers since 1998 had at least 13 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Myles Garrett has a nearly perfect data profile. Elite explosiveness and speed. In addition to hitting All-Pro and Pro Bowl production thresholds. Garrett is not necessarily a generational talent due to a few numbers being off. However, despite that, it's easy to see how he could create a new standard for the All-Pro sack threshold due to the overwhelming number of positive indicators in his profile.

Scheme Fit: 4-3 Defensive End

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Nobel Nwachukwu has above average athleticism traits. However, his overall production is not indicative of a high-quality starter. Nwachukwu has the potential to develop into a long-term starter based on his athleticism. But I'd project him as a reserve to backup only due to his production traits.

Yes	Starter Bench: 13 or More	100% of 64 Start or more Edge Rushers since 1998 had at least 13 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Pita Taumoepenu has some very intriguing athleticism traits. But his lack of quality production and not meeting the minimum starter score for explosiveness casts doubt on his projection. It's easy to see he has the speed and flexibility to be an asset on special teams. Thus, I'd project Pita Taumoepenu as a backup to potential long-term starter.

Yes	Pro Bowl Speed Score: 57.58 or higher	100% of Multiple Pro Bowl Edge Rushers since the 1998 NFL Draft Class had a speed score of 57.58 or higher
Yes	Starter Speed Score: 17.84 or higher	100% of 64 Start or more Edge Rushers since the 1998 NFL Draft Class had a speed score of 17.84 or higher
No	All-Pro Flexibility Score: 76.70	100% of Multiple All-Pro Edge Rushers since the 1998 NFL Draft Class had a flexibility score of 76.70 or higher
No	Pro Bowl Flexibility Score: 69.87 or higher	91% Multiple Pro Bowl Edge Rushers since the 1998 NFL Draft Class had a flexibility score of 69.87 or higher
Yes	Starter Flexibility Score: 6.07 or higher	100% of 64 Start or more Edge Rushers since the 1998 NFL Draft Class had a flexibility score of 6.07 or higher
DNP	All-Pro SS: 4.34 or Lower	100% of multiple All-Pro Edge Rushers since the 1998 NFL Draft Class had a Short Shuttle of 4.34 or >
DNP	Pro Bowl SS: 4.47 or Lower	100% of multiple Pro Bowl Edge Rushers since the 1998 NFL Draft Class had a Short Shuttle of 4.47 or >
No	All-Pro 3-Cone: 7.11 or Lower	100% of multiple All-Pro Edge Rushers since 1998 NFL Draft Class had a 3-Cone of 7.11 or >
No	Pro Bowl 3-Cone: 7.37 or Lower	100% of multiple Pro Bowl Edge Rushers since the 1998 NFL Draft Class had a 3-Cone of 7.37 or >

DNP	Starter Bench: 13 or More	100% of 64 Start or more Edge Rushers since 1998 had at least 13 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Ryan Anderson has an uneven data profile. He has some substantial production and physical measures. In addition to above average speed. However, his significantly below average explosiveness and flexibility hurt his profile. I'd value as a reserve to backup/rotational pass rusher only.

Scheme Fit: 3-4 OLB

Projection: Reserve to Potential Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Soloman Thomas has a very strong profile for NFL success. Elite athleticism for his size with solid physical measures. The only area of concern is Thomas' low sack market share. But most of that is due to playing inside versus outside. His production graded All-Pro when I ran his data through interior defensive linemen.

And there will be some comparing him to Chris Long due to the similarities of usage. However, Thomas is entering two years earlier than Long. And Thomas had significantly higher production overall than Long. You need to take a step back and realize that this is the second most athletic Edge in this class. Where the sky is the only limit to how impactful he can be inside or out.

Scheme Fit: Any

Projection: Long-term Starter to Pro Bowler

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: T.J. Watt has a very strong data profile as a multiple Pro Bowl Edge. Above average production and athleticism across the board. There are aspects to nitpick like his speed score and sack score being a bit lower than elite. But all the components are here on paper for another star with the last name of Watt roaming around the NFL. Or at the very least, an underappreciated long-term starter.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Takkarist McKinley has very strong long-term starting Edge profile. Above average athleticism and one of the highest overall production scores I have on record. The problems exist in his flexibility. Where there have been 0 All-Pro or Pro Bowl caliber prospects with his agility scores. But McKinley has enough positives in his profile to project as a long-term starter.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Tanoh Kpassagnon has starter level athleticism. But his production at the FCS level is a bit suspect. I'm still working on a more table model for FCS/DII/DIII production. However, eye balling the production compared to all the other successful outcomes at that level like Jared Allen or even Junior Galette for example is poor. Thus, I'd project as a backup to potential long-term starter only.

Scheme Fit: 4-3 Defensive End

Projection: Backup to Potential Starter

Yes	Starter Bench: 13 or More	100% of 64 Start or more Edge Rushers since 1998 had at least 13 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Grade: Tarell Basham has an uneven data profile. All-Pro level athleticism across the board. However, his production, especially for his level of competition is concerning. It's above average, but for MAC competition, his MSA rating is not meeting the starter level threshold. Thus, I'd project Basham as a backup to potential long-term starter.

Yes	Starter Bench: 13 or More	100% of 64 Start or more Edge Rushers since 1998 had at least 13 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Tashawn Bower has a solid backup to potential starter profile. He has a good overall physical dimension, but his athleticism across the board is below average. Bower was a part-time Edge at LSU and it shows up in his production scores. This will likely continue in the NFL. Thus, I'd project Bower as a reserve to backup only.

Yes	Starter Bench: 13 or More	100% of 64 Start or more Edge Rushers since 1998 had at least 13 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Tim Williams has an uneven data profile. He's an older prospect with below average production except for TFL market share. Part-time player excuses aside, it was very suspect production. And to finish it off, he had below average flexibility for size. Which negate much of his positive explosiveness and speed.

But, there is some hope as he has an eerily similar combination of athleticism traits to Paul Kruger. A player whose career arc at the NFL level would not be a bad result for Tim Williams. I'd project Williams as purely a backup to rotational Edge. However, he could have a moment or two where his fans will say I told you so.

Yes	Pro Bowl 3-Cone: 7.37 or Lower	100% of multiple Pro Bowl Edge Rushers since the 1998 NFL Draft Class had a 3-Cone of 7.37 or >

Yes	Starter Bench: 13 or More	100% of 64 Start or more Edge Rushers since 1998 had at least 13 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Trey Hendrickson has All-Pro athleticism traits. But a few question marks exist in his production. He did not hit Pro Bowl or All-Pro solo tackle market share production. Thus, I'd project a long-term starter with potential Pro Bowl athletic upside.

Scheme Fit: 3-4 OLB

Projection: Long-term Starter to Pro Bowler

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Tyus Bowser has a Pro Bowl level data profile. Above average athleticism across the board. To go with above average production and a decent MSA Rating for his level of competition. He missed the All-Pro sack threshold as something to nitpick. However, I'd still project Bowser as a long-term starter with Pro Bowl upside.

Yes	Starter Bench: 13 or More	100% of 64 Start or more Edge Rushers since 1998 had at least 13 reps on the bench

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Vince Biegel's injury history is scary. However, he does have a decent data profile other than his injury history. Above average speed and flexibility. To go with Pro Bowl level production. His age drops his upside, but I'd project Biegel as a long-term starter based on his production and athletic profile.

Scheme Fit: 3-4 OLB

Projection: Backup to Potential Starter

DT

One of the biggest myths in the NFL draft scouting community, is that due to the variety of places a defensive tackle could line up means production doesn't matter. It's an excuse scouts give to prospects who play in a scheme where they are taking on multiple blockers such as a nose tackle. And while there is some truth that where a prospect lines up and their role in a scheme can affect certain types of production like sacks or tackles for loss. The same defensive market share correlations favoring above average production at Edge show up at the defensive tackle position too. Which makes perfect sense, because based on my data work, whether you are a nose tackle, a three-technique or a five-technique, the high impact versions of those types had above average production.

And often prospects that were said to be unproductive such as Dontari Poe, who was championed as an argument against production was above average productive after all. The only significant production issue that affects most nose tackles is less sacks and tackles for loss compared to their peers. But every high-quality nose tackle prospect over the last two decades had very high solo tackle market share. Meaning that despite the scheme a prospect is in, the great ones will find a way to make a significant impact no matter the constraints. There is simply no excuse for any defensive tackle prospect who you believe can be dominant to not be productive.

Furthermore, the last excuse I wanted to get out of the way is the "talent" around a prospect excuse. In other words: he wasn't as productive as he could have been, because he was on a great team with other great prospects who took some of his production. If a prospect can't stick out with talented players around him, then how is he going to stick out in the NFL where the talent gap is even higher. I have not seen a single example of a great NFL player who wasn't productive, or an example of a player whose talent was being held back by how great the talent was around him. Both the unproductive and "talent" constraint arguments are examples of how lazy and unproven rhetoric becomes fact if you keep repeating it.

Which bleeds into my last topic on height and arm length at defensive tackle. There is an awful lot of backlash about how defensive tackle height due to the successes of short prospects like Aaron Donald or Geno Atkins. But the same correlations on the offensive line favoring taller prospects is the same with defensive tackle prospects. While it is true that variables such as athleticism and especially production are more important indicators than size. It is still an important variable to weigh when it comes to overall potential.

The profiles below will show whether these defensive tackle prospects met adequate production thresholds. And it will give you the actual demarcation for height, arm length and hand size measures.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Caleb Brantley has a solid profile as a starting defensive tackle. He has some above average production and athleticism traits. But there are not enough quality indicators in his profile to indicate a player who will ever be a high-quality lineman. Brantley also has more in common with 320-

pound nose tackles production wise than 300 pound 3-tech does. Thus, I'd project as a backup to long-term starter only.

Scheme Fit: 3-Tech

Projection: Backup to Long-term Starter

Yes	Starter Bench: 16 reps or more	100% of 64 start or more DTs since the 1998 NFL Draft Class had at least 16 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Carlos Watkins has impressive athleticism traits. But his age and overall production are not indicative of a quality NFL Starter. So, despite having above average explosiveness and near

elite speed for his size. I'd only project Watkins as a long-term starter to backup caliber player. He just doesn't meet the production thresholds that matter to quality success in the NFL.

Scheme Fit: 3-Tech

Projection: Backup to Long-term Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Charles Walker has a surprisingly solid profile as a potential Pro Bowl level defensive tackle. Above average production across the board. With above average explosiveness and elite speed

for his size. There are some medical red flags with concussion to consider. However, I'd project Walker as a long-term starter to potential Pro Bowl caliber player based on his data profile.

Scheme Fit: 3-Tech

Projection: Long-term Starter to Pro Bowler

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Chris Wormley is the perfect example of the disconnect between physical measures and athleticism vs. production. Despite Wormley being All-Pro as an athlete and physical measures.

There is an extremely low chance of him becoming a starter let alone a blue moon event as a quality starter. He's old and unproductive. And he doesn't even have an above average production metric.

All you will be paying for if you buy Wormley high is Ra'Shede Hageman 2.0, but this time, Wormley is the less productive one.

Scheme Fit: 5-Tech

Projection: Reserve to Potential Starter

Yes	Starter Bench: 16 reps or more	100% of 64 start or more DTs since the 1998 NFL Draft Class had at least 16 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Impressive athleticism with extremely low production. Corey Thomas falls into the category of someone who could become a starter with his athleticism. However, the odds of him finding the right coach and situation for that to happen are very low. He could become a one hit, or

even one game wonder. But I would only value as a reserve to backup player based on his production profile.

Scheme Fit: 3-Tech

Projection: Reserve to Backup

Yes	All-Pro and Pro Bowl Athleticism Score: 80.46 or higher	100% of multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least one athleticism score (explosive lower body strength, speed, flexibility) of 80.46 or higher
Yes	All-Pro and Pro Bowl Bench: 21 reps or more	100% of Multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least 21 reps on the bench press
Yes	Starter Bench: 16 reps or more	100% of 64 start or more DTs since the 1998 NFL Draft Class had at least 16 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: D.J. Jones is a prime example for why great athleticism is necessary in projecting NFL success. But the other pieces of the puzzle in production matter just as much. Jones is an All-Pro level athlete with only long-term starter production traits. He will have a successful NFL career, because of

his impressive explosiveness, speed, and flexibility for his size. However, his lack of elite production from college spells a player who will disappoint if you view him as a Pro Bowl or All-Pro level player going forward.

Scheme Fit: Nose Tackle

Projection: Backup to Long-term Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Dalvin Tomlinson does not have a strong profile as a long-term starter. Below average production and a very low MSA rating that considers his level of competition. Tomlinson has above

average explosiveness and flexibility. Most of the defensive tackles to breakout as starters with his production were top 10 percentile athletes. Thus, I'd project Tomlinson as a reserve to backup only.

Scheme Fit: Nose Tackle

Yes	Starter Flexibility Score: 11.13 or higher	100% of 64 start or more DTs since the 1998 NFL Draft Class had a flexibility score of 11.13 or higher
Yes	All-Pro and Pro Bowl Athleticism Score: 80.46 or higher	100% of multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least one athleticism score (explosive lower body strength, speed, flexibility) of 80.46 or higher
Yes	All-Pro and Pro Bowl Bench: 21 reps or more	100% of Multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least 21 reps on the bench press
Yes	Starter Bench: 16 reps or more	100% of 64 start or more DTs since the 1998 NFL Draft Class had at least 16 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Eddie Vanderdoes has a shaky long-term starter profile. He has above average explosiveness, speed, and flexibility for his size. With above average solo tackle market share. But his overall production is only starter level. Despite impressive athleticism traits, Vanderdoes is not likely to

become a Pro Bowl or even All-Pro caliber defensive tackle. Thus, I'd project as a backup to long-term starter only.

Scheme Fit: 5-Tech

Projection: Backup to Long-term Starter

Yes	Pro Bowl Flexibility Score: 25.74	100% of Multiple Pro Bowl DTs since the 1998 NFL Draft Class had a flexibility score of 25.74 or higher
Yes	Starter Flexibility Score: 11.13 or higher	100% of 64 start or more DTs since the 1998 NFL Draft Class had a flexibility score of 11.13 or higher
Yes	All-Pro and Pro Bowl Athleticism Score: 80.46 or higher	100% of multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least one athleticism score (explosive lower body strength, speed, flexibility) of 80.46 or higher
Yes	All-Pro and Pro Bowl Bench: 21 reps or more	100% of Multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least 21 reps on the bench press
Yes	Starter Bench: 16 reps or more	100% of 64 start or more DTs since the 1998 NFL Draft Class had at least 16 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Eli Ankou has impressive athleticism traits. But what's disappointing is his production across the board. He didn't hit any quality production thresholds. Making his athleticism window

dressing only. I'd value as a reserve to backup only with a slight chance to develop into a long-term starter due to athletic ability.

Scheme Fit: 3-Tech

Projection: Backup to Long-term Starter

Yes	Starter Explosive Lower Body Strength Score: 4.64	100% of 64 start or more DTs since the 1996 NFL Draft Class had an explosive lower body strength score of 4.64 or higher.

Yes	All-Pro Speed Score: 71.41 or higher	100% of All-Pro DTs since the 1998 NFL Draft Class had a speed score of 71.41 or higher
Yes	Pro Bowl Speed Score: 42.03 or higher	100% of Multiple Pro Bowl DTs since the 1998 NFL Draft Class had a speed score of 42.03 or higher
Yes	Starter Speed Score: 11.41 or higher	100% of 64 start or more DTs since the 1998 NFL Draft Class had a speed score of 11.41 or higher
Yes	All-Pro Flexibility Score: 40.83 or higher	100% of Multiple All-Pro DTs since the 1998 NFL Draft Class had a flexibility score of 40.83 or higher
Yes	Pro Bowl Flexibility Score: 25.74	100% of Multiple Pro Bowl DTs since the 1998 NFL Draft Class had a flexibility score of 25.74 or higher
Yes	Starter Flexibility Score: 11.13 or higher	100% of 64 start or more DTs since the 1998 NFL Draft Class had a flexibility score of 11.13 or higher
Yes	All-Pro and Pro Bowl Athleticism Score: 80.46 or higher	100% of multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least one athleticism score (explosive lower body strength, speed, flexibility) of 80.46 or higher
No	All-Pro and Pro Bowl Bench: 21 reps or more	100% of Multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least 21 reps on the bench press
Yes	Starter Bench: 16 reps or more	100% of 64 start or more DTs since the 1998 NFL Draft Class had at least 16 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Elijah Qualls is an impressive athlete with elite explosiveness for his size. But his overall production is highly suspect. Good sack, but poor solo tackle and TFL market share. Qualls

could become a long-term starter based on his athleticism, but his production caps his upside. Thus, I'd project as backup to long-term starter only at the next level.

Scheme Fit: 3-Tech

Projection: Backup to Long-term Starter

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Glen Antoine has impressive athleticism traits. With good size, as well. However, his production is not where it needs to be. Especially for someone who did not play non-Power five

competition that often. I'd value as a reserve to backup only with some athletic upside to develop into a starter.

Scheme Fit: 3-Tech

Projection: Reserve to Backup

2017 NFL Draft Profiles

Grover Stewart

Defensive Tackle

Team	Albany State (GA)
Age (On Draft Day)	23.53
Height	6-4
Weight	347
Arm Length	34

Yes	All-Pro Flexibility Score: 40.83 or higher	100% of Multiple All-Pro DTs since the 1998 NFL Draft Class had a flexibility score of 40.83 or higher
Yes	Pro Bowl Flexibility Score: 25.74	100% of Multiple Pro Bowl DTs since the 1998 NFL Draft Class had a flexibility score of 25.74 or higher
Yes	Starter Flexibility Score: 11.13 or higher	100% of 64 start or more DTs since the 1998 NFL Draft Class had a flexibility score of 11.13 or higher
Yes	All-Pro and Pro Bowl Athleticism Score: 80.46 or higher	100% of multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least one athleticism score (explosive lower body strength, speed, flexibility) of 80.46 or higher
Yes	All-Pro and Pro Bowl Bench: 21 reps or more	100% of Multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least 21 reps on the bench press
Yes	Starter Bench: 16 reps or more	100% of 64 start or more DTs since the 1998 NFL Draft Class had at least 16 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Grover Stewart has impressive size and athleticism traits. With elite speed and flexibility for his size. Stewart has issues related to age, hand size and production from the FCS.

However, there are a lot of positive here. I would project as a backup to long-term starter based on his athleticism.

Scheme Fit: Nose Tackle

Projection: Backup to Long-term Starter

Yes	Starter Flexibility Score: 11.13 or higher	100% of 64 start or more DTs since the 1998 NFL Draft Class had a flexibility score of 11.13 or higher
No	All-Pro and Pro Bowl Athleticism Score: 80.46 or higher	100% of multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least one athleticism score (explosive lower body strength, speed, flexibility) of 80.46 or higher
Yes	All-Pro and Pro Bowl Bench: 21 reps or more	100% of Multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least 21 reps on the bench press
Yes	Starter Bench: 16 reps or more	100% of 64 start or more DTs since the 1998 NFL Draft Class had at least 16 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jaleel Johnson has a very strong profile as a long-term starter. Elite production across the board, with above average explosiveness and flexibility for his size. Johnson's lack of quality speed caps his overall upside at the next level. Where he will likely never a multiple Pro Bowl or All-Pro

prospect long-term. However, he's has just enough athleticism and production to be one of the safer defensive tackle prospects in this draft class.

Scheme Fit: 3-Tech/1-Tech

Projection: Backup to Long-term Starter

2017 NFL Draft Profiles

Jarron Jones

No	All-Pro and Pro Bowl Athleticism Score: 80.46 or higher	100% of multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least one athleticism score (explosive lower body strength, speed, flexibility) of 80.46 or higher
Yes	All-Pro and Pro Bowl Bench: 21 reps or more	100% of Multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least 21 reps on the bench press
Yes	Starter Bench: 16 reps or more	100% of 64 start or more DTs since the 1998 NFL Draft Class had at least 16 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jarron Jones has some interesting production qualities at Notre Dame. However, his overall athleticism is not getting it done. He failed two athletic thresholds for long-term starters. And

calls into question his viability as even a backup in the NFL. It's unclear why he is testing this poorly in the process, but I'd only value Jones as a reserve to backup only based on his athleticism.

Scheme Fit: 5-Tech

Projection: Reserve to Backup

Yes	Starter Explosive Lower Body Strength Score: 4.64	100% of 64 start or more DTs since the 1996 NFL Draft Class had an explosive lower body strength score of 4.64 or higher.

No	All-Pro Speed Score: 71.41 or higher	100% of All-Pro DTs since the 1998 NFL Draft Class had a speed score of 71.41 or higher
Yes	Pro Bowl Speed Score: 42.03 or higher	100% of Multiple Pro Bowl DTs since the 1998 NFL Draft Class had a speed score of 42.03 or higher
Yes	Starter Speed Score: 11.41 or higher	100% of 64 start or more DTs since the 1998 NFL Draft Class had a speed score of 11.41 or higher
Yes	All-Pro Flexibility Score: 40.83 or higher	100% of Multiple All-Pro DTs since the 1998 NFL Draft Class had a flexibility score of 40.83 or higher
Yes	Pro Bowl Flexibility Score: 25.74	100% of Multiple Pro Bowl DTs since the 1998 NFL Draft Class had a flexibility score of 25.74 or higher
Yes	Starter Flexibility Score: 11.13 or higher	100% of 64 start or more DTs since the 1998 NFL Draft Class had a flexibility score of 11.13 or higher
No	All-Pro and Pro Bowl Athleticism Score: 80.46 or higher	100% of multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least one athleticism score (explosive lower body strength, speed, flexibility) of 80.46 or higher
DNP	All-Pro and Pro Bowl Bench: 21 reps or more	100% of Multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least 21 reps on the bench press
DNP	Starter Bench: 16 reps or more	100% of 64 start or more DTs since the 1998 NFL Draft Class had at least 16 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jonathan Allen has a strong profile as a long-term starting defensive tackle. He has above average production, speed, and flexibility. But he misses the mark on many quality thresholds. Allen has a nice combination of athleticism and production to be an impactful player. However, he will

likely never be considered an elite or near elite defensive tackle long-term due this his athletic deficiencies.

Scheme Fit: 5-Tech

Projection: Backup to Potential Pro Bowler

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jordan Carell has some intriguing athletic qualities. Above average explosiveness and speed. However, he didn't hit many quality production thresholds. I can see a starter based on his

athleticism and production. But I would still only value as backup to potential long-term starter only based on this profile.

Scheme Fit: 3-Tech

Projection: Backup to Potential Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jordan Wade has some above average production and athleticism traits. However, his overall profile is indicative of a backup to reserve only. There are some unknowns with his age as well.

But regardless of age, he simply doesn't have the necessary tools to be a long-term starter production wise.

Scheme Fit: 3-Tech

Projection: Reserve to Backup

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Josh Tupou has some intriguing qualities as a defensive tackle. He has above average production with above average speed for his size. However, he misses the mark on many quality athletic thresholds. Thus, I'd project as a backup to potential long-term starter only. He could become a

starting nose tackle, but nothing suggests a nose tackle that will transcend his roots in a dynamic way in the NFL.

Scheme Fit: Nose Tackle

Projection: Backup to Potential Starter

Yes	Starter Flexibility Score: 11.13 or higher	100% of 64 start or more DTs since the 1998 NFL Draft Class had a flexibility score of 11.13 or higher
Yes	All-Pro and Pro Bowl Athleticism Score: 80.46 or higher	100% of multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least one athleticism score (explosive lower body strength, speed, flexibility) of 80.46 or higher
Yes	All-Pro and Pro Bowl Bench: 21 reps or more	100% of Multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least 21 reps on the bench press
Yes	Starter Bench: 16 reps or more	100% of 64 start or more DTs since the 1998 NFL Draft Class had at least 16 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Larry Ogunjobi has a very strong data profile. Elite explosiveness with above average speed and flexibility for his size. Ogunjobi is a hair off in his MSA rating being Elite due to his level of

competition at Charlotte. However, his profile is littered with positives throughout. Thus, I'd project as a backup to long-term starter with Pro Bowl athletic upside.

Scheme Fit: 3-Tech

Projection: Backup to Potential Pro Bowler

Yes	Starter Bench: 16 reps or more	100% of 64 start or more DTs since the 1998 NFL Draft Class had at least 16 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Malik McDowell has a very strong data profile projecting to 3-4 defensive end. Above average market share production and near elite speed for his size. McDowell's explosiveness score doesn't meet the Pro Bowl threshold, but he has the same explosiveness score as the only outlier in

Richard Seymour. In fact, Seymour and McDowell are almost identical athletes on paper. Thus, I'd project McDowell as a long-term starter to potential Pro Bowl caliber 3-4 defensive end.

Scheme Fit: 5-Tech

Projection: Long-term Starter to Potential Pro Bowler

Yes	All-Pro and Pro Bowl Athleticism Score: 80.46 or higher	100% of multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least one athleticism score (explosive lower body strength, speed, flexibility) of 80.46 or higher
Yes	All-Pro and Pro Bowl Bench: 21 reps or more	100% of Multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least 21 reps on the bench press
Yes	Starter Bench: 16 reps or more	100% of 64 start or more DTs since the 1998 NFL Draft Class had at least 16 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Montravius Adams has a very good starter profile. He misses the mark on high quality upside with his solo tackle market share. However, he has above average athleticism including

elite speed. In addition to decent sack and TFL market share production. Thus, I'd project as a long-term starter to potential Pro Bowler in the future.

Scheme Fit: 3-Tech

Projection: Long-term Starter to Potential Pro Bowler

2017 NFL Draft Profiles

Nazair Jones

Defensive Tackle

Team	North Carolina
Age (On Draft Day)	22.38
Height	6-5
Weight	304

No	All-Pro Flexibility Score: 40.83 or higher	100% of Multiple All-Pro DTs since the 1998 NFL Draft Class had a flexibility score of 40.83 or higher
Yes	Pro Bowl Flexibility Score: 25.74	100% of Multiple Pro Bowl DTs since the 1998 NFL Draft Class had a flexibility score of 25.74 or higher
Yes	Starter Flexibility Score: 11.13 or higher	100% of 64 start or more DTs since the 1998 NFL Draft Class had a flexibility score of 11.13 or higher
No	All-Pro and Pro Bowl Athleticism Score: 80.46 or higher	100% of multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least one athleticism score (explosive lower body strength, speed, flexibility) of 80.46 or higher
No	All-Pro and Pro Bowl Bench: 21 reps or more	100% of Multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least 21 reps on the bench press
Yes	Starter Bench: 16 reps or more	100% of 64 start or more DTs since the 1998 NFL Draft Class had at least 16 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Nazair Jones has a starter profile, but a very weak starter profile. Below average athleticism and good, but not great production overall. Jones can play 5-tech in a 3-4 front. However,

he doesn't have the combination of traits to project a high-quality starter. Thus, I'd project only as a backup to potential long-term starter only.

Scheme Fit: 5-Tech

Projection: Backup to Potential Starter

2017 NFL Draft Profiles

Roderick Henderson

Defensive Tackle

Team	Alabama State
Age (On Draft Day)	24.51
Height	6-1

Yes	All-Pro Flexibility Score: 40.83 or higher	100% of Multiple All-Pro DTs since the 1998 NFL Draft Class had a flexibility score of 40.83 or higher
Yes	Pro Bowl Flexibility Score: 25.74	100% of Multiple Pro Bowl DTs since the 1998 NFL Draft Class had a flexibility score of 25.74 or higher
Yes	Starter Flexibility Score: 11.13 or higher	100% of 64 start or more DTs since the 1998 NFL Draft Class had a flexibility score of 11.13 or higher
Yes	All-Pro and Pro Bowl Athleticism Score: 80.46 or higher	100% of multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least one athleticism score (explosive lower body strength, speed, flexibility) of 80.46 or higher
Yes	All-Pro and Pro Bowl Bench: 21 reps or more	100% of Multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least 21 reps on the bench press
Yes	Starter Bench: 16 reps or more	100% of 64 start or more DTs since the 1998 NFL Draft Class had at least 16 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Roderick Henderson has some impressive athletic qualities. Elite explosiveness with above average speed and flexibility. His age and length lower his upside on paper. Which hurts him as his production from the FCS does not have a large enough sample size to feel confident about.

However, I believe you should value Henderson as a backup to potential long-term starter based on athleticism alone.

Just don't draft too high due to the risks in his age and level of competition he faced.

Scheme Fit: Nose Tackle

Projection: Backup to Potential Starter

2017 NFL Draft Profiles

Yes	Starter Bench: 16 reps or more	100% of 64 start or more DTs since the 1998 NFL Draft Class had at least 16 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Soloman Thomas has a very strong profile whether inside or out. Elite production and elite speed/flexibility for his size. His size at 273 is on the lower end scale of past interior players who

gained weight in the NFL. However, it's clear that Soloman Thomas should be viewed as true mismatch piece. Wherever you line him up, inside or out you will dominant.

Thus, I'd project as a Pro Bowl caliber defensive lineman for the near future.

Scheme Fit: 3-Tech

Projection: Long-term Starter to Pro Bowler

No	Pro Bowl TFL Market Share Score: 50.87 or higher	100% of multiple Pro Bowl DTs since the 1989 NFL Draft Class had a TFL market share score of 50.87 or higher
No	All-Pro Height: 6-4 or Taller	75% of Multiple All-Pro DTs since the 1990 NFL Draft Class were 6-4 or Taller
Yes	Pro Bowl Height: 6-1 or Taller	100% of Multiple Pro Bowl Edge Rushers since the 1990 NFL Draft Class were 6-1 or Taller
Yes	All-Pro and Pro Bowl Arm Length: 32'' or Longer	100% of multiple All-Pro and Pro Bowl DTs since the 1999 NFL Draft class had 32'' or longer Arm Length
Yes	All-Pro and Pro Bowl Hand Size: 8 7/8'' or Bigger	100% of Multiple All-Pro and Pro Bowl DTs since the 1999 NFL Draft class had 8 7/8'' or Bigger
No	All-Pro Explosive Lower Body Strength Score: 66.96 or higher	86% of Multiple All-Pro DTs since the 1998 NFL Draft Class had an explosive lower body strength score of 66.96
No	Pro Bowl Explosive Lower Body Strength Score: 51 or higher	90% of multiple Pro Bowl DTs since the 1998 NFL Draft Class had an explosive lower body strength score of 51 or higher.
Yes	Starter Explosive Lower Body Strength Score: 4.64	100% of 64 start or more DTs since the 1996 NFL Draft Class had an explosive lower body strength score of 4.64 or higher.

No	All-Pro Speed Score: 71.41 or higher	100% of All-Pro DTs since the 1998 NFL Draft Class had a speed score of 71.41 or higher
No	Pro Bowl Speed Score: 42.03 or higher	100% of Multiple Pro Bowl DTs since the 1998 NFL Draft Class had a speed score of 42.03 or higher
Yes	Starter Speed Score: 11.41 or higher	100% of 64 start or more DTs since the 1998 NFL Draft Class had a speed score of 11.41 or higher
Yes	All-Pro Flexibility Score: 40.83 or higher	100% of Multiple All-Pro DTs since the 1998 NFL Draft Class had a flexibility score of 40.83 or higher
Yes	Pro Bowl Flexibility Score: 25.74	100% of Multiple Pro Bowl DTs since the 1998 NFL Draft Class had a flexibility score of 25.74 or higher
Yes	Starter Flexibility Score: 11.13 or higher	100% of 64 start or more DTs since the 1998 NFL Draft Class had a flexibility score of 11.13 or higher
No	All-Pro and Pro Bowl Athleticism Score: 80.46 or higher	100% of multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least one athleticism score (explosive lower body strength, speed, flexibility) of 80.46 or higher
Yes	All-Pro and Pro Bowl Bench: 21 reps or more	100% of Multiple All-Pro and Pro Bowl DTs since the 1998 NFL Draft Class had at least 21 reps on the bench press
Yes	Starter Bench: 16 reps or more	100% of 64 start or more DTs since the 1998 NFL Draft Class had at least 16 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Steve Tu''ikolovtu looks the part of a nose tackle. But his athleticism and production miss the mark for quality outcomes. And yes, nose tackles are usually not very productive or athletic.

However, quality nose tackles are. Thus, I'd project Steve Tu''ikolovtu as a backup to potential long-term starting nose tackle only.

Scheme Fit: Nose Tackle

Projection: Backup to Potential Starter

2017 NFL Draft Profiles

Tanzel Smart

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Tanzel Smart has a strong profile as a long-term starting defensive tackle. He's like Kerry Hyder Jr. in terms of physical measures, production, and athleticism. The nitpicks in Smart's

profile are below average explosiveness, speed, and production from a weaker schedule. However, Smart has the components to be a very productive starter or depth option as a backup.

Scheme Fit: 3-Tech

Projection: Backup to Long-term Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Tueni Lupeamanu has an impressive long-term starter profile. He has above average production and athleticism traits. What he lacks in height can throw the NFL off a bit. However, if he's

given an opportunity, he could be an impressive 3-Tech. Thus, I'd project as a backup to long-term starter with a decent chance of becoming a Pro Bowl like outlier if he's given the opportunity.

Scheme Fit: 3-Tech

Projection: Backup to Potential Pro Bowler

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Vincent Taylor has a solid long-term starter profile. Above average production and athleticism. He misses the mark in terms of hitting quality production and various athleticism

threshold. However, there are a decent number of positives here. I'd project Taylor as a backup to potential long-term starter.

Scheme Fit: 5-Tech

Projection: Backup to Potential Starter

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Scheme Fit: 3-Tech

Projection: Backup to Long-term Starter

LB

To avoid confusion, the linebackers in this section are pursuit linebackers. 3-4 outside linebackers or rush linebackers are covered in the Edge section. Now, pursuit linebackers are another one of the positions where there is a lack of understanding as to what it takes to be elite. Which all boils down to solo tackle market share production. This is the one position where the difference between elite and average is starkest in terms of market share.

Every single multiple All-Pro linebacker since the 1996 NFL draft class scored in the 91 or higher percentile of solo tackle market share. If you think about the best pursuit linebackers in the last twenty years. You will likely think of Luke Kuechly, Ray Lewis, Patrick Willis, Brian Urlacher or Navarro Bowman. And all those linebackers scored in the high 90 percentiles of solo tackle market share. It speaks to their ability to be a primary enforcer in the second level of the defense, their ability to stay healthy and their consistency week to week.

You will have linebackers who have one big game, or performance. And I've seen many evaluators base your entire evaluation on that one game in projection. When the data says that the collective performances form who this player truly is. Some will bring up scheme as a rebuttal to this information, but there just haven't been any examples in the last two decades of an elite NFL linebacker who was hidden by the scheme they were playing in college. Pursuit linebacker is a reactionary position where football intelligence is rewarded with production.

So being slow to recognize offenses and miss on opportunities to make an impact is something elite players don't often do. The best linebackers to ever grace the football field rarely misinterpreted what offenses were trying to do to them. And thus, had high solo tackle production. In many ways, solo tackle production is a test of instincts as much the ability to make a tackle in space. Keep this in mind when evaluating, and you will start to recognize which linebackers have a good chance of being elite.

Other than production, the rest of the profiles below go into various height, arm length and hand size thresholds over the last ten plus seasons. In addition to athleticism thresholds. Each should provide some context to the numbers that get reported. And provide greater depth of knowledge on what it takes to be a great linebacker at the next level.

2017 NFL Draft Profiles

Yes	Starter Explosive Lower Body Strength Score: 8.96 or higher	100% of 64 start or more LBs since the 1996 NFL Draft class had an explosive lower body strength score of 8.96 or higher
No	All-Pro Speed Score: 77.27 or higher	100% of multiple All-Pro LBs since the 1996 NFL Draft class had a speed score of 77.27 or higher
Yes	Pro Bowl Speed Score: 64.08 or higher	83% of multiple Pro Bowl LBs since the 1996 NFL Draft class had a speed score of
Yes	Starter Speed Score: 6.45 or higher	100% of 64 start or more LBs since the 1996 NFL Draft class had a speed score of 6.45 or higher
Yes	All-Pro Flexibility Score: 77.27 or higher	100% of multiple All-Pro LBs since the 1996 NFL Draft class had a flexibility score of 77.27 or higher
Yes	Pro Bowl Flexibility Score: 61.21 or higher	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had a flexibility score of 61.21 or higher
Yes	Starter Flexibility Score: 1.72 or higher	100% of 64 start or more LBs since the 1996 NFL Draft class had a flexibility score of 1.72 or higher
No	All-Pro Bench: 22 or more reps	100% of multiple All-Pro LBs since the 1996 NFL Draft class had 22 or more bench reps

No	Pro Bowl Bench: 17 or more reps	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had 17 or more bench reps
Yes	Starter Bench: 15 or more reps	100% of 64 start or more LBs since the 1996 NFL Draft class had 15 or more bench reps

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Alex Anzalone has a decent starting linebacker profile. Above average speed and flexibility for his size. What limits his upside is below average explosiveness and average solo tackle market share production. Some players with his profile make it due to their athleticism. But there is also a sea of athletes with his production profile that flamed out.

Projection: Backup to Potential Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Anthony Walker Jr. has a solid profile as a long-term starting linebacker prospect. But there are many variables from arm length, explosiveness and flexibility cap his upside. However, there are a lot of very strong aspects to this profile from his production to age. I'd project Walker Jr. as a long-term starter only.

Projection: Backup to Long-term Starter

Yes	Starter Bench: 15 or more reps	100% of 64 start or more LBs since the 1996 NFL Draft class had 15 or more bench reps

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Ben Boulware has decent potential starter profile. Above average flexibility. But his length, production and below average explosiveness/speed are not ideal. Thus, I'd project as a reserve to backup with a slight chance of becoming a starter due to flexibility. However, this profile often ends up being a bust as a starter.

Projection: Reserve to Backup

		MSA Rating score of 50.10 or higher
No	All-Pro Solo Tackle MS Production: 90 or Higher	100% of Multiple All-Pro LBs since the 1996 NFL Draft Class were in the 90 or Higher Percentile of Solo Tackle Market Share Production
No	Pro Bowl Solo Tackle MS Production: 77 or Higher	100% of Multiple Pro Bowl LBs since the 1996 NFL Draft Class were in the 77 or Higher Percentile of Solo Tackle Market Share Production
Yes	All-Pro and Pro Bowl Height: 6-1 or Taller	100% of multiple All-Pro and Pro Bowl LBs since the 1996 NFL Draft Class were 6-1 or Taller
Yes	All-Pro and Pro Bowl Arm Length: 31'' or Longer	100% of multiple All-Pro LBs since the 1996 NFL Draft class had 31'' or longer Arm Length
Yes	All-Pro and Pro Bowl Hand Size: 8 3/4'' or Bigger	100% of Multiple All-Pro LBs since the 1996 NFL Draft class had 8 3/4'' or Bigger
No	All-Pro Explosive Lower Body Strength Score: 83.15 or higher	83% of multiple All-Pro LBs since the 1996 NFL Draft class had an explosive lower body strength score of 83.15 or higher
Yes	Pro Bowl Explosive Lower Body Strength Score: 65 or higher	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had an explosive lower body strength score of 65 or higher
Yes	Starter Explosive Lower Body Strength Score: 8.96 or higher	100% of 64 start or more LBs since the 1996 NFL Draft class had an explosive lower body strength score of 8.96 or higher
No	All-Pro Speed Score: 77.27 or higher	100% of multiple All-Pro LBs since the 1996 NFL Draft class had a speed score of 77.27 or higher
No	Pro Bowl Speed Score: 64.08 or higher	83% of multiple Pro Bowl LBs since the 1996 NFL Draft class had a speed score of
Yes	Starter Speed Score: 6.45 or higher	100% of 64 start or more LBs since the 1996 NFL Draft class had a speed score of 6.45 or higher
Yes	All-Pro Flexibility Score: 77.27 or higher	100% of multiple All-Pro LBs since the 1996 NFL Draft class had a flexibility score of 77.27 or higher
Yes	Pro Bowl Flexibility Score: 61.21 or higher	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had a flexibility score of 61.21 or higher
Yes	Starter Flexibility Score: 1.72 or higher	100% of 64 start or more LBs since the 1996 NFL Draft class had a flexibility score of 1.72 or higher
Yes	All-Pro Bench: 22 or more reps	100% of multiple All-Pro LBs since the 1996 NFL Draft class had 22 or more bench reps

Yes	Pro Bowl Bench: 17 or more reps	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had 17 or more bench reps
Yes	Starter Bench: 15 or more reps	100% of 64 start or more LBs since the 1996 NFL Draft class had 15 or more bench reps

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Ben Gedeon has a solid potential long-term starter profile. Above average explosiveness, speed, and flexibility. The issue that caps his upside is average solo tackle market share. And he didn't hit a quality speed threshold. Thus, I'd value as a backup to long-term starter only.

Projection: Backup to Long-term Starter

Yes	All-Pro Bench: 22 or more reps	100% of multiple All-Pro LBs since the 1996 NFL Draft class had 22 or more bench reps

Yes	Pro Bowl Bench: 17 or more reps	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had 17 or more bench reps
Yes	Starter Bench: 15 or more reps	100% of 64 start or more LBs since the 1996 NFL Draft class had 15 or more bench reps

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Blair Brown has a strong long-term starter profile. Elite explosiveness and flexibility for his size. With above average speed and Pro Bowl level market share production. What hurts his profile in terms of becoming a Pro Bowl or All-Pro player is height, strength of schedule that influences his production and age. But I'd still project as a long-term starter due to the production and athleticism meeting up for him.

Projection: Backup to Long-term Starter

Yes	Starter Flexibility Score: 1.72 or higher	100% of 64 start or more LBs since the 1996 NFL Draft class had a flexibility score of 1.72 or higher
No	All-Pro Bench: 22 or more reps	100% of multiple All-Pro LBs since the 1996 NFL Draft class had 22 or more bench reps

Yes	Pro Bowl Bench: 17 or more reps	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had 17 or more bench reps
Yes	Starter Bench: 15 or more reps	100% of 64 start or more LBs since the 1996 NFL Draft class had 15 or more bench reps

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Brooks Ellis has an uneven long-term starting profile. He has above average flexibility for his size. But below average explosiveness and speed. In addition to less than ideal solo tackle market share production. Thus, I'd project as a backup to potential long-term starter only.

Projection: Backup to Potential Starter

Yes	Pro Bowl Explosive Lower Body Strength Score: 65 or higher	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had an explosive lower body strength score of 65 or higher
Yes	Starter Explosive Lower Body Strength Score: 8.96 or higher	100% of 64 start or more LBs since the 1996 NFL Draft class had an explosive lower body strength score of 8.96 or higher
No	All-Pro Speed Score: 77.27 or higher	100% of multiple All-Pro LBs since the 1996 NFL Draft class had a speed score of 77.27 or higher
Yes	Pro Bowl Speed Score: 64.08 or higher	83% of multiple Pro Bowl LBs since the 1996 NFL Draft class had a speed score of
Yes	Starter Speed Score: 6.45 or higher	100% of 64 start or more LBs since the 1996 NFL Draft class had a speed score of 6.45 or higher
Yes	All-Pro Flexibility Score: 77.27 or higher	100% of multiple All-Pro LBs since the 1996 NFL Draft class had a flexibility score of 77.27 or higher
Yes	Pro Bowl Flexibility Score: 61.21 or higher	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had a flexibility score of 61.21 or higher
Yes	Starter Flexibility Score: 1.72 or higher	100% of 64 start or more LBs since the 1996 NFL Draft class had a flexibility score of 1.72 or higher
Yes	All-Pro Bench: 22 or more reps	100% of multiple All-Pro LBs since the 1996 NFL Draft class had 22 or more bench reps

Yes	Pro Bowl Bench: 17 or more reps	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had 17 or more bench reps
Yes	Starter Bench: 15 or more reps	100% of 64 start or more LBs since the 1996 NFL Draft class had 15 or more bench reps

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Calvin Munson has a solid starter profile. Above average production with above average speed and near elite flexibility for his size. Munson's biggest issues are not producing at a high level against below average competition in the Mountain West. In addition to below average explosiveness. Thus, I'd project as a backup to long-term starter only.

Projection: Backup to Long-term starter

Yes	Starter Bench: 15 or more reps	100% of 64 start or more LBs since the 1996 NFL Draft class had 15 or more bench reps

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Cody Heiman is an impressive athlete. However, his production at his level of competition is very low. Even if he was a FBS linebacker, his production would be in the unsatisfactory range. In addition to other unknowns such as arm length and age. Thus, I'd project Heiman as a reserve to backup only with a slight chance of becoming a spot starter due to athleticism.

Projection: Reserve to Backup

Yes	Starter Bench: 15 or more reps	100% of 64 start or more LBs since the 1996 NFL Draft class had 15 or more bench reps

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Connor Harris has potential as a long-term starting linebacker based on athleticism alone. But due to his production at the FCS/DII/DIII level. The focus will be purely on athleticism and physical measures. Harris doesn't meet All-Pro or Pro Bowl physical measures from height to arm length. However, I'd still project as a backup to potential long-term starter due to his above average athleticism traits.

Projection: Backup to Potential Starter

Yes	Starter Flexibility Score: 1.72 or higher	100% of 64 start or more LBs since the 1996 NFL Draft class had a flexibility score of 1.72 or higher
No	All-Pro Bench: 22 or more reps	100% of multiple All-Pro LBs since the

		1996 NFL Draft class had 22 or more bench reps
Yes	Pro Bowl Bench: 17 or more reps	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had 17 or more bench reps
Yes	Starter Bench: 15 or more reps	100% of 64 start or more LBs since the 1996 NFL Draft class had 15 or more bench reps

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Dakota Cox has a slight chance of becoming a starter. Due to his production and age. However, his overall athleticism is very low. Making him have the upside of a bare minimum starter. Thus, I'd only project as a reserve to backup only with a slight chance to become a spot starter.

Projection: Reserve to Backup

Yes	Pro Bowl Bench: 17 or more reps	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had 17 or more bench reps
Yes	Starter Bench: 15 or more reps	100% of 64 start or more LBs since the 1996 NFL Draft class had 15 or more bench reps

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Duke Riley has an intriguing long-term starter data profile. Above average explosiveness, speed, and elite flexibility for his size. Riley misses high quality marks in height and solo tackle market share production. However, there are enough indicators here to envision a starter at the very least. Thus, I'd project Riley as a long-term starter.

Projection: Backup to Long-term Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Elijah Lee has a solid long-term starter profile. Above average athleticism and production. He's biggest issues are lacking elite or even near elite speed and flexibility for his size. His numbers would have been more impressive if he was 240 pounds, but he was 229. Thus, I'd only value Lee as a backup to long-term starter only.

Projection: Backup to Long-term Starter

No	Pro Bowl Flexibility Score: 61.21 or higher	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had a flexibility score of 61.21 or higher
Yes	Starter Flexibility Score: 1.72 or higher	100% of 64 start or more LBs since the 1996 NFL Draft class had a flexibility score of 1.72 or higher
No	All-Pro Bench: 22 or more reps	100% of multiple All-Pro LBs since the

		1996 NFL Draft class had 22 or more bench reps
No	Pro Bowl Bench: 17 or more reps	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had 17 or more bench reps
No	Starter Bench: 15 or more reps	100% of 64 start or more LBs since the 1996 NFL Draft class had 15 or more bench reps

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Fletcher Collins has some unique athletic traits. Above average explosiveness and speed. However, his age, below average speed and production from FCS level muddle his profile. Even if he was an FBS prospect his production would not be quality. Thus, I'd project Collins as a reserve to backup only with a slight chance of potential as a starter due to athletic traits.

Projection: Reserve to Backup

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Haason Reddick does not have a risk-free profile at pursuit linebacker. His profile at Edge as a 4-3 Sam is where his data traits make the most sense in projection. At LB, he has elite explosiveness and speed with the right size. However, he does not have the type of solo tackle market share indicative of a Pro Bowl or All-Pro linebackers. Players with Reddick's athleticism and solo tackle production are DeAndre Levy, Bruce Carter, Jameel McClain, Philip Wheeler, Scott Fujita, Will Witherspoon and Manny Lawson.

Those are positive outcomes, but none of those players became elite. So, while Reddick has the profile on the surface of an elite pursuit linebacker. And Reddick can learn the nuances of the position. It's just not easy to become elite at the pursuit linebacker position as you go. You either are elite, or you are not.

In Reddick's case, he can become a pursuit linebacker. But the position that will maximize his potential. Fulfill the promise he showed at Temple is at Edge. And there's no getting around the fact. That projecting Reddick to pursuit linebacker is the equivalent of clipping a wing off a bird and then asking it to fly.

Projection: Backup to Long-term Starter

Yes	Starter Flexibility Score: 1.72 or higher	100% of 64 start or more LBs since the 1996 NFL Draft class had a flexibility score of 1.72 or higher
No	All-Pro Bench: 22 or more reps	100% of multiple All-Pro LBs since the 1996 NFL Draft class had 22 or more bench reps

Yes	Pro Bowl Bench: 17 or more reps	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had 17 or more bench reps
Yes	Starter Bench: 15 or more reps	100% of 64 start or more LBs since the 1996 NFL Draft class had 15 or more bench reps

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Hardy Nickerson has a weak data profile as a potential starter. Below average athleticism in every area. With only slightly above average solo tackle market share. There is always a chance a linebacker can develop into a starter with bare minimum athleticism. However, I would value Nickerson as only a reserve to backup caliber player only.

Projection: Reserve to Backup

Yes	All-Pro Bench: 22 or more reps	100% of multiple All-Pro LBs since the 1996 NFL Draft class had 22 or more bench reps

Yes	Pro Bowl Bench: 17 or more reps	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had 17 or more bench reps
Yes	Starter Bench: 15 or more reps	100% of 64 start or more LBs since the 1996 NFL Draft class had 15 or more bench reps

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Harvey Langi has the athleticism and physical profile of a Pro Bowl linebacker. But his age and production profile are not getting it done. There is a chance he could become a spot starter with his athleticism. However, he won't be a great spot starter and will be out of his prime athletically in three seasons. Thus, I'd project as a reserve to backup only.

Projection: Reserve to Backup

Yes	Starter Bench: 15 or more reps	100% of 64 start or more LBs since the 1996 NFL Draft class had 15 or more bench reps

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jarrad Davis has a great starter profile. Above average production, elite explosiveness, and near elite speed. Where Davis falls short is in his production. He did not hit All-Pro or even Pro Bowl level production. Thus, I'd project as a backup to long-term starter only.

Projection: Backup to Long-term Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jayon Brown has impressive production with lackluster athleticism. But he didn't fail any athleticism marks as a starter. Thus, I'd project Brown as a backup to long-term starter. Production matters a lot more than pure athleticism at linebacker. So, despite Brown not being someone I'd ever view to develop into a high-quality backer. His floor based on production is higher than athletic projects.

Projection: Backup to Long-term Starter

Yes	All-Pro and Pro Bowl Age Percentile: 54 or Higher	100% of Multiple All-Pro and Pro Bowl LBs Since the 1996 NFL Draft Class were in the 54 Percentile or Higher of age ranked from youngest to oldest
Yes	All-Pro and Pro Bowl MSA Rating Score: 84.22 or Higher	100% of Multiple All-Pro and Pro Bowl LBs since the 1996 NFL Draft Class had an MSA Rating score of 84.22 or Higher
Yes	Starter MSA Rating Score: 50.10 or Higher	91.2% of Multiple 64 Start or more LBs since the 1996 NFL Draft Class had an

		MSA Rating score of 50.10 or higher
No	All-Pro Solo Tackle MS Production: 90 or Higher	100% of Multiple All-Pro LBs since the 1996 NFL Draft Class were in the 90 or Higher Percentile of Solo Tackle Market Share Production
Yes	Pro Bowl Solo Tackle MS Production: 77 or Higher	100% of Multiple Pro Bowl LBs since the 1996 NFL Draft Class were in the 77 or Higher Percentile of Solo Tackle Market Share Production
Yes	All-Pro and Pro Bowl Height: 6-1 or Taller	100% of multiple All-Pro and Pro Bowl LBs since the 1996 NFL Draft Class were 6-1 or Taller
Yes	All-Pro and Pro Bowl Arm Length: 31'' or Longer	100% of multiple All-Pro LBs since the 1996 NFL Draft class had 31'' or longer Arm Length
Yes	All-Pro and Pro Bowl Hand Size: 8 3/4'' or Bigger	100% of Multiple All-Pro LBs since the 1996 NFL Draft class had 8 3/4'' or Bigger
No	All-Pro Explosive Lower Body Strength Score: 83.15 or higher	83% of multiple All-Pro LBs since the 1996 NFL Draft class had an explosive lower body strength score of 83.15 or higher
No	Pro Bowl Explosive Lower Body Strength Score: 65 or higher	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had an explosive lower body strength score of 65 or higher
Yes	Starter Explosive Lower Body Strength Score: 8.96 or higher	100% of 64 start or more LBs since the 1996 NFL Draft class had an explosive lower body strength score of 8.96 or higher
No	All-Pro Speed Score: 77.27 or higher	100% of multiple All-Pro LBs since the 1996 NFL Draft class had a speed score of 77.27 or higher
No	Pro Bowl Speed Score: 64.08 or higher	83% of multiple Pro Bowl LBs since the 1996 NFL Draft class had a speed score of
Yes	Starter Speed Score: 6.45 or higher	100% of 64 start or more LBs since the 1996 NFL Draft class had a speed score of 6.45 or higher
No	All-Pro Flexibility Score: 77.27 or higher	100% of multiple All-Pro LBs since the 1996 NFL Draft class had a flexibility score of 77.27 or higher
No	Pro Bowl Flexibility Score: 61.21 or higher	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had a flexibility score of 61.21 or higher
Yes	Starter Flexibility Score: 1.72 or higher	100% of 64 start or more LBs since the 1996 NFL Draft class had a flexibility score of 1.72 or higher
No	All-Pro Bench: 22 or more reps	100% of multiple All-Pro LBs since the 1996 NFL Draft class had 22 or more bench reps

Yes	Pro Bowl Bench: 17 or more reps	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had 17 or more bench reps
Yes	Starter Bench: 15 or more reps	100% of 64 start or more LBs since the 1996 NFL Draft class had 15 or more bench reps

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Kenneth Olugbode has impressive production and length. But his size and athleticism are not ideal. Below average across the board. And he is a bare minimum starter athlete. Thus, I'd project as backup to spot starter only.

Projection: Backup to Spot Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Raekwon McMillan has a solid starting profile. Above average athleticism with near elite speed. In addition to Pro Bowl level solo tackle market share. The area where he falls short in projecting quality outcomes is his explosiveness. However, there are enough positives in his profile to project as a long-term starter to potential Pro Bowler due to his speed.

Projection: Long-term Starter to Potential Pro Bowler

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Reuben Foster has an average starter profile. Even without his athleticism testing and bench press. He did not hit All-Pro or Pro Bowl level solo tackle market share production. To go with being an older prospect as well. And if you think it is bright to take a linebacker top 10 who hasn't proven he has elite athletic upside with a production profile like this.

Then you will reap the consequences. There are legit concerns on film with Foster. But people get so wrapped up with traits, that they don't step back to see the bigger picture here. He's not a special linebacker. And he's not going to be a terrible linebacker either.

But I can't sit here and allow a player like Foster to go this high without trying to warn people. With various draft analysts comparing him to linebackers he has no business being compared to. He would be unprecedented for a linebacker with his production profile to be a multiple All-Pro or even a Pro Bowler. His actual value if he tested average as an athlete is a backup to long-term starter. But with no athleticism testing, I will not engage in an exercise of Russian Roulette with Foster either.

Projection: Backup to Long-term Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Rodney Butler has great production and some above average athleticism traits. However, not knowing his age and no physical measures make his profile uneven. He could develop into a long-term starter in the right system. However, he will never be ideal in a system asking him to cover in man that often. Thus, I'd project as a backup to long-term starter only.

Projection: Backup to Long-term Starter

No	Pro Bowl Flexibility Score: 61.21 or higher	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had a flexibility score of 61.21 or higher
Yes	Starter Flexibility Score: 1.72 or higher	100% of 64 start or more LBs since the 1996 NFL Draft class had a flexibility score of 1.72 or higher
DNP	All-Pro Bench: 22 or more reps	100% of multiple All-Pro LBs since the

		1996 NFL Draft class had 22 or more bench reps
DNP	Pro Bowl Bench: 17 or more reps	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had 17 or more bench reps
DNP	Starter Bench: 15 or more reps	100% of 64 start or more LBs since the 1996 NFL Draft class had 15 or more bench reps

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Tanner Vallejo has an uneven data profile. Above average speed for his size, but his production. And production for his level of competition is poor. In addition to less than ideal arm length for the position. Since he has starter athleticism, there is a chance. However, I'd project as a reserve to backup only due to his poor market share production.

Projection: Backup to Spot Starter

No	Pro Bowl Bench: 17 or more reps	100% of multiple Pro Bowl LBs since the 1996 NFL Draft class had 17 or more bench reps
Yes	Starter Bench: 15 or more reps	100% of 64 start or more LBs since the 1996 NFL Draft class had 15 or more bench reps

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Zach Cunningham profiles well as a long-term starter. But he lacks many of the variables indicative of a potential All-Pro to Pro Bowl caliber player. Average athleticism across the board and only hit the starter level bench threshold. However, the positives from production and hitting decent athleticism marks make Cunningham one of the safer linebackers in projection. Thus, I'd project Cunningham as a long-term starter.

Projection: Backup to Long-term Starter

CB

I can't tell you how many times I've heard the argument of: how can you produce at cornerback when you are so good that no one throws at you? Yet every piece of production data at cornerback I've collected from solo tackle market share to pass deflection market share disagrees with this argument. And while the scheme a cornerback plays in can make differences in certain production marks, there is still a clear threshold in both statistics. The greatest cornerbacks of all time from Deion Sanders, Charles Woodson, Champ Bailey, and many other All-Pro cornerbacks since the 1989 NFL draft class had above average solo tackle and pass deflection market share in their careers. The best corners to ever grace an NFL football field made their presence felt on the stat sheet.

If a quarterback started to not throw their way, they would bait them into interceptions. It's that next level intelligence and athleticism that made them someone you could not deny. And with the proliferation of the screen game in the NFL. It is more important than ever to find corners who make significant impacts fighting off blocks and making solo tackles. There is no excuse to not make an impact anymore.

The amount and depth of data showing that production is a significant indicator of quality at cornerback is too high to ignore. And no matter how many charts you pull up to explain away why they couldn't be at the very least above average is mind numbing to me. It's like telling a man that the world is flat when every piece of data out there says its round. As the wheels of fate in spread offenses make the average production at cornerback higher every year. So essentially, pay attention to the production thresholds at cornerback.

The last topic I wanted to address before the profiles is height and arm length. There is a significant amount of data pointing toward the cream of the crop cornerbacks having above average height and arm length. However, this doesn't make corner prospects who are below average not important, or potentially impactful players. It just means that the chances of those shorter cornerbacks being good vs. great is higher. It's best to approach this position with the tools to identity the prime cuts from the lower cuts, but to also remember that a good defensive coordinator with the proper scheme can make a fabulous dinner with lesser cuts.

Enjoy the profiles below. And I hope this will open your eyes to what production and physical characteristics mean in the grand scheme of projection.

Yes	Starter Bench Reps: 4 reps or more	100% of 64 start or more CBs since the 1998 NFL Draft class had at least 4 reps on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Aarion Penton has a decent potential starter profile with some red flags. His production is impressive hitting all quality thresholds. In addition to above average explosiveness. But his below average speed and flexibility limits his scheme versatility. Thus, I'd project as a backup to potential starter in the slot.

Ideal Scheme: Zone/Slot

Projection: Backup to Potential Starter

Yes	All-Pro/Pro Bowl 3-Cone: 7.03 or Less	92% of multiple All-Pro or Pro Bowl CBs since the 1998 NFL Draft Class had a 3-Cone of 7.03 or Less

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Adoree Jackson has a solid long-term starter profile. Above average production and athleticism. He misses the mark on quality outcomes due to his low pass deflection market share. However, there is enough positives for him to be a starter. I'd project Jackson as backup to long-term starter only due to his pass deflection market share issues, but he could be one heck of a slot corner.

Ideal Scheme: Zone/Slot/Press/Man

Projection: Backup to Long-term Starter

DNP	Starter Bench Reps: 4 reps or more	100% of 64 start or more CBs since the 1998 NFL Draft class had at least 4 reps on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Ahkello Witherspoon has a Pro Bowl potential profile. Above average pass deflection market share with above average athleticism. He misses the mark at All-Pro upside due to his age, solo tackle market share and speed/flexibility. However, he has the right combination of traits to be a strong projection as a starter. Thus, I'd project Witherspoon as a long-term starter to potential Pro Bowl caliber cornerback.

Ideal Scheme: Zone/Slot

Projection: Starter to Multiple Pro Bowler

Yes	Starter Bench Reps: 4 reps or more	100% of 64 start or more CBs since the 1998 NFL Draft class had at least 4 reps on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Brad Watson has an uneven potential starter profile. His age and production are phenomenal. But his below average speed and flexibility are issues. He failed to hit the bare minimum flexibility threshold for long-term starters. Thus, I'd project as a reserve to backup only with a small chance to become a starter based on his production and age.

Ideal Scheme: Zone/Slot

Projection: Reserve to Backup

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Brendan Langley did not produce against FBS competition to determine his production score. But he does have some NFL athleticism traits. He has above average speed and decent physical measures. However, Langley's below average explosiveness and flexibility is not getting it done though. Thus, I'd project Langley as a reserve to backup only.

Ideal Scheme: Man

Projection: Reserve to Backup

Yes	Starter Bench Reps: 4 reps or more	100% of 64 start or more CBs since the 1998 NFL Draft class had at least 4 reps on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Chidobe Awuzie profiles more as a safety than a cornerback. However, he does not test poorly at corner. He has elite explosiveness with above average speed and flexibility for his size. He lacks length and great pass deflection market share. Thus, I'd project Awuzie as a long-term starter only as a boundary cornerback.

Ideal Scheme: Any

Projection: Long-term Starter at CB

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Cole Luke has a starting zone corner athletic profile. But his overall production and other unknowns are an issue. Without knowing his age and arm length makes the rest of his poor production profile look uncertain. But there are enough positives to project as a reserve to backup. With a slight chance of becoming a starter due to athleticism traits.

Ideal Scheme: Zone/Slot/Man

Projection: Reserve to Backup

Yes	Starter Bench Reps: 4 reps or more	100% of 64 start or more CBs since the 1998 NFL Draft class had at least 4 reps on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Cordrea Tankersly can trick a lot of people into thinking he's something he's not. He has above average speed and flexibility for his size. However, his production, below average explosiveness and age make quality outcomes very low. Becoming a long-term starter is questionable considering his production and age. Thus, I'd project as a backup to potential long-term starter only.

Ideal Scheme: Zone/Press/Man

Projection: Backup to Potential Starter

DNP	Starter Bench Reps: 4 reps or more	100% of 64 start or more CBs since the 1998 NFL Draft class had at least 4 reps on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Corn Elder has a shaky starter profile. Impressive production across the board. But the athleticism tests he performed in were below average. In addition to not performing his short shuttle/3-Cone to determine flexibility. Thus, I'd project as backup to potential starter in the slot only on his production traits.

Ideal Scheme: Zone/Slot

Projection: Backup to Potential Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Desmond King has a decent starter profile. Above average production and athleticism traits. He misses high quality outcomes due to his speed, age, explosiveness, and pass deflection market share. But there are plenty of positives to point to in this profile. Thus, I'd project as a backup to long-term starter.

Ideal Scheme: Zone/Slot/Press

Projection: Backup to Long-term Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Fabian Moreau has impressive athleticism traits. But he lacks elite length and elite production. There are numerous flags with health history as well. However, the bottom-line is Moreau is the best cornerback athlete in the class, but his production doesn't match. Thus, I'd project Moreau only as a backup to long-term starter only.

Ideal Scheme: Any

Projection: Backup to Long-term Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Gareon Conley has Pro Bowl athleticism traits. But his production doesn't match his athleticism. Lots of positives here including length. However, Conley is the type of cornerback that can be overvalued based on athleticism that cashes checks his production can't pay. Thus, I'd value as a backup to long-term starter only.

Ideal Scheme: Any

Projection: Backup to Long-term Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Howard Wilson has an uneven data profile. Above average solo tackle market share and flexibility for his size. Wilson's biggest issues are his below average speed and explosiveness. Where there have been 0 long-term starters since 1999 with his explosiveness score. Thus, I'd project Wilson as a reserve to backup only with a slim chance of becoming a long-term starter.

Ideal Scheme: Zone/Slot/Press

Projection: Backup to Long-term Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jack Tocho has a solid long-term starter profile. Above average production and athleticism. He misses the mark as a high-quality player due to only slightly above average speed and flexibility. However, his explosiveness can be an ideal asset in a zone scheme. I'd project as backup to long-term starter with a solid overall profile.

Ideal Scheme: Zone/Slot

Projection: Backup to Long-term Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jalen Myrick has impressive athleticism for the cornerback position. Elite explosiveness and speed for his size. However, his poor solo tackle market share and an average MSA rating make Myrick more of a candidate to start vs. a Pro Bowl or All-Pro player. His height and length also cap his upside too. But there is a good chance Myrick could have a strong stretch of seasons based on athleticism alone.

Ideal Scheme: Any

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Joshua Holsey has some positives in his profile. He has above average speed. But his overall profile is not conducive to a long-term starter. Below average production and some unknowns with length. Thus, I'd project as a reserve to backup only.

Ideal Scheme: Man

Projection: Reserve to Backup

Yes	Starter Bench Reps: 4 reps or more	100% of 64 start or more CBs since the 1998 NFL Draft class had at least 4 reps on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jourdan Lewis has a strong long-term starter profile. Above average production and flexibility. He lacks the length, speed, and flexibility to be an elite cornerback. However, he has a solid profile as a zone or slot cornerback. Thus, I'd project as a backup to long-term starter based on his production and flexibility traits.

Ideal Scheme: Zone/Slot

Projection: Backup to Long-term Starter

Yes	Pro Bowl Flexibility Score: 61.19 or higher	85% of multiple Pro Bowl CBs since the 1998 NFL Draft class had a flexibility score of 61.19 or higher
Yes	Starter Flexibility Score: 27.36 or higher	100% of 64 start or more CBs since the 1998 NFL Draft class had a flexibility score of 27.36 or higher
Yes	Starter Bench Reps: 4 reps or more	100% of 64 start or more CBs since the 1998 NFL Draft class had at least 4 reps on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Kevin King hits all the numbers indicative of a multiple Pro Bowl cornerback. However, scheme will be crucial as he has average explosiveness. He's a player who with his elite flexibility can become a dominant press corner. But you want to make sure he's working on wide receivers in close quarters vs. having him explode to the ball in space. How a defensive coordinator schemes him up will be crucial, but in the right system he can be a star.

Ideal Scheme: Any

Projection: Starter to Pro Bowler

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Marlon Humphrey has an uneven data profile. Above average athleticism and solo tackle market share. Everything from a physical standpoint is here with height and length. However, his pass deflection market share is epically low. Which makes Humphrey have more things in common with Stanford Routt and Prince Amukamara than an elite cornerback.

Thus, I'd project Humphrey as a backup to long-term starter only. Because having average pass deflection market share is one thing. But Humphrey has bottom 25 percentile PD market share. That's not a good look for a corner whose living depends on finding the ball and making plays on it. Be cautious is how much you value him in the draft this year.

Ideal Scheme: Any

Projection: Backup to Long-term Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Marshon Lattimore has a long-term starter profile. Near elite explosiveness and elite speed for his size. Lattimore's issues are not participating in the SS/3-Cone to determine flexibility and production. His pass deflection market share is not ideal for an All-Pro let alone Pro Bowl cornerback. Thus, I'd project as a backup to long-term starter with a slight chance to become a Pro Bowler due to age and athleticism traits.

But Lattimore is one of the riskier prospects due to not fully participating in the process along with his production.

Ideal Scheme: Any

Projection: Backup to Pro Bowler

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Quincy Wilson is a very young player with Pro Bowl level athleticism. But that's where the positives end for the most part. Because Wilson has poor solo tackle market share and average pass deflection market share. Wilson is at the age where he could outperform his production data. However, I would still only value as a backup to long-term starter only due to his athleticism not being elite across the board.

Ideal Scheme: Zone/Slot/Press

Projection: Backup to Long-term Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Rasul Douglas has an uncertain data profile. Above average solo tackle market share and flexibility for his size. In addition to great height and length. Douglas fails to impress with below average explosivness, speed and average pass deflection market share. His best fit is a press zone scheme, but his athleticism limits where you can use him.

Ideal Scheme: Zone/Slot/Press

Projection: Backup to Potential Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Shaquill Griffin has a strong profile from a non-Power Five conference. Near elite explosiveness and speed for his size. With great height and length. Griffin misses the mark as an All-Pro prospect due to this solo tackle market share. However, I'd project Griffin as a long-term starter to potential Pro Bowl prospect.

Ideal Scheme: Any

Projection: Starter to Pro Bowler

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Even before the torn ACL, Jones was a very questionable athlete from the combine. Below average in explosiveness, speed, and flexibility for his size. That along with less than All-Pro arm length makes Jones more of a A.J. Bouye type than someone who will develop into an elite cornerback in the NFL. Draft based on his age and production. But it's best to take another look on tape to see if you are missing something with his athleticism for size.

Ideal Scheme: Zone/Slot

Projection: Backup to Potential Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Sojourn Shelton has a decent profile as a slot corner. Above average flexibility for his size with decent pass deflection market share. He misses the mark on numerous quality thresholds due to height, length, and hand size. However, his skill set is classic slot corner due to his flexibility. Put Shelton in the slot or a zone scheme and he could thrive.

Ideal Scheme: Zone/Slot

Projection: Backup to Potential Starter

Yes	Starter Bench Reps: 4 reps or more	100% of 64 start or more CBs since the 1998 NFL Draft class had at least 4 reps on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Teez Tabor has a decent starter profile. Tremendous pass deflection market share and above average flexibility for his size. His biggest issues are not meeting high quality solo tackle market share thresholds. In addition to below average explosiveness and speed. Thus, I'd project Tabor as a backup to long-term starter only.

Ideal Scheme: Zone/Slot

Projection: Backup to Long-term Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Tre White has a solid profile as a long-term starting cornerback. Above average speed, flexibility, and market share production. Everything points to a very good NFL cornerback. But his below average explosiveness, lack of elite speed and only starter level flexibility cap White's upside. Thus, I'd project White as a long-term starter with a slight chance of being a Pro Bowler based on his production profile.

Ideal Scheme: Zone/Slot/Press

Projection: Backup to Long-term Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Xavier Coleman has some impressive athleticism traits. But a lot of unknowns exist in length, hand size and production from the FCS. He has the ideal athleticism for a zone scheme. Where his explosiveness and flexibility can aid in tackling plus getting downhill quickly. But he doesn't have the speed to ever be an amazing man corner. Thus, I'd project as a backup to long-term starter in a zone/press scheme only.

Ideal Scheme: Zone/Slot/Press

Projection: Backup to Long-term Starter

DS

The last position and by far my favorite to evaluate is defensive safety. Full service safeties that can play single high, come down in the box against the run, cover slot receivers in man and still make plays on the football are rare. And even though there is a difference between how elite strong safeties produce vs. elite free safeties, production still matters. Especially in figuring out which safeties are impacting the game in all phases vs. others that are limited in one area or the other. Which is where market share production comes back into the fold with specifically solo tackle, interception, and pass deflection market share.

Solo tackle market share can give perspective on how well a safety is finishing in space and like linebackers, it's a good judge of instincts. A safety is not going to rack up tons of solo tackles by running in the wrong direction of the play. And the same goes for interception market share, which is a good measure of ball hawk ability. Where elite ball hawks like Ed Reed, Earl Thomas, Eric Weddle, and many others scored exceptionally high. But even elite strong safety prototypes like Troy Polamalu and Sean Taylor had significantly high interception market share as well.

In addition to pass deflection market share, which is a great way to gauge the ability to read pass plays and make plays in one v. one situations. Elite free safety types score the highest in pass deflection market share. But again, elite strong safety types weren't slouches in this production measure. Essentially, all production matters at safety and though there are nuances to the position that extend beyond the production differences. Every elite safety over nearly two decades of data scored significantly above average in each of these three metrics.

So, pay attention to market share production at safety, and remember that it is okay to value players who specialize in certain areas of the position. However, finding safeties who can impact the game in all three phases at a very high level is the very definition of elite. We miss and over value safeties when we proclaim only one aspect of the position is necessary for greatness. Ed Reed wasn't just a ball hawk and Polamalu wasn't just a heat seeking ballistic missile. Take care to value every aspect of the position and you will hit more.

Lastly, the topic I wanted to get into briefly before showing the profiles is physical characteristics like height and arm length. Safety continues to be one of those positions like wide receiver where height is not as important as people make it out to be. There have been more elite safeties who are 5'10'' to 5'11'' than 6'1'' or even 6'3'' since the 1998 NFL draft class. Height and arm length thresholds still exist at safety, but most safeties meet the minimum requirements. Don't get too hung on arm length and height if a safety excels in production, and other athleticism measures.

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Anthony Smithson has a solid profile data profile. He has some above average production and athleticism traits. Problems exist in terms of unknown age, below average flexibility, and unsatisfactory pass deflection market share. However, his profile is strong enough to consider as a future starter. Thus, I'd project as a backup to long-term starter only.

Projection: Backup to Long-term Starter

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Budda Baker has a solid long-term starter profile. But he misses the mark in multiple quality thresholds. From below average explosiveness that doesn't meet the minimum Pro Bowl or All-Pro free safety level. To average solo tackle market share and below average interception market share. Baker will be a long-term starting safety, but he falls extremely short with the Earl Thomas, or even Tyrann Mathieu comparisons.

Projection: Backup to Long-term Starter

Yes	Starter Flexibility Score: 23.02 or higher	100% of 64 start or more DS since the 1998 NFL Draft class had a flexibility score of 23.02 or higher
Yes	Starter Bench: 4 reps or more	100% of 64 start or more DS since the 1998 NFL Draft class had 4 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Chidobe Awuzie has an impressive profile as a safety prospect. Elite explosiveness with near elite speed and flexibility. The areas he falls short of All-Pro free safety status is with his INT/PD market share production. However, this profile is indicative of a multiple Pro Bowl level safety. Thus, I'd project as a long-term starter to Pro Bowl caliber player.

Projection: Long-term Starter to Pro Bowler

Yes	Starter Flexibility Score: 23.02 or higher	100% of 64 start or more DS since the 1998 NFL Draft class had a flexibility score of 23.02 or higher
Yes	Starter Bench: 4 reps or more	100% of 64 start or more DS since the 1998 NFL Draft class had 4 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Chuck Clark is the least talked about safety in this class. He has a Pro Bowl caliber profile. From above average athleticism with elite flexibility. To tremendous solo tackle and pass deflection market share production. He falls short in interception market share and few points off in other All-Pro thresholds.

However, Clark with the athleticism of Harrison Smith put up a Pro Bowl to long-term starter profile that should not be ignored on draft day.

Projection: Long-term Starter to Potential Pro Bowler

Yes	Starter Flexibility Score: 23.02 or higher	100% of 64 start or more DS since the 1998 NFL Draft class had a flexibility score of 23.02 or higher
Yes	Starter Bench: 4 reps or more	100% of 64 start or more DS since the 1998 NFL Draft class had 4 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Damarius Travis has a shaky data profile. He has some above average solo tackle and interception traits. But his below average pass deflection market share and athleticism are not ideal. Thus, I'd project as a backup to spot starter only.

Projection: Backup to Long-term Starter

Yes	Starter Flexibility Score: 23.02 or higher	100% of 64 start or more DS since the 1998 NFL Draft class had a flexibility score of 23.02 or higher
Yes	Starter Bench: 4 reps or more	100% of 64 start or more DS since the 1998 NFL Draft class had 4 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Delano Hill has the profile of a potential starter. Elite speed and some above average production qualities. Major issues are related to below average solo tackle and pass deflection market share. In addition to only starter level flexibility for his size. Thus, I'd project as a backup to long-term starter.

Projection: Backup to Long-term Starter

DNP	Starter Bench: 4 reps or more	100% of 64 start or more DS since the 1998 NFL Draft class had 4 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: DeVon Edwards has a decent data profile. Above average production with some above average athleticism traits. Edwards fails based on age to be a high-quality safety. However, there are enough positives in his production to see a potential starter. Thus, I'd project as backup to long-term starter only.

Projection: Backup to Long-term Starter

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Not considering athleticism, Eddie Jackson is very like Delano Hill. But is an older and unhealthy Delano Hill with unknown athleticism similarities. It's hard to project without athleticism. However, based on Jackson's age and production qualities I'd be comfortable saying his highest upside is only as a starter. Thus, I'd project as backup to long-term starter only for Jackson.

Projection: Backup to Long-term Starter

Yes	Starter Bench: 4 reps or more	100% of 64 start or more DS since the 1998 NFL Draft class had 4 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jabrill Peppers has a very interesting data profile. Elite explosiveness and speed. With elite solo tackle and pass deflection market share. But his interception market share is not Pro Bowl level. In addition to not performing the short shuttle or 3-Cone to determine flexibility.

A common concern of many who watched Peppers film including myself. So, what do we have here? We have an explosive speed athlete who is solid at making tackles and forcing dead plays with his pass deflections. But may not have elite abilities to find and capitalize on the ball in the air. How he was used can also play a role here.

However, I would say based on his profile and athletic abilities that are proven I would project as a long-term free safety starter with a slight chance to become a Pro Bowl outlier due to age. He is a unique player with a unique profile. But being unique is not necessarily a bad thing when you have some elite qualities. It just means that the sum of all his parts are more likely to disappoint if you don't start with low expectations.

Projection: Long-term Starter to Potential Pro Bowler

Yes	Starter Flexibility Score: 23.02 or higher	100% of 64 start or more DS since the 1998 NFL Draft class had a flexibility score of 23.02 or higher
Yes	Starter Bench: 4 reps or more	100% of 64 start or more DS since the 1998 NFL Draft class had 4 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jadar Johnson has an uneven data profile. Above average solo tackle market share, speed, and flexibility. He has a good combination of traits to project as a potential long-term starter. But his interception and pass deflection market share are too low to say he'd ever be a quality starter. Thus, I'd project as a backup to long-term starter.

Projection: Backup to Long-term Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jamal Adams has a great profile for NFL success. Above average athleticism to go with above average market share production. Where he falls short is in not having elite athleticism and only starter threshold explosiveness for a strong safety. Nor does Adams have elite level pass deflection market share as free safety. He's the best example of good, not great.

And the bottom-line is elite safeties have elite traits. Adams may be above average across the board. But that doesn't make him elite. He's not a safety I'd consider a top 5 or 10 prospect automatically. Thus, I'd be skeptical of those who push for him that high in this draft class compared to better value at other positions.

Projection: Long-term Starter to Potential Pro Bowler

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: John Johnson has a solid starter profile. Above average athleticism and production. He's off in terms of a few quality thresholds as he doesn't have elite athleticism, or production. But there is enough here to feel good about him as starter. Thus, I'd project as backup to long-term starter only for Johnson.

Projection: Backup to Long-term Starter

No	All-Pro FS PD Market Share Score: 98.47 or Higher	100% of Multiple All-Pro FS since the 1999 NFL Draft Class had an PD market share score of 98.47 or higher
Yes	Pro Bowl SS PD Market Share Score: 53.80 or Higher	100% of Pro Bowl SS since the 1999 NFL Draft Class had an PD market share score of 53.80 or higher
No	Pro Bowl FS PD Market Share Score: 70.91 or Higher	100% of Pro Bowl FS since the 1999 NFL Draft Class had an PD market share score of 70.91 or higher
No	All-Pro SS Arm Length: 33'' or Longer	100% of Multiple All-Pro SS' since the 1998 NFL Draft Class had 33'' or Longer Arm Length
Yes	All-Pro FS Arm Length: 29'' or Longer	100% of Multiple All-Pro FS' since the 1998 NFL Draft Class had 29'' or Longer Arm Length
No	All-Pro SS Explosive Lower Body Strength Score: 91.53 or higher	100% of Multiple All-Pro SS since the 1998 NFL Draft Class had an explosive

		lower body strength score of 91.53 or higher
Yes	All-Pro FS Explosive Lower Body Strength Score: 33.48 or higher	100% of Multiple All-Pro FS since the 1998 NFL Draft Class had an explosive lower body strength score of 33.48 or higher
No	Pro Bowl SS Explosive Lower Body Strength Score: 66.24 or higher	100% of Multiple Pro Bowl SS since the 1998 NFL Draft Class had an explosive lower body strength score of 66.24 or higher
Yes	Pro Bowl FS Explosive Lower Body Strength Score: 33.48 or higher	100% of Multiple Pro Bowl FS since the 1998 NFL Draft Class had an explosive lower body strength score of 33.48 or higher
Yes	Starter Explosive Lower Body Strength Score: 15.46 or higher	100% of 64 start or more DS since the 1998 NFL Draft class had an explosive lower body strength score of 15.46 or higher
No	All-Pro Speed Score: 85.80 or higher	80% of multiple All-Pro DS since the 1998 NFL Draft class had a speed score of 85.80 or higher
No	Pro Bowl Speed Score: 42.12 or higher	100% of multiple DS since the 1998 NFL Draft class had a speed score of 42.12 or higher
No	Starter Speed Score: 23.38 or higher	100% of 64 start or more DS since the 1998 NFL Draft class had a speed score of 23.38 or higher
No	All-Pro and Pro Bowl Flexibility Score: 85.89 or higher	87.5% of multiple All-Pro and Pro Bowl DS since the 1998 NFL Draft class had a flexibility score of 85.89 or higher
Yes	Starter Flexibility Score: 23.02 or higher	100% of 64 start or more DS since the 1998 NFL Draft class had a flexibility score of 23.02 or higher
Yes	Starter Bench: 4 reps or more	100% of 64 start or more DS since the 1998 NFL Draft class had 4 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Jordan Sterns has a poor data profile. He has some above average production and athleticism traits. But his overall production tests are all over the place. Along with not meeting starter threshold speed. Thus, I would project as a reserve to backup only.

Projection: Reserve to Backup

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Josh Jones has an impressive starter profile. Elite explosiveness and speed. With above average production traits across the board. What he lacks is ideal age and has only average flexibility. I'd still project Jones as a long-term starter, but the Pro Bowl potential is less likely at strong or even free safety.

Projection: Backup to Long-term Starter

Yes	Starter Bench: 4 reps or more	100% of 64 start or more DS since the 1998 NFL Draft class had 4 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Malik Golden has some interesting aspects to his profile. Above average explosiveness and speed. But the rest of his profile is below average. From his entire production profile to flexibility. Thus, I'd project Golden as a reserve to backup only.

Projection: Reserve to Backup

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Malik Hooker is one of the hardest prospects to project in this class. Based purely on production and age, he's more of a long-term starter to potential Pro Bowler due to his lack of solo tackle market share. And with no athletic testing or even a bench test. There is no way to verify if he has athletic upside of an All-Pro/Pro Bowler or not. Thus, I'd project as a long-term starter with Pro Bowl potential only.

Projection: Long-term Starter to Pro Bowler

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Marcus Williams has a very impressive data profile with a few inconsistencies. He's an extremely young prospect with above average athleticism and elite interception market share. But it's his other production marks that hurt him a bit. From only adequate solo tackle market share to below average pass deflection market share. Williams has the profile of a good, but not great starter.

Williams profiles the best as Haha Clinton-Dix. A safety who can be impressive with his ability to create turnovers. But will lag in everything else. It will be interesting to track both of their careers to see if they are setting a new standard, or will have short bursts of brilliance followed by huge drops in performance. Thus, I'd project Marcus Williams as a long-term starter to potential Pro Bowl safety based on the similarities to Clinton-Dix.

Projection: Long-term Starter to Pro Bowler

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Montae Nicholson has an uneven metric profile. He has elite speed and above average explosiveness. But his production profile is not getting it done with below average pass deflection market share. And without flexibility or bench press measures. It's hard to project him as anything other than a backup to long-term starter only.

Projection: Backup to Long-term Starter

No	Pro Bowl SS Explosive Lower Body Strength Score: 66.24 or higher	100% of Multiple Pro Bowl SS since the 1998 NFL Draft Class had an explosive lower body strength score of 66.24 or higher
Yes	Pro Bowl FS Explosive Lower Body Strength Score: 33.48 or higher	100% of Multiple Pro Bowl FS since the 1998 NFL Draft Class had an explosive lower body strength score of 33.48 or higher
Yes	Starter Explosive Lower Body Strength Score: 15.46 or higher	100% of 64 start or more DS since the 1998 NFL Draft class had an explosive lower body strength score of 15.46 or higher
No	All-Pro Speed Score: 85.80 or higher	80% of multiple All-Pro DS since the 1998 NFL Draft class had a speed score of 85.80 or higher
Yes	Pro Bowl Speed Score: 42.12 or higher	100% of multiple DS since the 1998 NFL Draft class had a speed score of 42.12 or higher
Yes	Starter Speed Score: 23.38 or higher	100% of 64 start or more DS since the 1998 NFL Draft class had a speed score of 23.38 or higher
No	All-Pro and Pro Bowl Flexibility Score: 85.89 or higher	87.5% of multiple All-Pro and Pro Bowl DS since the 1998 NFL Draft class had a flexibility score of 85.89 or higher
Yes	Starter Flexibility Score: 23.02 or higher	100% of 64 start or more DS since the 1998 NFL Draft class had a flexibility score of 23.02 or higher
Yes	Starter Bench: 4 reps or more	100% of 64 start or more DS since the 1998 NFL Draft class had 4 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Nate Gerry has a solid starter profile. Above average production and speed/flexibility traits. He misses the mark in terms of elite athleticism/production traits. However, his profile overall is very solid. Thus, I'd project as a backup to long-term starter only.

Projection: Backup to Long-term Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: For as explosive and fast Obi Melifonwu is. There are numerous obstacles to projecting him as an All-Pro or even Pro Bowl safety. His age for one is below the threshold for All-Pro and Pro Bowl safeties. In addition to not hitting All-Pro or Pro Bowl level flexibility for his size. So, while Obi has a decent shot of becoming a long-term starter.

Age and even a few production profiles are what separates Melifonwu from being Sean Taylor versus Gerald Sensabaugh.

Projection: Backup to Long-term Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Shalom Luani has a strong profile as a starting safety. Above average production with above average speed and elite flexibility for his size. He did not meet a few elite production marks, and he has below average explosiveness. However, there are enough positives here to see a very good safety in the NFL. Thus, I'd project Luani as a backup to long-term starter only.

Projection: Backup to Long-term Starter

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Tedric Thompson has an uneven data profile. Above average to elite production. But with below average athleticism across the board. There is enough in his production profile to see Thompson as a potential outlier as a starter. Thus, I'd project Thompson as a backup to long-term starter only.

Yes	Pro Bowl SS PD Market Share Score: 53.80 or Higher	100% of Pro Bowl SS since the 1999 NFL Draft Class had an PD market share score of 53.80 or higher
Yes	Pro Bowl FS PD Market Share Score: 70.91 or Higher	100% of Pro Bowl FS since the 1999 NFL Draft Class had an PD market share score of 70.91 or higher
No	All-Pro SS Arm Length: 33'' or Longer	100% of Multiple All-Pro SS' since the 1998 NFL Draft Class had 33'' or Longer Arm Length
Yes	All-Pro FS Arm Length: 29'' or Longer	100% of Multiple All-Pro FS' since the 1998 NFL Draft Class had 29'' or Longer Arm Length
No	All-Pro SS Explosive Lower Body Strength Score: 91.53 or higher	100% of Multiple All-Pro SS since the 1998 NFL Draft Class had an explosive

		lower body strength score of 91.53 or higher
Yes	All-Pro FS Explosive Lower Body Strength Score: 33.48 or higher	100% of Multiple All-Pro FS since the 1998 NFL Draft Class had an explosive lower body strength score of 33.48 or higher
No	Pro Bowl SS Explosive Lower Body Strength Score: 66.24 or higher	100% of Multiple Pro Bowl SS since the 1998 NFL Draft Class had an explosive lower body strength score of 66.24 or higher
Yes	Pro Bowl FS Explosive Lower Body Strength Score: 33.48 or higher	100% of Multiple Pro Bowl FS since the 1998 NFL Draft Class had an explosive lower body strength score of 33.48 or higher
Yes	Starter Explosive Lower Body Strength Score: 15.46 or higher	100% of 64 start or more DS since the 1998 NFL Draft class had an explosive lower body strength score of 15.46 or higher
No	All-Pro Speed Score: 85.80 or higher	80% of multiple All-Pro DS since the 1998 NFL Draft class had a speed score of 85.80 or higher
Yes	Pro Bowl Speed Score: 42.12 or higher	100% of multiple DS since the 1998 NFL Draft class had a speed score of 42.12 or higher
Yes	Starter Speed Score: 23.38 or higher	100% of 64 start or more DS since the 1998 NFL Draft class had a speed score of 23.38 or higher
Yes	All-Pro and Pro Bowl Flexibility Score: 85.89 or higher	87.5% of multiple All-Pro and Pro Bowl DS since the 1998 NFL Draft class had a flexibility score of 85.89 or higher
Yes	Starter Flexibility Score: 23.02 or higher	100% of 64 start or more DS since the 1998 NFL Draft class had a flexibility score of 23.02 or higher
Yes	Starter Bench: 4 reps or more	100% of 64 start or more DS since the 1998 NFL Draft class had 4 reps or more on the bench press

*MSA Rating: The average score of a prospect's market share production, strength of schedule and age percentile scores

*Explosive Lower Body Strength Score: A score formulated from a prospect's vertical, broad jump and mass density measured against all his positional peers since 1998.

*Speed Score: A score formulated from a prospect's 40-yard dash and mass density measured against all his positional peers since 1998.

*Flexibility Score: A score formulated from a prospect's short shuttle, 3-Cone and mass density measured against all his positional peers since 1998.

Metric Analysis: Xavier Woods has a very strong profile from a non-Power five conference. Solid solo tackle market share with elite interception and pass deflection market share. With Pro Bowl level athleticism across the board. Woods hits about every mark you want from a player at his level of competition. Thus, I'd project as long-term starter to multiple Pro Bowl safety at the next level

Projection: Long-term Starter to Pro Bowler

Projection: Reserve to Backup

Metric Big Board

Just like last year's draft guide, I added a big board based entirely on numbers. The prospects who check the most data boxes are ranked higher than those ranked lower. It should not be seen how I personally believe the outcomes will be. However, it should give you an idea of who has a higher statistical chance of success. And if you saw the board from last year, then you should know just how accurate this type of approach can be.

Especially at identifying the busts. Thank you again for your purchase. If you would like a more film based analysis, you can go to my blog draftcobern@wordpress.com. I posted over 1,000 film grades this season. Just type a prospect's name in the search box, and I've likely done a post on him.

And without further ado enjoy the metric big board below.

Name	Pos	Metric Score
DeShaun Watson	QB	1
